Description

These chip-type LEDs utilize Aluminum Indium Gallium Phosphide (AlInGaP) material technology. The AlInGaP material has a very high luminous efficiency, capable of producing high light output over a wide range of drive currents. The available colors in this surface mount series are 592 nm Amber, 605 nm Orange, 626/631 nm Red for AS AlInGaP.

All packages are binned by both color and intensity, except for red color.

These ChipLEDs come either in two top emitting packages (HSMx-C170/C190/C191/C150) or in a side emitting package (HSMx-C110). The right angle ChipLEDs are suitable for applications such as LCD backlighting. The top emitting ChipLEDs with wide viewing angle are suitable for light piping and direct backlighting of keypads and panels. In order to facilitate pick and place operation, these ChipLEDs are shipped in tape and reel, with 4000 units per reel for HSMx-C170/C190/C191 and 3000 units per reel for HSMx-C110/C150.

These packages are compatible with IR soldering process.

Notes:

1. The luminous intensity, I_v , is measured at the peak of the spatial radiation pattern which may not be aligned with the mechanical axis of the lamp package.
2. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
3. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
