

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## High SPL Analog Microphone with Extended Low Frequency Response

### GENERAL DESCRIPTION

The ICS-40300\* is a low-noise, high SPL MEMS microphone with extended low frequency response. The ICS-40300 consists of a MEMS microphone element and an impedance converter amplifier. The ICS-40300 low frequency response makes it an excellent choice for applications requiring precise phase matching. The ICS-40300 is pin compatible with the INMP401 and INMP411 microphones, providing an easy upgrade path.

The ICS-40300 has a linear response up to 130 dB SPL. It offers low frequency extension down to 6 Hz, resulting in excellent phase characteristics in the audio range. Low current consumption enables long battery life for portable applications.

The ICS-40300 is available in a 4.72 mm × 3.76 mm × 3.5 mm surface-mount package. It is reflow solder compatible with no sensitivity degradation.

*\*Protected by U.S. Patents 7,449,356; 7,825,484; 7,885,423; and 7,961,897. Other patents are pending.*

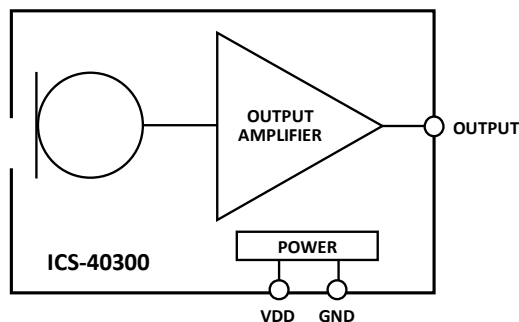

### APPLICATIONS

- Active Noise-Cancelling Headsets
- Teleconferencing Systems
- Studio Microphones
- Live Microphones
- Security and Surveillance
- Photoacoustic Gas Sensing

### FEATURES

- 4.72 × 3.76 × 3.5 mm Surface-Mount Package
- Extended Frequency Response from 6 Hz to 20 kHz
- 130 dB SPL Acoustic Overload Point
- Sensitivity of -45 dBV
- ±2 dB Sensitivity Tolerance
- Omnidirectional Response
- High SNR of 63 dBA
- Low Current Consumption: <220 μA
- Single-Ended Analog Output
- High PSR of -80 dBV
- Compatible with Sn/Pb and Pb-Free Solder Processes
- RoHS/WEEE Compliant

**SPECIFICATIONS**

**TABLE 1. ELECTRICAL CHARACTERISTICS**

T<sub>A</sub> = -40 to 85°C, V<sub>DD</sub> = 1.5 to 3.63 V, unless otherwise noted. All minimum and maximum specifications are guaranteed across temperature and voltage specified in Table 1, unless otherwise noted. Typical specifications are not guaranteed.

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS	NOTES
<b>PERFORMANCE</b>						
Directionality			Omni			
Sensitivity	1 kHz, 94 dB SPL	-47	-45	-43	dBV	
Signal-to-Noise Ratio (SNR)			63		dB	
Equivalent Input Noise (EIN)			31		dB SPL	
Dynamic Range	Derived from EIN and maximum acoustic input		99		dB	
Frequency Response	Low frequency -3 dB point		6		Hz	1
	High frequency -3 dB point		>20		kHz	
Total Harmonic Distortion (THD)	105 dB SPL		0.2	1	%	
Power-Supply Rejection (PSR)	217 Hz, 100 mV <sub>p-p</sub> square wave superimposed on V <sub>DD</sub> = 1.8 V		-80		dBV	
Power-Supply Rejection Ratio (PSRR)	1 kHz, 100 mV <sub>p-p</sub> sine wave superimposed on V <sub>DD</sub> = 1.8 V		-55		dB	
Acoustic Overload Point	10% THD		130		dB SPL	
<b>POWER SUPPLY</b>						
Supply Voltage (V <sub>DD</sub> )		1.5		3.63	V	
Supply Current (I <sub>S</sub> )						
	V <sub>DD</sub> = 1.8 V		180	220	μA	
	V <sub>DD</sub> = 3.3 V		210	250	μA	
<b>OUTPUT CHARACTERISTICS</b>						
Output Impedance (Z <sub>OUT</sub> )			200		Ω	
Output DC Offset			0.8		V	
Maximum Output Voltage	130 dB SPL input		0.355		V rms	
Noise Floor	20 Hz to 20 kHz, A-weighted, rms		-108		dBV	

**Note 1:** See Figure 3 and Figure 4.

**ABSOLUTE MAXIMUM RATINGS**

Stress above those listed as Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions is not implied. Exposure to the absolute maximum ratings conditions for extended periods may affect device reliability.

