

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## SMT LED Surface Mount LED Indicator

### Data Sheet

### Description

Broadcom Power PLCC-4 is an extension of our PLCC2 SMT LEDs. The package can be driven at higher current due to its superior package design. The product is able to dissipate heat more efficiently compared to the conventional PLCC-2 SMT LEDs. In proportion to the increase in driving current, this family of LEDs is able to produce higher light output compared to the conventional PLCC-2 SMT LEDs.

These SMT LEDs have higher reliability and better performance and are designed to work under a wide range of environmental conditions. This higher reliability makes them suitable for use under harsh environment and conditions like automotive. In addition, they are also suitable to be used in electronic signs and signals.

To facilitate easy pick and place assembly, the LEDs are packed in EIA-compliant tape and reel. Every reel will be shipped in single intensity and color bin (except for red color), to provide close uniformity.

These LEDs are compatible with IR solder reflow process. Due to the high reliability feature of these products, they also can be mounted using through-the-wave soldering process.

There are a variety of colors and various viewing angles (30°, 60°, and 120°) available in these SMT LEDs. Ideally, the 30° parts are suitable for light piping where focused intensities are required. As for the 60° and 120°, they are most suitable for automotive interior and exterior lighting and electronic signs applications.

### Features

- Industry standard PLCC-4
- High reliability LED package
- High brightness using AlInGaP and InGaN dice technologies

- High optical efficiency
- Higher ambient temperature at the same current possible compared to PLCC-2
- Available in full selection of colors
- Super wide viewing angle at 120°
- Available in 8mm carrier tape on 7-inch reel
- Compatible with both IR and TTW soldering process
- JEDEC MSL 2a
- High reliability LED package due to enhanced silicone resin material for InGaN family

### Applications

- Interior automotive
  - Instrument panel backlighting
  - Central console backlighting
  - Cabin backlighting
  - Navigation and audio system
  - Dome lighting
  - Push button backlighting
- Exterior automotive
  - Turn signals
  - CHMSL
  - Rear combination lamp
  - Puddle light
- Electronic signs and signals
  - Interior full color sign
  - Variable message sign
- Office automation, home appliances, industrial equipment
  - Front panel backlighting
  - Push button backlighting
  - Display backlighting

**Figure 1 Package Dimensions**

**NOTE** All dimensions in millimeters. Electrical connection between all cathodes is recommended.

## Device Selection Guide

Color	Part Number	Min. $I_V$ (mcd) <sup>a</sup>	Max. $I_V$ (mcd)	Test Current (mA)	Dice Technology
Red	HSMC-A400-S30M1	180.00	355.00	50	AlInGaP
	HSMC-A401-U80M1	560.00	1400.00	50	AlInGaP
Red Orange	HSMJ-A401-T40M1	285.00	715.00	50	AlInGaP
	HSMJ-A401-U40M1	450.00	1125.00	50	AlInGaP
Orange	HSML-A401-U40M1	450.00	1125.00	50	AlInGaP
Amber	HSMA-A401-U45M1	450.00	1125.00	50	AlInGaP
Emerald Green	HSME-A401-P4PM1	45.00	112.50	50	AlInGaP
Blue	HSMN-A400-S8QM2	224.00	560.00	30	InGaN
	HSMN-A400-S8PM2	224.00	560.00	30	InGaN
	HSMN-A400-S4QM2	180.00	450.00	30	InGaN
Green	HSMM-A400-W8QM2	1400.00	3550.00	30	InGaN
	HSMM-A400-W8YM2	1400.00	3550.00	30	InGaN

a. The luminous intensity  $I_V$  is measured at the mechanical axis of the lamp package. The actual peak of the spatial radiation pattern may not be aligned with this axis.  $I_V$  tolerance =  $\pm 12\%$ .

## Part Numbering System

## Absolute Maximum Ratings (T<sub>A</sub> = 25°C)

Parameters	HSMC/J/L/A/E	HSMZ/V/U	HSMM/N
DC Forward Current <sup>a</sup>	70 mA <sup>b c</sup>	70 mA <sup>b c</sup>	30 mA
Peak Forward Current <sup>d</sup>	200 mA	200 mA	90 mA
Power Dissipation	180 mW	240 mW	114 mW
Reverse Voltage	—	5V	—
Junction Temperature	—	110°C	—
Operating Temperature	—	–40°C to +100°C	—
Storage Temperature	—	–40°C to +100°C	—

- Derate linearly as shown in figure 5.
- Drive current between 10 mA and 70 mA is recommended for best long-term performance.
- Operation at currents below 5 mA is not recommended.
- Duty factor = 10%, Frequency = 1 kHz.

