

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### PCI-EXPRESS CLOCK SOURCE

ICS557-01

## **Description**

The ICS557-01 is a clock chip designed for use in PCI-Express Cards as a clock source. It provides a pair of differential outputs at 100 MHz in a small 8-pin SOIC package.

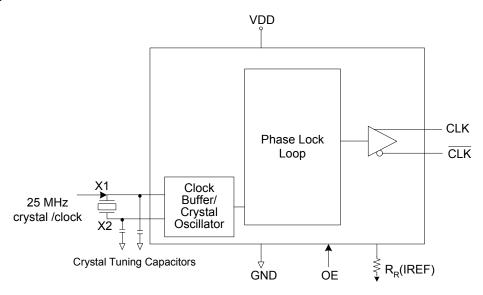

Using IDT' patented Phase-Locked Loop (PLL) techniques, the device takes a 25 MHz crystal input and produces HCSL (Host Clock Signal Level) differential outputs at 100 MHz clock frequency. LVDS signal levels can also be supported via an alternative termination scheme.

#### **Features**

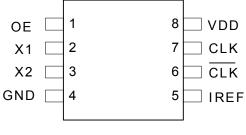

- Supports PCI-Express<sup>TM</sup> HCSL Outputs 0.7 V current mode differential pair
- Supports LVDS Output Levels
- Packaged in 8-pin SOIC
- Available in RoHS 5 (green ) or RoHS 6 (green and lead free) compliant packaging
- Operating voltage of 3.3 V
- Low power consumption
- Input frequency of 25 MHz
- Short term jitter 100 ps (peak-to-peak)
- Output Enable via pin selection
- · Industrial temperature range available

NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01

### **Block Diagram**

# **Pin Assignment**

8 Pin (150 mil) SOIC

## **Pin Descriptions**

| Pin<br>Number | Pin<br>Name | Pin<br>Type | Pin Description   |
|---------------|-------------|-------------|---|
| 1             | OE          | Input       | Output Enable signal (H = outputs are enabled, L = outputs are disabled/tristated). Internal pull-up resistor.      |
| 2             | X1          | Input       | Crystal or clock input. Connect to a 25 MHz crystal or single ended clock.  |
| 3             | X2          | ХО          | Crystal Connection. Connect to a parallel mode crystal.  Leave floating if clock input.                             |
| 4             | GND         | Power       | Connect to ground.  |
| 5             | IREF        | Output      | A 475 $\Omega$ precision resistor connected between this pin and ground establishes the external reference current. |
| 6             | CLK         | Output      | HCSL differential complementary clock output.   |
| 7             | CLK         | Output      | HCSL differential clock output.   |
| 8             | VDD         | Power       | Connect to +3.3 V.  |

### **Applications Information**

#### **External Components**

A minimum number of external components are required for proper operation.

### **Decoupling Capacitors**

Decoupling capacitors of 0.01  $\mu F$  should be connected between VDD and the ground plane (pin 4) as close to the VDD pin as possible. Do not share ground vias between components. Route power from power source through the capacitor pad and then into IDT pin.

### Crystal

A 25 MHz fundamental mode parallel resonant crystal with  $C_L$  = 16 pF should be used. This crystal must have less than 300 ppm of error across temperature in order for the ICS557-01 to meet PCI Express specifications.

### **Crystal Capacitors**

Crystal capacitors are connected from pins X1 to ground and X2 to ground to optimize the accuracy of the output frequency.

C<sub>I</sub> = Crystal's load capacitance in pF

Crystal Capacitors (pF) =  $(C_1 - 8) * 2$ 

For example, for a crystal with a 16 pF load cap, each external crystal cap would be 16 pF. (16-8)\*2=16.

Current Source (Iref) Reference Resistor - RR

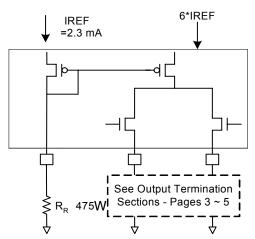

If board target trace impedance (Z) is  $50\Omega$  then  $R_R=475\Omega$  (1%), providing IREF of 2.32 mA. The output current (I<sub>OH</sub>) is equal to 6\*IREF.

