

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# 3.3V CMOS OCTAL BUS TRANSCEIVER WITH 3-STATE OUTPUTS AND 5 VOLT TOLERANT I/O

#### IDT74LVC245A

#### **FEATURES:**

- 0.5 MICRON CMOS Technology
- ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)
- Vcc = 3.3V ± 0.3V, Normal Range
- Vcc = 2.7V to 3.6V, Extended Range
- CMOS power levels (0.4μ W typ. static)
- · Rail-to-rail output swing for increased noise margin
- All inputs, outputs, and I/O are 5V tolerant
- · Supports hot insertion
- Available in SOIC, SSOP, QSOP, and TSSOP packages

#### **DRIVE FEATURES:**

- High Output Drivers: ±24mA
- Reduced system switching noise

#### **APPLICATIONS:**

- · 5V and 3.3V mixed voltage systems
- Data communication and telecommunication systems

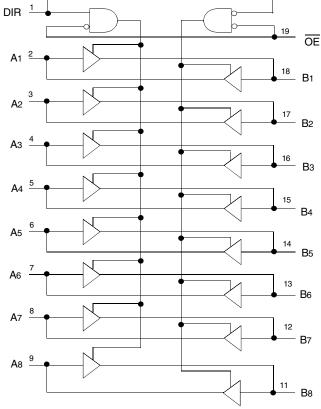

#### **DESCRIPTION:**

This octal bus transceiver is built using advanced dual metal CMOS technology. This high-speed, low power transceiver is ideal for asynchronous communication between two busses (A and B). The direction control pin (DIR) controls the direction of data flow. The output enable pin  $(\overline{OE})$  overrides the direction control and disables both ports. All inputs are designed with hysteresis for improved noise margin.

The LVC245A has been designed with a  $\pm 24$ mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

All pins can be driven from either 3.3V or 5V devices. This feature allows the use of this device as a translator in a mixed 3.3V/5V supply system.

lcc lss	Continuous Current through each Vcc or GND	±100	mA

#### NOTE:

1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
