HSTL16919

FEATURES

- Inputs meet JEDEC HSTL Std. JESD 8–6, and outputs meet Level III specifications
- 12k Ω pull-up on D and $\overline{LE}$ inputs
- ESD classification testing is done to JEDEC Standard JESD22. Protection exceeds 2000 V to HBM per method A114.
- Latch-up testing is done to JEDEC Standard JESD78, which exceeds 100 mA.
- Packaged in 48-pin plastic thin shrink small outline package (TSSOP48)

DESCRIPTION

The HSTL16919 is a 9-bit to 18-bit D-type latch designed for 3.15 to 3.45 V V_{CC} operation. The D inputs accept HSTL levels and the Q outputs provide LVTTL levels.

The HSTL16919 is particularly suitable for driving an address bus to two banks of memory. Each bank of nine outputs is controlled with its own latch-enable ($\overline{LE}$) input.

Each of the nine D inputs is tied to the inputs of two D-type latches that provide true data (Q) at the outputs. While $\overline{LE}$ is LOW the Q outputs of the corresponding nine latches follow the D inputs. When $\overline{LE}$ is taken HIGH, the Q outputs are latched at the levels set up at the D inputs.

The HSTL16919 is characterized for operation from 0 to +70 °C.
