Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

250V Low Charge Injection, 8-Channel, High Voltage Analog Switch

Features

- HVCMOS® technology for high performance
- Very low quiescent power dissipation (-10µA)
- Low parasitic capacitances
- DC to 50MHz small signal frequency response
- -60dB typical output off isolation at 5.0MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- On-chip shift register, latch and clear logic circuitry
- Flexible high voltage supplies
- Surface mount packages

Applications

- Medical ultrasound imaging
- Non-destructive evaluation
- Inkjet printer heads
- Optical MEMS modules

General Description

The Supertex HV214 is a low charge injection, 8-channel, high voltage, analog switch integrated circuit (IC) intended for use in applications requiring high voltage switching controlled by low voltage control signals, such as medical ultrasound imaging, piezoelectric transducer drivers, inkjet printer heads and optical MEMS modules.

Input data is shifted into an 8-bit shift register that can then be retained in an 8-bit latch. To reduce any possible clock feedthrough noise, the latch enable bar should be left high until all bits are clocked in. Data are clocked in during the rising edge of the clock. Using HVCMOS® technology, this device combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

The device is suitable for various combinations of high voltage supplies, e.g., V_{PP}/V_{NN}: +40V/-210V, +125V/-125V, +210V/-40V.

Absolute Maximum Ratings

Parameter	Value
V_{DD} logic power supply voltage	-0.5V to +15V
V_{PP} - V_{NN} supply voltage	260V
V_{PP} positive high voltage supply	-0.5V to V_{NN} +250V
V_{NN} negative high voltage supply	+0.5V to -260V
Logic input voltages	-0.5V to V_{DD} +0.3V
Analog signal range	V_{NN} to V_{PP}
Peak analog signal current/channel	2.5A
Storage temperature	-65°C to +150°C
Power dissipation: 48-Lead LQFP 28-Lead PLCC	 1.0W 1.2W

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Operating Conditions

Sym	Parameter	Value
V_{DD}	Logic power supply voltage	4.5V to 13.2V
V_{PP}	Positive high voltage supply	40V to V_{NN} +250V

Power Up/Down Sequence:

1. Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.
2. V_{SIG} must be $V_{NN} \le V_{SIG} \le V_{PP}$ or floating during power up/down transistion.
3. Rise and fall times of power supplies V_{DD}, V_{PP}, and V_{NN} should not be less than 1.0msec.

Notes:

1. *The eight switches operate independently.*
2. *Serial data is clocked in on the L→H transition CLK.*
3. *The switches go to a state retaining their present condition at the rising edge of $\overline{LE}$. When $\overline{LE}$ is low the shift register data flows through the latch.*
4. *D_{OUT} is high when data in the shift register 7 is high.*
5. *Shift register clocking has no effect on the switch states if $\overline{LE}$ is H.*
6. *The clear input overrides all other inputs.*