## Optical Characteristics (T<sub>A</sub> = 25°C)

Color	Part Number	Peak Wavelength $\lambda_{PEAK}$ (nm) Typ.	Dominant Wavelength $\lambda_D^a$ (nm) Typ.	Viewing Angle $2\Theta_{1/2}^b$ (Degrees) Typ.	Luminous Efficacy $\eta_V^c$ (lm/W) Typ.	Luminous Intensity/Total Flux $I_V$ (mcd)/ $\Phi_V$ (lm) Typ.
Red	HSMC	635	626	120	150	0.45
	HSMZ	639	630	120	155	0.45
Red Orange	HSMJ	621	615	120	240	0.45
	HSMV	623	617	120	263	0.45
Orange	HSML	609	605	120	320	0.45
Amber	HSMA	592	590	120	480	0.45
	HSMU	594	592	120	500	0.45
Yellow Green	HSME	576	575	120	560	0.45
Emerald Green	HSME	568	567	120	610	0.45
Green	HSMM	518	525	120	500	0.45
Blue	HSMN	468	470	120	75	0.45

- The dominant wavelength,  $\lambda_D$ , is derived from the CIE Chromaticity Diagram and represents the color of the device.
- $\Theta_{1/2}$  is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
- Radiant intensity,  $I_e$  in watts/steradian, may be calculated from the equation  $I_e = I_V/\eta_V$ , where  $I_V$  is the luminous intensity in candelas and  $\eta_V$  is the luminous efficacy in lumens/watt.

## Electrical Characteristics (T<sub>A</sub> = 25°C)

Part Number	Forward Voltage $V_F$ (Volts) at $I_F = 50$ mA		Reverse Voltage $V_R$ at 100 $\mu$ A
	Typ.	Max.	Min.
HSMC/J/L/A/E	2.2	2.5	5
HSMZ/V/U	2.8	3.4	5
Part Number	Forward Voltage $V_F$ (Volts) at $I_F = 30$ mA		Reverse Voltage $V_R$ at 10 $\mu$ A
	Typ.	Max.	Min.
HSMM/N	3.8	4.6	5

## Bin Information

### Intensity Bin Select ( $X_5X_6$ )

Individual reel will contain parts from one half bin only.

$X_5$	Min. $I_V$ Bin
$X_6$	
0	Full Distribution
2	2 half bins starting from $X_51$
3	3 half bins starting from $X_51$
4	4 half bins starting from $X_51$
5	5 half bins starting from $X_51$
6	2 half bins starting from $X_52$
7	3 half bins starting from $X_52$
8	4 half bins starting from $X_52$
9	5 half bins starting from $X_52$

### Intensity Bin Limits

Bin ID	Min. (mcd)	Max. (mcd)
N1	28.50	35.50
N2	35.50	45.00
P1	45.00	56.00
P2	56.00	71.50
Q1	71.50	90.00
Q2	90.00	112.50
R1	112.50	140.00
R2	140.00	180.00
S1	180.00	224.00
S2	224.00	285.00
T1	285.00	355.00
T2	355.00	450.00
U1	450.00	560.00
U2	560.00	715.00
V1	715.00	900.00
V2	900.00	1125.00
W1	1125.00	1400.00
W2	1400.00	1800.00
X1	1800.00	2240.00
X2	2240.00	2850.00
Y1	2850.00	3550.00
Y2	3550.00	4500.00
Z1	4500.00	5600.00
Z2	5600.00	7150.00
11	7150.00	9000.00
12	9000.00	11250.00

## Color Bin Select (X<sub>7</sub>)

Individual reel will contain parts from one half bin only.

