# ZERO DELAY, LOW SKEW BUFFER

**ICS574**

## Description

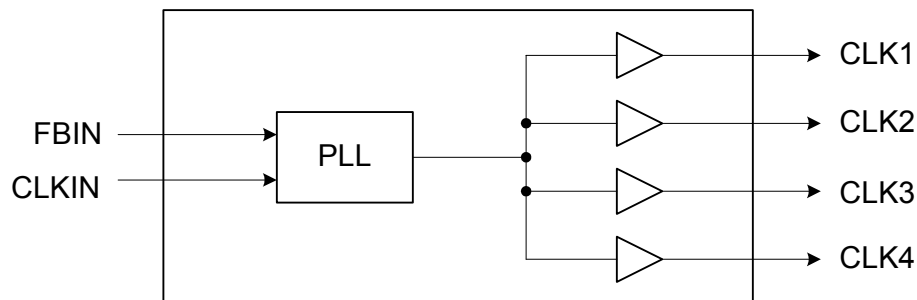

The ICS574 is a low jitter, low-skew, high performance PLL-based zero delay buffer for high speed applications. Based on IDT's proprietary low jitter Phase Locked Loop (PLL) techniques, the device provides four low skew outputs at speeds up to 160 MHz at 3.3 V. When one of the outputs is connected directly to FBIN, the rising edge of each output is aligned with the rising edge of the input clock. External delay elements connected in the feedback loops will cause the outputs to occur before the inputs by the amount of propagation delay of the external element.

## Features

- Packaged in 8 pin narrow SOIC, Pb (lead) free available
- Zero input-to-output delay
- Four 1X outputs
- Output to output skew is less than 150 ps
- Output clocks up to 160 MHz at 3.3 V
- External feedback path for output edge placement
- Spread Smart™ technology works with spread spectrum clock generators
- Full CMOS outputs with 18 mA output drive capability at TTL levels at 3.3 V
- Advanced, low power, sub-micron CMOS process
- Operating voltage from 3.0 to 5.5 V
- Industrial temperature version available

**NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01**

## Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	CLKIN	Input	Clock input. Connect to input clock source.
2, 3, 6, 7	CLK1:4	Output	Clock Outputs (4).
4	GND	Power	Connect to ground.
5	VDD	Power	Power supply. Connect both pins to same voltage (either 3.3 V or 5 V).
8	FBIN	Input	Feedback input.

## External Components

The ICS574 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.1 $\mu$ F should be connected between VDD and GND on pins 4 and 5, as close to the device as possible. A series termination resistor of 33 $\Omega$  may be used close to the pin for each clock output to reduce reflections.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS574. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
Supply Voltage, VDD (referenced to ground)	-0.5 V to 7 V
All Inputs and Outputs	-0.5 V to VDD+0.5 V
Electrostatic Discharge (MIL-STD-883)	2000 V (minimum)
Ambient Operating Temperature	-40° C to +85° C
Soldering Temperature (10 seconds max.)	260° C
Junction Temperature	150° C
Storage Temperature	-65 to +150° C
