

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

HY330

Description

This revolutionary package design allows the lighting designer to reduce the number of LEDs required and provide a more uniform and unique illuminated appearance than with other LED solutions.

This package LEDs are designed for high current operation and high flux output application. But the package's design features better thermal management characteristics than other LED solutions. Because of these advantages, this product have many applications. Such as automotive tail, stop and turn signal lamps, and electronic signs etc.

HY330

Features

- High flux output and high luminance
- Designed for high current operation
- Uniform color
- Low profile and low thermal resistance
- Packaged in tubes for use with automatic insertion equipment

Applications

- Automotive exterior lighting
- Electronic signs and signals
- Channel letter / lighting
- Decorative lighting
- Specialty Lighting

2. Absolute Maximum Ratings ($T_a = 25^{\circ}$ C)

		Item	Symbol	Value	Unit
		DC Forward Current	I _F	70	mA
	F	Forward Peak Pulse Current	[1]	100	mA
		Reverse Voltage	V_R	5	V
Γ	7	Power Dissipation	P_{D}	238	mW
		Operating Temperature	T _{opr}	-40 ~ 100	°C
		Storage Temperature	T _{stg}	-50 ~ 105	°C
		Solder Temperature	T_{s}	260°C for 5second [2]	°C

Notes:

[1] $t \le 0.1$ ms, D = 1/10

[2] No closer than 1.5mm from the base of the stopper.

3. Electro-Optical Characteristics ($T_a = 25^{\circ}\text{C}$, $I_F = 70\text{mA}$)

ltom	Symbol	Value		Unit	
ltem		Min.	Тур.	Max.	Onit
Luminous Flux [3]	$\Phi_{}^{[4]}$	4.4	6.0	-	lm
Luminous Intensity	I_{ν}	-	4000	-	mcd
Dominant Wavelength ^[5]	λ_d	584	590	600	nm
Forward Voltage ^[6]	V_{F}	-	2.6	3.4	V
View Angle	2 θ _½		90		deg.
Thermal Resistance	$R heta_{ extsf{J-A}}$	220		°C /W	
Optical Efficiency	η_{opt}	-	33	-	lm/W
Reverse Current (at $V_R = 5V$)	I_R	-	-	5	μA

Notes:

- [3] SSC maintains a tolerance of $\pm 10\%$ on flux and power measurements.
- [4] Φ_V is the total luminous flux output as measured with an integrated sphere.
- [5] Dominant wavelength is derived from the CIE 1931 Chromaticity diagram.
 - A tolerance of ±0.5nm for dominant wavelength.
- [6] A tolerance of ± 0.05 V on forward voltage measurements.

nical Da	4. Reliability Tests			
ita Shee	Item	Condition	Note	Failures
1661	Life Test	$T_a = RT, I_F = 70 \text{mA}$	1000hrs	0/22
	High Temperature Operating	$T_a = 100^{\circ}\text{C}, \ I_F = 20\text{mA}$	1000hrs	0/22
	Low Temperature Operating	$T_a = -40^{\circ}\text{C}, \ I_F = 70\text{mA}$	1000hrs	0/22
	Thermal Shock	T_a = -50°C (30min) ~ 105° (30min) (Transfer time : 5sec, 1Cycle = 1hr)	100 cycles	0/40
	Resistance to soldering Heat	$T_{\rm s}$ = 255 ± 5°C, t = 4 ± 1sec	1 time	0/22
	ESD (Human Body Model)	1kV, 1.5kΩ ; 100pF	1 time	0/22
	High Temperature Storage	T _a = 105°C	1000hrs	0/22
	Low Temperature Storage	T _a = -50°C	1000hrs	0/22
	Temperature Humidity Storage	T _a = 85°C, RH = 85%	1000hrs	0/22
	Temperature Humidity Operating	T _a = 85°C, RH = 85%, I _F = 40mA	500hrs	0/22

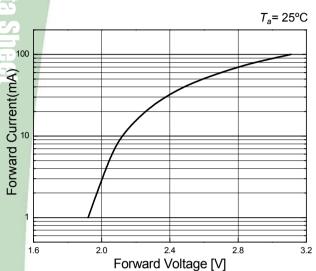

< Judging Criteria For Reliability Tests >

V_F	USL ^[1] X 1.2
I _R	USL X 2.0
Φ_{V}	LSL [2] X 0.7

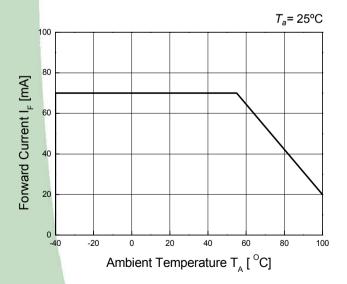

Notes:

[1] USL: Upper Standard Level [2] LSL: Lower Standard Level.