**Output Termination** 

The PCI-Express differential clock outputs of the ICS557-01 are open source drivers and require an external series resistor and a resistor to ground. These resistor values and their allowable locations are shown in detail in the **PCI-Express Layout Guidelines** section.

The ICS557-01can also be configured for LVDS compatible voltage levels. See the LVDS Compatible Layout Guidelines section

### **Output Structures**

### **General PCB Layout Recommendations**

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1. Each  $0.01\mu F$  decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible.
- 2. No vias should be used between decoupling capacitor and VDD pin.
- 3. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via. Distance of the ferrite bead and bulk decoupling from the device is less critical.
- 4. An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers (any ferrite beads and bulk decoupling capacitors can be mounted on the back). Other signal traces should be routed away from the ICS557-01. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

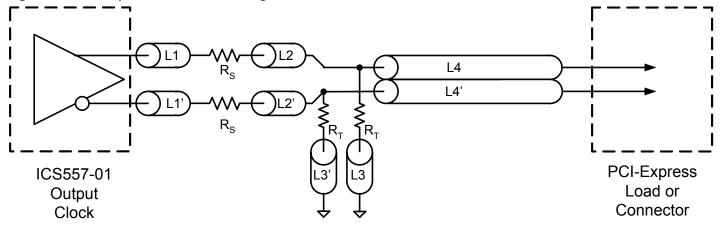

## **PCI-Express Layout Guidelines**

| Common Recommendations for Differential Routing | Dimension or Value | Unit | Figure | Notes |
|---|--------------------|------|--------|-------|
| L1 length, Route as non-coupled 50 ohm trace.   | 0.5 max            | inch | 1,2    |       |
| L2 length, Route as non-coupled 50 ohm trace.   | 0.2 max            | inch | 1,2    |       |
| L3 length, Route as non-coupled 50 ohm trace.   | 0.2 max            | inch | 1,2    |       |
| $R_{S}$   | 33                 | ohm  | 1,2    |       |
| $R_{\mathrm{T}}$                                | 49.9               | ohm  | 1,2    |       |

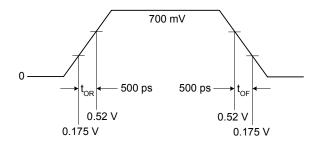

| Differential Routing on a Single PCB                                      | Dimension or Value  | Unit | Figure | Notes |
|---|---------------------|------|--------|-------|
| L4 length, Route as coupled <b>microstrip</b> 100 ohm differential trace. | 2 min to 16 max     | inch | 1      |       |
| L4 length, Route as coupled <b>stripline</b> 100 ohm differential trace.  | 1.8 min to 14.4 max | inch | 1      |       |

| Differential Routing to a PCI Express Connector                           | Dimension or Value    | Unit | Figure | Notes |
|---|-----------------------|------|--------|-------|
| L4 length, Route as coupled <b>microstrip</b> 100 ohm differential trace. | 0.25 to 14 max        | inch | 2      |       |
| L4 length, Route as coupled <b>stripline</b> 100 ohm differential trace.  | 0.225 min to 12.6 max | inch | 2      |       |

## **Absolute Maximum Ratings**

Stresses above the ratings listed below can cause permanent damage to the ICS557-01. These ratings are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item                                       | Rating              |
|--|---------------------|
| Supply Voltage, VDD, VDDA                  | 5.5 V               |
| All Inputs and Outputs                     | -0.5 V to VDD+0.5 V |
| Ambient Operating Temperature (commercial) | 0 to +70° C         |
| Ambient Operating Temperature (industrial) | -40 to +85° C       |
| Storage Temperature                        | -65 to +150° C      |
| Junction Temperature                       | 125° C              |
| Soldering Temperature                      | 260° C              |
| ESD Protection (Input)                     | 2000 V min. (HBM)   |

### **DC Electrical Characteristics**

Unless stated otherwise, VDD = 3.3 V ±5%, Ambient Temperature -40 to +85° C

| Parameter                          | Symbo             | Conditions                    | Min.    | Тур. | Max.     | Units |

\*NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01

Parts that are ordered with a "LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. IDT reserves the right to change any circuitry or specifications without notice. IDT does not authorize or warrant any IDT product for use in life support devices or critical medical instruments.
