## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 32-Channel Serial to Parallel Converter With Open Drain Outputs

## Features

- Processed with HVCMOS ${ }^{\circledR}$ technology
- Sink current minimum 100 mA
- Shift register speed 8.0 MHz
- Polarity and Blanking inputs
- CMOS compatible inputs
- Forward and reverse shifting options
- Diode to VPP allows efficient power recovery

## General Description

The HV5530 is a low-voltage serial to high-voltage parallel converter with open drain outputs. This device has been designed for use as a driver for AC-electroluminescent displays. It can also be used in any application requiring multiple output high voltage current sinking capabilities such as driving inkjet and electrostatic print heads, plasma panels, vacuum fluorescent, or large matrix LCD displays.

This device consists of a 32-bit shift register, 32 latches, and control logic to perform the polarity select and blanking of the outputs. Data is shifted through the shift register on the high to low transition of the clock. The HV5530 shifts in the counter clockwise direction when viewed from the top of the package. A data output buffer is provided for cascading devices. This output reflects the current status of the last bit of the shift register. Operation of the shift register is not affected by the $\overline{\mathrm{LE}}$ (latch enable), $\overline{B L}$ (blanking), or the $\overline{\mathrm{POL}}$ (polarity) inputs. Transfer of data from the shift register to the latch occurs when the $\overline{\mathrm{LE}}$ (latch enable) input is high. The data in the latch is stored when $\overline{\mathrm{LE}}$ is low.

## Functional Block Diagram

## Ordering Information

| Part Number | Package | Packing |
| :--- | :--- | :--- |
| HV5530PG-G | 44-Lead PQFP | 96/Tray |
| HV5530PG-G M919 | 44-Lead PQFP | 500/Reel |
| HV5530PJ-G | 44-Lead PLCC | 27/Tube |
| HV5530PJ-G M903 | 44-Lead PLCC | 500/Reel |

-G denotes a lead (Pb)-free / RoHS compliant package

## Absolute Maximum Ratings

| Parameter | Value |
| :--- | ---: |
| Supply voltage, $\mathrm{V}_{\mathrm{DD}}{ }^{1}$ | -0.5 V to +15 V |
| Output voltage, $\mathrm{V}_{\mathrm{PP}}{ }^{1}$ | -0.5 V to +315 V |
| Logic input levels ${ }^{1}$ | -0.5 V to $\mathrm{V}_{\mathrm{DD}}+0.5 \mathrm{~V}$ |
| Ground current ${ }^{2}$ | 1.5 A |
| Continuous total power dissipation ${ }^{3}$ | 1200 mW |
| Operating temperature range | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Storage temperature range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.

## Notes:

1. All voltages are referenced to $V_{s s}$
2. Duty cycle is limited by the total power dissipated in the package
3. For operation above $25^{\circ} \mathrm{C}$ ambient derate linearly to maximum operating temperature at $20 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$.

## Recommended Operating Conditions

| Sym | Parameter | Min | Max | Units |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{V}_{\mathrm{DD}}$ | Logic voltage supply | 10.8 | 13.2 | V |
| $\mathrm{HV}_{\mathrm{OUT}}$ | High voltage output | -0.3 | +300 | V |
| $\mathrm{~V}_{\mathrm{IH}}$ | Input high voltage | $\mathrm{V}_{\mathrm{DD}}-2.0$ | $\mathrm{~V}_{\mathrm{DD}}$ | V |
| $\mathrm{V}_{\mathrm{IL}}$ | Input low voltage | 0 | 2.0 | V |
| $\mathrm{f}_{\mathrm{CLK}}$ | Clock frequency | - | 8.0 | MHz |
| $\mathrm{T}_{\mathrm{A}}$ | Operating free-air temperature | -40 | +85 | ${ }^{\circ} \mathrm{C}$ |

## Power-Up Sequence

## Power-up sequence should be the following:

1. Connect ground
2. Apply $V_{D D}$
3. Set all inputs to a known state

Power-down sequence should be the reverse of the above.

## Pin Configuration

$\underset{\text { (top view) }}{\text { 44-Lead PQPP }}$
