

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**LOW PHASE NOISE ZERO DELAY BUFFER AND MULTIPLIER**
**ICS670-01**
**Description**

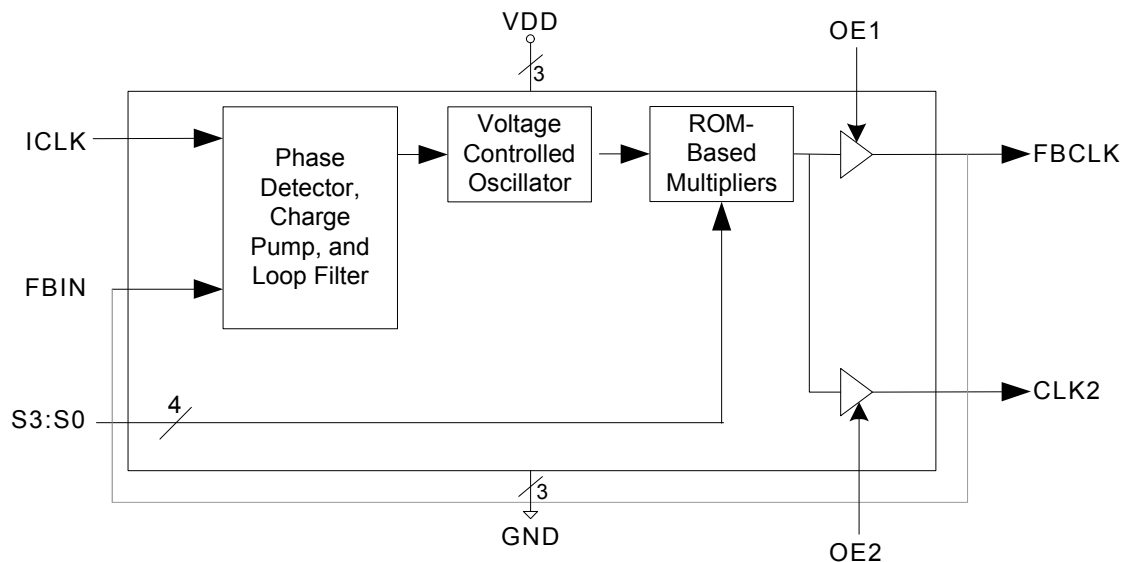

The ICS670-01 is a high-speed, low phase noise, Zero Delay Buffer (ZDB) which integrates IDT's proprietary analog/digital Phase Locked Loop (PLL) techniques. The zero delay feature means that the rising edge of the input clock aligns with the rising edges of the outputs. There are two identical outputs on the chip. FBCLK should be connected to FBIN. Each output has its own output enable pin.

The ICS670-01 is ideal for synchronizing outputs in a large variety of systems, from personal computers to data communications to video. By allowing off-chip feedback paths, the ICS670-01 can eliminate the delay through other devices. The 15 different on-chip multipliers work in a variety of applications. Arbitrary multiplication factors (including fractions) can be configured on the ICS527.

**Features**

- Packaged in 16-pin SOIC
- Available in Pb (lead) free package
- Clock inputs from 5 to 160 MHz (see page 2)
- Patented PLL with low phase noise
- Output clocks up to 160 MHz at 3.3 V
- 15 selectable on-chip multipliers
- Power down mode available
- Low phase noise: -124 dBc/Hz at 10 kHz
- Output enable function tri-states outputs
- Low jitter—15 ps one sigma
- Full swing CMOS outputs with 25 mA drive capability at TTL levels
- Advanced, low power, sub-micron CMOS process
- Industrial temperature version available
- Operating voltage of 3.3 V or 5 V

**NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01**

**Block Diagram**

External Feedback from FBCLK is recommended.

## Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1 - 3	VDD	Input	Power supply. Connect all pins to the same voltage (either 3.3 V or 5 V). Pins 1 and 2 supply the analog sections of the chip.
4	CLK2	Output	Clock output from VCO. Output frequency equals the input frequency times multiplier.
5	OE2	Input	Output clock enable 2. Tri-states the clock 2 output when low.
6	FBCLK	Output	Clock output from VCO. Output frequency equals the input frequency times multiplier.
7	OE1	Input	Output clock enable 1. Tri-states the feedback clock output when low.
8	FBIN	Input	Feedback clock input.
9	ICLK	Input	Clock input. Connect to a 5 - 210 MHz clock.
10	S3	Input	Multiplier select pin 3. Determines outputs per table above. Internal pull-up.
11	S2	Input	Multiplier select pin 2. Determines outputs per table above. Internal pull-up.
12	S1	Input	Multiplier select pin 1. Determines outputs per table above. Internal pull-up.
13	S0	Input	Multiplier select pin 0. Determines outputs per table above. Internal pull-up.
14 - 16	GND	Power	Connect to ground.

## External Components

The ICS670-01 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.01 $\mu$ F should be connected from each VDD pin to the ground plane, as close to the device as possible. A series termination resistor of 33 $\Omega$  should be used to each clock output pin.

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS670-01. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating

### Adjusting Input/Output Skew

The data in Figure 1 can be used to adjust individual circuit characteristics and achieve the minimum possible skew between ICLK and CLK2. With a 125 MHz output, for example, having a total load capacitance of 15 pF will result in nearly zero skew between ICLK and CLK2. Note that the load

capacitance includes board trace capacitance, input capacitance of the load being driven by the ICS670-01, and any additional capacitors connected to CLK2.