X <sub>7</sub>	
0	Full Distribution
Z	A and B only
Y	B and C only
W	C and D only
V	D and E only
U	E and F only
T	F and G only
S	G and H only
Q	A, B, and C only
P	B, C, and D only
N	C, D, and E only
M	D, E, and F only
L	E, F, and G only
K	F, G, and H, only
1	A, B, C, and D only
2	E, F, G, and H only
3	B, C, D, and E only
4	C, D, E, and F only
5	A, B, C, D, and E only
6	B, C, D, E, and F only

## Color Bin Limits

Blue	Min. (nm)	Max. (nm)
A	460.0	465.0
B	465.0	470.0
C	470.0	475.0
D	475.0	480.0

Green	Min. (nm)	Max. (nm)
A	515.0	520.0
B	520.0	525.0
C	525.0	530.0
D	530.0	535.0

Emerald Green	Min. (nm)	Max. (nm)
A	552.5	555.5
B	555.5	558.5
C	558.5	561.5
D	561.5	564.5

Yellow Green	Min. (nm)	Max. (nm)
A	564.5	567.5
B	567.5	570.5
C	570.5	573.5
D	573.5	576.5

Amber/Yellow	Min. (nm)	Max. (nm)
A	582.0	584.5
B	584.5	587.0
C	587.0	589.5
D	589.5	592.0
E	592.0	594.5
F	594.5	597.0

Orange	Min. (nm)	Max. (nm)
A	597.0	600.0
B	600.0	603.0
C	603.0	606.0
D	606.0	609.0
E	609.0	612.0

Red Orange	Min. (nm)	Max. (nm)
A	611.0	616.0
B	616.0	620.0

Red	Min. (nm)	Max. (nm)
Full Distribution		

**NOTE** Tolerance of each bin limit =  $\pm 1$  nm.

## Forward Voltage Bin Table

For HSMZ/V/U – A4xx-xxxxx only.

Bin	Min.	Max.
VA	1.9	2.2
VB	2.2	2.5
VC	2.5	2.8
VD	2.8	3.1
VE	3.1	3.4

## Precautionary Notes

### Handling Precautions

The encapsulation material of the LED is made of silicone for better product reliability. Compared to epoxy encapsulant that is hard and brittle, silicone is softer and flexible. Special handling precautions need to be observed during assembly of silicone encapsulated LED products. Failure to comply might lead to damage and premature failure of the LED. Refer to Application Note AN5288, Silicone Encapsulation for LED: Advantages and Handling Precautions for additional information.

1. Do not poke sharp objects into the silicone encapsulant. Sharp object like tweezers or syringes might apply excessive force or even pierce through the silicone and induce failures to the LED die or wire bond.
2. Do not touch the silicone encapsulant. Uncontrolled force acting on the silicone encapsulant might result in excessive stress on the wire bond. The LED should only be held by the body.
3. Do not stack assembled PCBs together. Use an appropriate rack to hold the PCBs.
4. Surface of silicone material attracts dust and dirt easier than epoxy due to its surface tackiness. To remove foreign particles on the surface of silicone, a cotton bud can be used with isopropyl alcohol (IPA). During cleaning, rub the surface gently without putting much pressure on the silicone. Ultrasonic cleaning is not recommended.
5. For automated pick and place, Broadcom has tested nozzle size below to be working fine with this LED. However, due to the possibility of variations in other parameters such as pick and place machine maker/model and other settings of the machine, customer is recommended to verify the nozzle selected will not cause damage to the LED.

### Handling of Moisture Sensitive Device

This product has a Moisture Sensitive Level 2 rating per JEDEC J-STD-020. Refer to Application Note AN5305, Handling of Moisture Sensitive Surface Mount Devices, for additional details and a review of proper handling procedures.

