## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# 200V Low Charge Injection 8-Channel High Voltage Analog Switch 

## Features

- HVCMOS ${ }^{\circledR}$ technology for high performance
- Very low quiescent power dissipation (-10 A )
- Output on-resistance typically $11 \Omega$
- Low parasitic capacitance
- DC to 50 MHz small signal frequency response
- -60 dB typical off-isolation at 5.0 MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- Serial shift register logic control with latches
- Flexible operating supply voltages
- Surface mount packages

## Applications

- Medical ultrasound imaging
- Non-destructive evaluation

## General Description

The Supertex HV219 is a low switch resistance, low charge injection, 8 -channel, 200 V , analog switch integrated circuit (IC) intended primarily for medical ultrasound imaging. The device can also be used for NDE (non-destructive evaluation) applications. The HV219 is a lower switch resistance, $11 \Omega$ versus $22 \Omega$, version of the Supertex HV20220 device. The lower switch resistance will help reduce insertion loss. It has the same pin configuration as that of the Supertex HV20220PJ and the HV20220FG.

The device is manufactured using Supertex's HVCMOS® (high voltage CMOS) technology with high voltage bilateral DMOS structures for the outputs and low voltage CMOS logic for the input control. The outputs are configured as eight independent single pole single throw $11 \Omega$ analog switches. The input logic is an 8 -bit serial to parallel shift register followed by an 8 -bit parallel latch. The switch states are determined by the data in the latch. Logic high will correspond to a closed switch and logic low as an opened switch.

The HV219 is designed to operate on various combinations of high voltage supplies. For example the $\mathrm{V}_{\mathrm{PP}}$ and $\mathrm{V}_{\mathrm{NN}}$ supplies can be: $+40 \mathrm{~V} /-160 \mathrm{~V},+100 \mathrm{~V} /-100 \mathrm{~V}$, or $+160 \mathrm{~V} /-40 \mathrm{~V}$. This allows the user to maximize the signal voltage for uni-polar negative, bi-polar, or unipolar positive.

## Block Diagram

## Ordering Information

| Part Number | Package Option | Packing |
| :--- | :--- | :--- |
| HV219FG-G | 48-Lead LQFP | $250 /$ Tray |
|  |  | 1000/Reel |
| HV219FG-G M931 | 28-Lead PLCC | $38 /$ Tube |
|  |  | $500 /$ Reel |
| HV219PJ-G M904 |  |  |

-G denotes a lead (Pb)-free / RoHS compliant package

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\mathrm{DD}}$ logic power supply voltage | -0.5 V to +15 V |
| $\mathrm{~V}_{\mathrm{PP}}-\mathrm{V}_{\mathrm{NN}}$ supply voltage | 220 V |
| $\mathrm{~V}_{\mathrm{PP}}$ positive high voltage supply | -0.5 V to $\mathrm{V}_{\mathrm{NN}}+200 \mathrm{~V}$ |
| $\mathrm{~V}_{\mathrm{NN}}$ negative high voltage supply | +0.5 V to -200 V |
| Logic input voltages | -0.5 V to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ |
| Analog signal range | $\mathrm{V}_{\mathrm{NN}}$ to $\mathrm{V}_{\mathrm{PP}}$ |
| Peak analog signal current/channel | 3.0 A |
| Storage temperature | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Power dissipation: |  |
| 28-Lead PLCC | 1.2 W |
| 48-Lead LQFP | 1.0 W |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

## Operating Conditions

| Sym | Parameter | Value |
| :---: | :--- | ---: |
| $\mathrm{V}_{\mathrm{DD}}$ | Logic power supply voltage | 4.5 V to 13.2 V |
| $\mathrm{~V}_{\mathrm{PP}}$ | Positive high voltage supply | 40 V to $\mathrm{V}_{\mathrm{NN}}+200 \mathrm{~V}$ |
| $\mathrm{~V}_{\mathrm{NN}}$ | Negative high voltage supply | -40 V to -160 V |
| $\mathrm{~V}_{\text {IH }}$ | High level input logic voltage | $\mathrm{V}_{\mathrm{DD}}-1.5 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{DD}}$ |
| $\mathrm{V}_{\mathrm{IL}}$ | Low-level input logic voltage | 0 V to 1.5 V |
| $\mathrm{~V}_{\text {SIG }}$ | Analog signal voltage <br> peak-to-peak | $\mathrm{V}_{\mathrm{NN}}+10 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{PP}}-10 \mathrm{~V}$ |
| $\mathrm{~T}_{\mathrm{A}}$ | Operating free air temperature | $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |

## Pin Configuration

## Product Marking

Package may or may not include the following marks: Si or 48
48-Lead LQFP

YY = Year Sealed WW = Week Sealed L = Lot Number C = Country of Origin* A = Assembler ID* ___ = "Green" Packaging *May be part of top marking

Package may or may not include the following marks: Si or 48
28-Lead PLCC
Typical Thermal Resistance

| Package | $\theta_{j a}$ |
| :--- | :--- |
| 48-Lead LQFP | $52^{\circ} \mathrm{C} / \mathrm{W}$ |
| 28-Lead PLCC | $48^{\circ} \mathrm{C} / \mathrm{W}$ |

## Power Up/Down Sequence

1. Power up/down sequence is arbitrary except GND must be powered up first and powered down last. This applies for applications powering GND of the IC with different voltages.
2. $V_{S I G}$ must always be at or in between $V_{P P}$ and $V_{N N}$ or floating during power up/down transition.
3. Rise and fall times of the power supplies $V_{D D}, V_{P P}$ and $V_{N N}$ should not be less than 1.0 ms .

## Notes:

1. The eight switches operate independently.
2. Serial data is clocked in on the $L$ to $H$ transition clock.
3. The switches go to a state retaining their present condition at the rising edge of the $\overline{L E}$.
4. When $\overline{L E}$ is low, the shift register data flows through the latch.
5. Shift register clocking has no effect on the switch states if $\overline{L E}$ is high.
6. The clear input overrides all other inputs.