7. Outline Dimensions

Notes: Protruded epoxy is 1.0mm maximum.

8. Packing

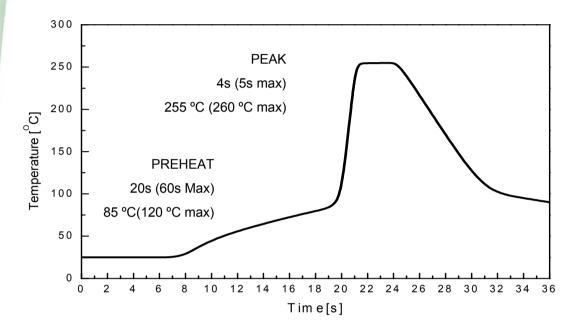

9. Soldering Profile

- 1) Recommended Wave Soldering Conditions / Profile
- Preliminary heating to be at 85°C(120 °C max) for 20 seconds(60 seconds max).
- Soldering heat to be at 255 °C (260°C max) for 4 seconds (5 seconds max.)
- Soak time above 200 °C is 5 seconds

2) Hand Soldering conditions

• Not more than 3 seconds at max. 350°C, under Soldering iron.

3) Caution

- Lead frames are silver plated copper alloy. This substance has a low thermal coefficient (easily conducts heat)
- No closer than 1.5mm from the base of the stopper.
- The LEDs must not be repositioned after soldering.
- Do not apply any stress to the lead particularly when heat.

Note: In case the soldered products are reused in soldering process, we don't guarantee the products.

- 1) Storage

 Before opening the package
 Avoid the absorption of moists
 box(or desiccator) with a des
 Tomperature: 5 °C~30 °C Hui Avoid the absorption of moisture, we recommended to store High Flux LEDs in a dry box(or desiccator) with a desiccant. Otherwise, store them in the following environment: Temperature : 5° C~30°C Humidity : 50% max.
 - After opening the package
 - a. Soldering should be done right after opening the package(within 24Hrs).
 - b. Keeping of a fraction
 - Sealing
 - Temperature : 5 ~ 40 °C, Humidity : less than 30%
 - c. If the package has been opened more than 1week or the color of desiccant changes, Components should be dried for 10-12hr at 60 ± 5 °C
 - Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temp. after soldering.
 - Avoid quick cooling
 - Leadframes are silver plated copper alloy. The silver plate surface may be affected by environments which contains corrosive substances. Please avoid conditions which may cause the LEDs to corrode, tarnish or discolor.

2) Static Electricity

- Static Electricity and surge voltage damage the LEDs. So it is recommended that a wrist band or an anti-electrostatic glove be used when handling the LEDs.
- All devices, equipment and machinery must be properly grounded. It is recommended precautions be taken against surge voltage to the equipment that mounts the LEDs.

Heat Generation

- Thermal is one of the important parameter to design the end product. Please consider the heat generation of the LEDs.
- The operating current should be decided after considering the ambient maximum temperature of LEDs.

4) Others

- The color of the LEDs is changed a little by an operating current and thermal.
- Anti radioactive ray design is not considered for the products listed here in.
- Gallium arsenide is used in some of the products listed in this publication. These products
 are dangerous if they are burned or smashed in the process of disposal. It is also dangerous
 to drink the liquid or inhale the gas generated by such products when chemically disposed.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When washing is required, IPA(Isopropyl Alcohol) should be used.
- When the LEDs are illuminating, operating current should be decided after considering the junction temperature.
 - Cf.) Please refer Ambient temperature vs. Forward Current graph on page 5
- The appearance and specifications of the product may be modified for improvement without notice.
