imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

14 Gbps, DUAL D-TYPE FLIP-FLOP WTH COMMON CLOCK & PROGRAMMABLE OUTPUT VOLTAGE

Typical Applications

The HMC953LC4B is ideal for:

- 16G Fiber Channel
- Serial Data Transmission up to 14 Gbps
- Digital Logic Systems up to 14 GHz
- Matched Delay Applications
- Broadband Test & Measurement

Functional Diagram

Features

Supports High Data Rates: up to 14 Gbps Differential or Single-Ended Operation Fast Rise and Fall Times: 22 / 20 ps Low Power Consumption: 442 mW typ. Programmable Differential Output Voltage Swing: 600 - 1300 mVp-p Propagation Delay: 104 ps Single Supply: -3.3 V 24 Lead Ceramic 4x4 mm SMT Package: 16 mm²

General Description

The HMC953LC4B is a Differential Dual D-Type Flip Flop with a common clock to support data transmission rates of up to 14 Gbps, and clock port operation of up to 14 GHz. During normal operation, dual differential data is transferred to the respective outputs on the positive edge of the clock. Reversing the clock inputs allows for negative-edge triggered applications. The HMC953LC4B also features an output level control pin, VR, which allows for loss compensation or for signal level optimization.

All differential input signals to the HMC953LC4B are terminated with 50 Ohms to ground on-chip, and may be either AC or DC coupled. The outputs of the HMC953LC4B may be operated either differentially or single-ended. Outputs can be connected directly to a 50 Ohm terminated system, while DC blocking capacitors may be used if the terminating system is 50 Ohms to a non-ground DC voltage. The HMC-953LC4B operates from a single -3.3 V DC supply and is available in a ceramic RoHS-compliant 4x4 mm SMT package.

Parameter	Conditions	Min.	Тур.	Max	Units
Power Supply Voltage		-3.6	-3.3	-3.0	V
Power Supply Current			134		mA
Maximum Data Rate			14		Gbps
Maximum Select Rate			14		GHz
Input Voltage Range		-1.5		0.5	V
Input Differential Range		0.1		2.0	Vp-p
Input Return Loss	Frequency <11 GHz		10		dB
	Single-Ended, peak-to-peak		580		mVp-p
Output Amplitude	Differential, peak-to-peak		1160		mVp-p

Electrical Specifications, T_A = +25 °C, Vee = -3.3 V

Pin Descriptions

Pin Number	Function	Description	Interface Schematic
1, 6, 8, 11, 13, 18	GND	Signal Grounds.	
2, 3, 4, 5	D1P, D1N, D2P, D2N	Differential Inputs: Current Mode Logic (CML) referenced to positive supply.	GND O GND DXP O DXN
7, 12, 22	N/C	No connection necessary. These pins may be connected to RF/DC ground without affecting performance.	
9, 10	CP, CN	Differential Clock Inputs: Current Mode Logic (CML) referenced to positive supply.	GND O GND CP O CN
14, 15, 16, 17	Q2N, Q2P, Q1N, Q1P	Differential Outputs: Current Mode Logic (CML) referenced to positive supply.	GND QXPO QXPO QXPO QXN
19, 24	GND	Supply Ground	
20, 23 Package Base	Vee	These pins and the exposed paddle must be connected to the negative voltage supply.	
21	VR	Output level control. Output level may be increased or decreased by applying a voltage to VR per "Output Differential vs. VR" plot.	VR 0

Evaluation PCB

List of Materials for Evaluation PCB 126572 ^[1]

Item	Description	
J1 - J10	PCB Mount SMA RF Connectors	
J15 - J18	DC Pin	
JP1	0.1" Header with Shorting Jumper	
C1, C2	4.7 µF Capacitor, Tantalum	
C3 - C5	100 pF Capacitor, 0603 Pkg.	
R1	10 Ohm Resistor, 0603 Pkg.	
U1	HMC953LC4B Dual D-Type Flip Flop	
PCB ^[2]	126570 Evaluation Board	

Reference this number when ordering complete evaluation PCB
Circuit Board Material: Arlon 25FR or Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. The exposed package base should be connected to Vee. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request. Install jumper on JP1 to short VR to GND for normal operation.