1. Before use  
An unopened moisture barrier bag (MBB) can be stored at  $<40^{\circ}\text{C}/90\%\text{RH}$  for 12 months. If the actual shelf life has exceeded 12 months and the humidity Indicator Card (HIC) indicates that baking is not required, then it is safe to reflow the LEDs per the original MSL rating.  
It is recommended that the MBB not be opened prior to assembly (IQC for example).
2. Control after opening the MBB  
The humidity indicator card (HIC) shall be read immediately upon opening of MBB.  
The LEDs must be kept at  $<30^{\circ}\text{C}/60\%\text{RH}$  at all times and all high temperature related processes including soldering, curing or rework need to be completed within 672 hours.
3. Control for unfinished reel  
Unused LEDs must be stored in a sealed MBB with desiccant or desiccator at  $<5\%\text{RH}$ .
4. Control of assembled boards  
If the PCB soldered with the LEDs is to be subjected to other high temperature processes, the PCB need to be stored in sealed MBB with desiccant or desiccator at  $<5\%\text{RH}$  to ensure that all LEDs have not exceeded their floor life of 672 hours.
5. Baking is required if:  
The HIC indicator is not BROWN at 10% and is AZURE at 5%.  
The LEDs are exposed to condition of  $>30^{\circ}\text{C}/60\%\text{RH}$  at any time.  
The LED floor life exceeded 168hrs. The recommended baking condition is:  $60\pm5^{\circ}\text{C}$  for 20hrs.  
Baking should only be done once.

## 6. Storage

The soldering terminals of these Broadcom LEDs are silver plated. If the LEDs are being exposed in ambient environment for too long, the silver plating might be oxidized and thus affecting its solderability performance. As such, unused LEDs must be kept in sealed MBB with desiccant or in desiccator at <5%RH.

## Application Precautions

1. Drive current of the LED must not exceed the maximum allowable limit across temperature as stated in the data sheet. Constant current driving is recommended to ensure consistent performance.
2. LEDs do exhibit slightly different characteristics at different drive current which might result in larger variation their performance (meaning intensity, wavelength, and forward voltage). User is recommended to set the application current as close as possible to the test current in order to minimize these variations.
3. LED is not intended for reverse bias. Do use other appropriate components for such purpose. When driving the LED in matrix form, it is crucial to ensure that the reverse bias voltage is not exceeding the allowable limit of the LED.
4. Do not use the LED in the vicinity of material with sulfur content, in environment of high gaseous sulfur compound and corrosive elements. Examples of material that may contain sulfur are rubber gasket, RTV (room temperature vulcanizing) silicone rubber, rubber gloves etc. Prolonged exposure to such environment may affect the optical characteristics and product life.
5. Avoid rapid change in ambient temperature especially in high humidity environment as this will cause condensation on the LED.
6. Although the LED is rated as IPx6 according to IEC60529: Degree of protection provided by enclosure, the test condition may not represent actual exposure during application. If the LED is intended to be used in outdoor or harsh environment, the LED must be protected against damages caused by rain water, dust, oil, corrosive gases, external mechanical stress etc.

## Thermal Management

Optical, electrical and reliability characteristics of LED are affected by temperature. The junction temperature ( $T_J$ ) of the LED must be kept below allowable limit at all times.  $T_J$  can be calculated as below:

$$T_J = T_A + R_{\theta J-A} \times I_F \times V_{Fmax}$$

where;

$T_A$  = ambient temperature [ $^{\circ}\text{C}$ ]

$R_{\theta J-A}$  = thermal resistance from LED junction to ambient [ $^{\circ}\text{C}/\text{W}$ ]

$I_F$  = forward current [A]

$V_{Fmax}$  = maximum forward voltage [V]

The complication of using this formula lies in  $T_A$  and  $R_{\theta J-A}$ . Actual  $T_A$  is sometimes subjective and hard to determine.  $R_{\theta J-A}$  varies from system to system depending on design and is usually not known.

Another way of calculating  $T_J$  is by using solder point temperature  $T_S$  as shown below:

$$T_J = T_S + R_{\theta J-S} \times I_F \times V_{Fmax}$$

where;

$T_S$  = LED solder point temperature as shown in illustration below [ $^{\circ}\text{C}$ ]

$R_{\theta J-S}$  = thermal resistance from junction to solder point [ $^{\circ}\text{C}/\text{W}$ ]

$T_S$  can be measured easily by mounting a thermocouple on the soldering joint as shown in illustration above, while  $R_{\theta J-S}$  is provided in the data sheet. User is advised to verify the  $T_S$  of the LED in the final product to ensure that the LEDs are operated within all maximum ratings stated in the data sheet.

## Eye Safety Precautions

LEDs may pose optical hazards when in operation. It is not advisable to view directly at operating LEDs as it may be harmful to the eyes. For safety reasons, use appropriate shielding or personal protective equipments.