**TABLE 2. ABSOLUTE MAXIMUM RATINGS**

PARAMETER	RATING
Supply Voltage ( $V_{DD}$ )	-0.3 V to +3.63 V
Sound Pressure Level	160 dB
Mechanical Shock	10,000 g
Vibration	Per MIL-STD-883 Method 2007, Test Condition B
Temperature Range	
Biased	-40°C to +85°C
Storage	-55°C to +150°C

**ESD CAUTION**

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

SOLDERING PROFILE

Figure 1. Recommended Soldering Profile Limits

TABLE 3. RECOMMENDED SOLDERING PROFILE\*

PROFILE FEATURE		Sn63/Pb37	Pb-Free
Average Ramp Rate ( $T_L$ to $T_P$ )		1.25°C/sec max	1.25°C/sec max
Preheat	Minimum Temperature ( $T_{SMIN}$ )	100°C	100°C
	Minimum Temperature ( $T_{SMIN}$ )	150°C	200°C
	Time ( $T_{SMIN}$ to $T_{SMAX}$ ), $t_S$	60 sec to 75 sec	60 sec to 75 sec
Ramp-Up Rate ( $T_{SMAX}$ to $T_L$ )		1.25°C/sec	1.25°C/sec
Time Maintained Above Liquidous ( $t_L$ )		45 sec to 75 sec	~50 sec
Liquidous Temperature ( $T_L$ )		183°C	217°C
Peak Temperature ( $T_P$ )		215°C +3°C/-3°C	260°C +0°C/-5°C
Time Within +5°C of Actual Peak Temperature ( $t_p$ )		20 sec to 30 sec	20 sec to 30 sec
Ramp-Down Rate		3°C/sec max	3°C/sec max
Time +25°C ( $t_{25^\circ\text{C}}$ ) to Peak Temperature		5 min max	5 min max

\*Note: The reflow profile in Table 3 is recommended for board manufacturing with InvenSense MEMS microphones. All microphones are also compatible with the J-STD-020 profile

APPLICATIONS INFORMATION

CONNECTING TO AUDIO CODECS

The ICS-40300 output can be connected to a dedicated codec microphone input (see Figure 12) or to a high input impedance gain stage (see Figure 13.) A 0.1 μF ceramic capacitor placed close to the ICS-40300 supply pin is used for testing and is recommended to adequately decouple the microphone from noise on the power supply. A DC-blocking capacitor is required at the output of the microphone. This capacitor creates a high-pass filter with a corner frequency at

$$f_c = 1/(2\pi \times C \times R)$$

where *R* is the input impedance of the codec.

A minimum value of 22 μF is recommended in Figure 12 because the input impedance of some codecs can be as low as 2 kΩ at their highest PGA gain setting, which results in a high-pass filter corner frequency at 3.6 Hz. At lower gain settings, where the codec input impedance is also lower, a smaller AC-coupling capacitor can be used. Figure 13 shows the ICS-40300 connected to an op amp configured as a non-inverting preamplifier.

Figure 12. ICS-40300 Connected to a Codec

Figure 13. ICS-40300 Connected to an Op Amp

DYNAMIC RANGE CONSIDERATIONS

To fully utilize the 99 dB dynamic range of the ICS-40300 in a design, the preamp, ADC, or codec circuit following it must be chosen carefully. A typical codec may have a 100 dB dynamic range with *V<sub>DD</sub>* = 3.3 V. To match the dynamic ranges between the microphone and the ADC input of the codec, some gain must be added to the ICS-40300 output. For example, at the 130 dB SPL maximum acoustic input, the ICS-40300 outputs a -9 dBV rms signal. The full-scale input voltage of a codec may be 0 dBV; therefore, 9 dB of gain must be added to the signal to match the dynamic range of the microphone with the dynamic range of the codec.

### **APPLICATION NOTE (PRODUCT-SPECIFIC)**

AN-0284 *Low-Noise Directional Studio Microphone Reference Design*

**PCB DESIGN AND LAND PATTERN LAYOUT**

The recommended PCB land pattern for the ICS-40300 should be laid out to a 1:1 ratio to the solder pads on the microphone package, as shown in Figure 14. Take care to avoid applying solder paste to the sound hole in the PCB. A suggested solder paste stencil pattern layout is shown in Figure 15. The diameter of the sound hole in the PCB should be larger than the diameter of the sound port of the microphone. A minimum diameter of 0.5 mm is recommended.

Figure 14. PCB Land Pattern Layout  
Dimensions shown in millimeters

Figure 15. Suggested Solder Paste Stencil Pattern Layout  
Dimensions shown in millimeters

**PCB MATERIAL AND THICKNESS**

The performance of the ICS-40300 is not affected by PCB thickness. The ICS-40300 can be mounted on either a rigid or flexible PCB. A flexible PCB with the microphone can be attached directly to the device housing with an adhesive layer. This mounting method offers a reliable seal around the sound port while providing the shortest acoustic path for good sound quality.

## **HANDLING INSTRUCTIONS**

### **PICK AND PLACE EQUIPMENT**

The MEMS microphone can be handled using standard pick-and-place and chip shooting equipment. Take care to avoid damage to the MEMS microphone structure as follows:

- Use a standard pickup tool to handle the microphone. Because the microphone hole is on the bottom of the package, the pickup tool can make contact with any part of the lid surface.
- Do not pick up the microphone with a vacuum tool that makes contact with the bottom side of the microphone. Do not pull air out of or blow air into the microphone port.
- Do not use excessive force to place the microphone on the PCB.

### **REFLOW SOLDER**

For best results, the soldering profile must be in accordance with the recommendations of the manufacturer of the solder paste used to attach the MEMS microphone to the PCB. It is recommended that the solder reflow profile not exceed the limit conditions specified in Figure 1 and Table 3.

### **BOARD WASH**

When washing the PCB, ensure that water does not make contact with the microphone port. Do not use blow-off procedures or ultrasonic cleaning.
