## HSMN-C110/C120/C150/C170/C190/C191

### SMT ChipLEDs

## Data Sheet

### Description

These small chip-type LEDs utilize high efficient InGaN/SiC material to deliver competitively priced high performance blue and green. These 525 nm green and 470 nm blue are unique hues which provide color differentiation to a product.

These ChipLEDs come in either top emitting packages (HSMx-C170, C190, C191, and C150) or in a side emitting package (HSMx-C110 and HSMx-C120). The side emitting package is especially suitable for LCD backlighting application. The top emitting packages with their wide viewing angle are suitable for direct backlighting application or being used with light pipes. In order to facilitate pick and place operation, these ChipLEDs are shipped in tape and reel with 4000 units per reel for HSMx-C120, C170, C190, and C191 packages, and 3000 units per reel for HSMx-C110 and C150 packages. All packages are compatible with IR soldering and binned by both color and intensity.

### Notes:

1. The luminous intensity,  $I_v$ , is measured at the peak of the spatial radiation pattern which may not be aligned with the mechanical axis of the lamp package.
2. The dominant wavelength,  $\lambda_d$ , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.
3.  $\theta_{1/2}$  is the off-axis angle where the luminous intensity is 1/2 the peak intensity.
