

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## HTF3000LF – Temperature and Relative Humidity Module

- Small size product
- Compliant with RoHS recommendations and most of Lead Free Soldering Process
- Humidity calibrated within  $\pm 3\%$  @55%RH at 5Vdc
- Stable, proportional frequency output from 0 to 100% RH
- High quality thermistor

### DESCRIPTION

Based on the rugged HS1101LF humidity sensor, HTF3000LF is a dedicated humidity and temperature transducer designed for OEM applications where a reliable and accurate measurement is needed. It features a very small size for easy, cost-effective mechanical mounting. Direct interface with a micro-controller is made possible with the module's linear frequency output.

### FEATURES

- |   |  |
|---|--|
| <ul style="list-style-type: none"> <li>• One of the smallest humidity/temperature modules on the market</li> <li>• High reliability and long term stability</li> <li>• Not affected by water immersion</li> <li>• Stable characteristics with temperature</li> <li>• Part could be washed with distilled water</li> </ul> | <p><b><i>Humidity Sensor Specific Features</i></b></p> <ul style="list-style-type: none"> <li>• Instantaneous de-saturation after long periods in saturation phase</li> <li>• Fast response time</li> <li>• High resistance to chemicals</li> <li>• Patented solid polymer structure</li> </ul> <p><b><i>Temperature Sensor Specific Features</i></b></p> <ul style="list-style-type: none"> <li>• 10k<math>\Omega</math> <math>\pm 1\%</math> NTC temperature sensor</li> <li>• Stable</li> <li>• High sensitivity</li> </ul> |
|---|--|

### APPLICATIONS

- Printers
- HVAC controller

...

# HTF3000LF - Temperature and Relative Humidity Module

## PERFORMANCE SPECS

### MAXIMUM RATINGS

Ratings	Symbol	Value	Unit
Storage Temperature	Tstg	-40 to 105	°C
Storage Humidity	RHstg	0 to 100	% RH
Supply Voltage (Peak)	Vs	16	Vdc
Humidity Operating Range	RH	0 to 100	% RH
Temperature Operating Range	Ta	-40 to 85	°C

**Peak conditions:** less than 10% of the operating time.

### ELECTRICAL CHARACTERISTICS

(Ta=23°C, Vs=5Vdc +/-5%, RL>1MΩ unless otherwise stated)

Humidity Characteristics	Symbol	Min	Typ	Max	Unit
Humidity Measuring Range	RH	0		100	%RH
Relative Humidity Accuracy (0 to 100% RH)	RH	Refer to Chart 2 on page 3			%RH
Supply Voltage	Vs	3	5	8	Vdc
Nominal Output @55%RH (at 5Vdc)	Fout	6560	6600	6640	Hz
Current consumption (Max at 16Vdc)	Ic		0.18	1	mA
Supply Voltage Influence (3 to 7Vdc)	RH		+/-1		% RH
Average Sensitivity from 10% to 95%RH	$\Delta F_{out}/\Delta RH$	-10	-12	-14	Hz/%RH
Humidity Hysteresis				+/-1	%RH
Long Term Stability	T		+/-0.5		%RH/yr
Time Constant (at 63% of signal, static) 40% to 95%RH, 2m/s	$\tau$			10	s

(Ta=25°C)

Temperature Characteristics	Symbol	Min	Typ	Max	Unit
Nominal Resistance @25°C	R		10		kΩ
Beta value: B25/100	$\beta$	3346	3380	3413	
Temperature Measuring Range	Ta	-40		85	°C
Nominal Resistance Tolerance @25°C	R <sub>N</sub>		1		%
Beta Value Tolerance	$\beta$		1		%
Response Time	$\tau$		10		s

## HTF3000LF - Temperature and Relative Humidity Module

### TYPICAL PERFORMANCE CURVES

#### HUMIDITY SENSOR

- Relative Humidity Accuracy of HTF3000LF @23°C

- Modeled Signal Output Equations

$$F_{out} = 7314 - 16.79 \cdot RH + 0.0886 \cdot RH^2 - 0.000358 \cdot RH^3$$

$F_{out}$  in Hz and RH in %

- Modeled Reversed Output Equations

$$RH = 89.8 \cdot 10^{-10} \cdot F_{out}^3 - 15.7486 \cdot 10^{-5} \cdot F_{out}^2 + 0.80945 \cdot F_{out} - 1009$$

$F_{out}$  in Hz and RH in %

- Typical response look-up table

RH (%)	1	5	10	15	20	25	30	35	40	45	50
Fout (Hz)	7295	7230	7155	7080	7010	6945	6880	6820	6760	6705	6650
RH (%)	55	60	65	70	75	80	85	90	95	99	
Fout (Hz)	6600	6550	6500	6450	6400	6355	6305	6260	6210	6170	

Output Voltage wave form

## HTF3000LF - Temperature and Relative Humidity Module

- Temperature influence on HTF3000LF humidity measurement

Calibration data are traceable to NIST standards through CETIAT laboratory.

For demanding application, temperature coefficient could be compensated over operating temperature range using following formula:

$$\begin{aligned} RH_{\text{corr}} &= RH + 0.08 * (T - 25) \\ F_{\text{out corr}} &= F_{\text{out}} - 0.88 * (T - 25) \\ T \text{ in } ^\circ\text{C}, RH \text{ in } \%, F_{\text{out}} \text{ in } Hz \end{aligned}$$

### TEMPERATURE SENSOR

- Typical temperature output

Depending on the needed temperature measurement range and associated accuracy, we suggest two methods to access to the NTC resistance values.

$$R_T = R_N * e^{\beta \left( \frac{1}{T} - \frac{1}{T_N} \right)}$$

$R_T$	NTC resistance in $\Omega$ at temperature T in K
$R_N$	NTC resistance in $\Omega$ at rated temperature T in K
T, $T_N$	Temperature in K
$\beta$	Beta value, material specific constant of NTC
e	Base of natural logarithm (e=2.71828)

① The exponential relation only roughly describes the actual characteristic of an NTC thermistor can, however, as the material parameter  $\beta$  in reality also depend on temperature. So this approach is suitable for describing a restricted range around the rated temperature or resistance with sufficient accuracy.

② For practical applications, a more precise description of the real R/T curve may be required. Either more complicated approaches (e.g. the Steinhart-Hart equation) are used or the resistance/temperature relation as given in tabulation form. The below table has been experimentally determined with utmost accuracy for temperature increments of 1 degree.

Actual values may also be influenced by inherent self-heating properties of NTCs. Please refer to MEAS-France Application Note HPC106-0 "Low power NTC measurement".

## HTF3000LF - Temperature and Relative Humidity Module

### QUALIFICATION PROCESS

#### RESISTANCE TO PHYSICAL AND CHEMICAL STRESSES

- HTF3000LF has passed through qualification processes of MEAS-France including vibration, shock, storage, high temperature and humidity.
- Additional tests under harsh chemical conditions demonstrate good operation in presence of salt atmosphere, SO<sub>2</sub> (0.5%), H<sub>2</sub>S (0.5%), O<sub>3</sub>, NO<sub>x</sub>, NO, CO, CO<sub>2</sub>, Softener, Soap, Toluene, acids (H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl), HMDS, Insecticide, Cigarette smoke, this is not an exhaustive list.
- ESD: HTF3000LF is able to sustain a minimum of +/-8kV (contact discharge).

### PACKAGE OUTLINE
