## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# Low Charge Injection, 24-ChanneI, High Voltage Analog Switch with Bleed Resistors 

## Features

- 24-channel high voltage analog switch
- Integrated bleed resistors on the outputs
- 3.3 or 5.0 V CMOS input logic level
- 3:1 MUX-deMUX with 8 states
- 20 MHz data shift clock frequency
- HVCMOS technology for high performance
- Very low quiescent power dissipation, $10 \mu \mathrm{~A}$
- Low parasitic capacitance
- DC to 50 MHz analog signal frequency
- -60dB typical OFF-isolation at 5.0 MHz
- CMOS logic circuitry for low power
- Excellent noise immunity
- Cascadable serial data register with latches
- Flexible operating supply voltages

## Applications

- Medical ultrasound imaging
- Piezoelectric transducer drivers
- Inkjet printer heads
- Optical MEMS modules

## General Description

The Supertex HV2761 is a low charge injection, 24-channel, high voltage analog switch integrated circuit (IC) intended for use in applications requiring high voltage switching controlled by low voltage control signals, such as medical ultrasound imaging, piezoelectric transducer drivers, and printers. The bleed resistors eliminate voltage built up on capacitive loads such as piezoelectric transducers.

Input data is shifted into a 24 -bit shift register that can then be retained in a 24 -bit latch. To reduce any possible clock feed through noise, the latch enable ( $\overline{\mathrm{LE}}$ ) should be left high until all bits are clocked in. Data are clocked in during the rising edge of the clock. Using HVCMOS technology, this device combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

The device is suitable for various combinations of high voltage supplies, e.g., $\mathrm{V}_{\mathrm{PP}} / \mathrm{V}_{\mathrm{NN}}:+40 \mathrm{~V} /-160 \mathrm{~V},+100 \mathrm{~V} /-100 \mathrm{~V}$, and $+160 \mathrm{~V} /-40 \mathrm{~V}$.

## Block Diagram

Ordering Information

| Part Number | Package | Packing |
| :--- | :--- | :--- |
| HV2761FG-G | 48-Lead LQFP | 250/Tray |
| HV2761FG-G M931 | 48-Lead LQFP | 1000/Reel |

-G indicates package is RoHS compliant ('Green')

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| $\mathrm{V}_{\mathrm{DD}}$ logic supply | -0.5 V to +6.5 V |
| $\mathrm{~V}_{\mathrm{PP}}-\mathrm{V}_{\mathrm{NN}}$ differential supply | 220 V |
| $\mathrm{~V}_{\mathrm{PP}}$ positive supply | -0.5 V to $\mathrm{V}_{\mathrm{NN}}+200 \mathrm{~V}$ |
| $\mathrm{~V}_{\mathrm{NN}}$ negative supply | +0.5 V to -200 V |
| Logic input voltage | -0.5 V to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ |
| Analog signal range | $\mathrm{V}_{\mathrm{NN}}$ to $\mathrm{V}_{\mathrm{PP}}$ |
| Peak analog signal current/channel | 3.0 A |
| Storage temperature | $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ |
| Power dissipation | 1.0 W |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

## Pin Configuration

48-Lead LQFP
(top view)

## Product Marking

 WW = Week Sealed
L = Lot Number
Bottom Marking $\mathrm{C}=$ Country of Origin*

A = Assembler ID*
$\qquad$ = "Green" Packaging
*May be part of top marking
Package may or may not include the following marks: Si or $3 i$

## 48-Lead LQFP

Typical Thermal Resistance

| Package | $\boldsymbol{\theta}_{j a}$ |
| :--- | :--- |
| 48-Lead LQFP | $52^{\circ} \mathrm{C} / \mathrm{W}$ |

Recommended Operating Conditions

| Sym | Parameter | Value |
| :---: | :--- | :--- |
| $\mathrm{V}_{\mathrm{DD}}$ | Logic power supply voltage | 3.0 V to 5.5 V |
| $\mathrm{~V}_{\mathrm{PP}}$ | Positive high voltage supply | +40 V to $\mathrm{V}_{\mathrm{NN}}+200 \mathrm{~V}$ |
| $\mathrm{~V}_{\mathrm{NN}}$ | Negative high voltage supply | -40 V to -160 V |
| $\mathrm{~V}_{\mathrm{H}}$ | High level input voltage | $0.9 \mathrm{~V}_{\text {DD }}$ to $\mathrm{V}_{\mathrm{DD}}$ |
| $\mathrm{V}_{\mathrm{IL}}$ | Low level input voltage | 0 V to $0.1 \mathrm{~V}_{\mathrm{DD}}$ |
| $\mathrm{V}_{\text {SIG }}$ | Analog signal voltage peak-to-peak | $\mathrm{V}_{\mathrm{NV}}+10 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{PP}}-10 \mathrm{~V}$ |
| $\mathrm{~T}_{\mathrm{A}}$ | Operating free air temperature | $0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ |

## Notes:

1. Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.
2. $\quad V_{S I G}$ must be $V_{N N} \leq V_{S I G} \leq V_{P P}$ or floating during power up/down transition.
3. Rise and fall times of power supplies $V_{D D}, V_{P P}$ and $V_{N N}$ should not be less than 1.0 msec .

## Notes:

1. The 24 switches operate independently.
2. Serial data is clocked in on the $L$ to $H$ transition of the CLK.
3. All 24 switches go to a state retaining their latched condition at the rising edge of $\overline{L E}$. When $\overline{L E}$ is low the shift registers data flow through the latch.
4. DOUT is high when data in the register 23 is high.
5. Shift registers clocking has no effect on the switch states if $\overline{L E}$ is high.
6. The CLR clear input overrides all other inputs.
