## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# Low Charge Injection 8-Channel High Voltage Analog Switches with Bleed Resistors 

## Features

- HVCMOS ${ }^{\circledR}$ technology for high performance
- Very low quiescent power dissipation (10 AA max.)
- Output on-resistance ( $22 \Omega$ typ.)
- Integrated bleed resistors on the outputs
- Low parasitic capacitances
- DC to 50 MHz small signal frequency response
- -60dB typical output off isolation at 5.0 MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- On-chip shift register, latch and clear logic circuitry
- Flexible high voltage supplies

## Applications

- Medical ultrasound imaging
- Piezoelectric transducer drivers

## General Description

The Supertex HV232 is a low charge injection 8-channel, high-voltage, analog switch integrated circuit (IC) with bleed resistors. This device can be used in applications requiring high voltage switching controlled by low voltage control signals, such as ultrasound imaging and printers. The bleed resistors eliminate voltage built up on capacitive loads such as piezoelectric transducers. Input data is shifted into an 8 -bit shift register which can then be retained in an 8 -bit latch. To reduce any possible clock feed-through noise, Latch Enable ( $\overline{\mathrm{LE}}$ ) should be left high until all bits are clocked in. Using HVCMOS ${ }^{\circledR}$ technology, this switch combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

This IC is suitable for various combinations of high voltage supplies, e.g., $\mathrm{V}_{\mathrm{PP}} / \mathrm{V}_{\mathrm{NN}}:+50 \mathrm{~V} /-150 \mathrm{~V}$, or $+100 \mathrm{~V} /-100 \mathrm{~V}$.

## Block Diagram

Ordering Information

| Part Number | Package Option | Packing |
| :--- | :--- | :--- |
| HV232FG-G | 48-Lead LQFP | 250/Tray |
| HV232FG-G M931 | 48-Lead LQFP | 1000/Reel |
| HV232PJ-G | 28-Lead PLCC | 38/Tube |
| HV232PJ-G M904 | 28-Lead PLCC | 500/Reel |

-G denotes a lead ( $P b$ )-free / RoHS compliant package

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\mathrm{DD}}$ logic power supply voltage | -0.5 V to +15 V |
| $\mathrm{~V}_{\mathrm{PP}}-\mathrm{V}_{\mathrm{NN}}$ supply voltage | 220 V |
| $\mathrm{~V}_{\mathrm{PP}}$ positive high voltage supply | -0.5 V to $\mathrm{V}_{\mathrm{NN}}+200 \mathrm{~V}$ |
| $\mathrm{~V}_{\mathrm{NN}}$ negative high voltage supply | +0.5 V to -200 V |
| Logic input voltages | -0.5 V to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ |
| Analog signal range | $\mathrm{V}_{\mathrm{NN}}$ to $\mathrm{V}_{\mathrm{PP}}$ |
| Peak analog signal current/channel | 3.0 A |
| Storage temperature | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Power dissipation: | 1.0 W |
| 48-Lead LQFP | 1.2 W |
| $28-$ Lead PLCC |  |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

Operating Conditions

| Sym | Parameter | Value |
| :---: | :---: | :---: |
| $V_{\text {D }}$ | Logic power supply voltage ${ }^{1,3}$ | 4.5 V to 13.2 V |
| $V_{\text {PP }}$ | Positive high voltage supply ${ }^{1,3}$ | 40 V to $\mathrm{V}_{\text {NN }}+200 \mathrm{~V}$ |
| $\mathrm{V}_{\text {NN }}$ | Negative high voltage supply ${ }^{1,3}$ | -40V to -160V |
| $\mathrm{V}_{\text {IH }}$ | High level input voltage | D |
| , | Low | 0 V to 1.5 V |
| $\mathrm{V}_{\text {SIG }}$ | Analog signal voltage peak-to-peak ${ }^{2}$ | $\mathrm{V}_{\mathrm{NN}}+10 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{PP}}-10 \mathrm{~V}$ |
| $\mathrm{T}_{\mathrm{A}}$ | Operating free air temperature | $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |
| Notes: | Power up/down sequence is arbtrary except GND must be powered -up first and powered down last. |  |
| $\begin{aligned} & 2 . \\ & 3 . \end{aligned}$ | $V_{S I G}$ must be $V_{N N} \leq V_{S I G} \leq V_{P p}$ or floating during power up/down transition. Rise and fall times of power supplies $V_{D 0}, V_{D P}$ and $V_{N N}$ should not be less than 1.0 msec . |  |

| X | X | X | X | X | X | X | X | X | H |  |  |  | All Switches Off |  |  |  |  |

## Notes:

1. The eight switches operate independently.
2. Serial data is clocked in on the $L$ to $H$ transition of the CLK.
3. The switches go to a state retaining their present condition at the rising edge of $\overline{L E}$. When $\overline{L E}$ is low the shift register data flow through the latch. $D_{\text {OUT }}$ is high when data in the shift register 7 is high.

Shift register clocking has no effect on the switch states if $\overline{L E}$ is high.
6. The CLR clear input overrides all other inputs.
