1.4. Detailed Description

The 92HD202 is a high fidelity, 8-channel audio CODEC compatible with the Intel High Definition (HD) Audio Interface. The 92HD202 provides high quality, HD Audio capability to notebook and cost sensitive desktop PC applications.

The 92HD202 incorporates IDT's proprietary $\Sigma\Delta$ technology to achieve a DAC SNR of up to 95 dB. The higher performance and quality of IDT's audio solutions brings consumer electronics level performance to the notebook, desktop and media center PC.

The 92HD202 provide stereo 24-bit, full duplex resolution supporting sample rates up to 192 KHz by the DAC and ADC. The 92HD202 DAC, ADC and SPDIF In/Out support sample rates of 96 KHz, 48 KHz and 44.1 KHz. Additional sample rates are supported by the driver software.

The 92HD202 supports all desired eight channel configurations, including switchable Headphone Out, and Universal Jacks functionality for jack detection and re-tasking. The SPDIF interface provides connectivity to Consumer Electronic equipment, such as Dolby Digital decoders, powered speakers, mini disk drives or to a home entertainment system. All analog I/O pairs support LINE_IN, LINE_OUT and MIC.

Microphone inputs can be programmed with 0/10/20/30/40dB boost. For more advanced configurations, the 92HD202 has up to four General Purpose I/O (GPIO) pins. The 92HD202 also provides a single ended CD input for compatibility with Digital Rights Management (DRM) solutions and to support legacy OS issues.

The 92HD202 integrates a headphone amplifier which is available on Ports A and D. The headphone amplifier is switchable between these two outputs for increased flexibility, enhanced user experience, and reduced implementation costs. An additional, lower power, headphone supports Port F.

The Universal Jack capabilities allow the CODEC to detect when audio devices are connected, and allow the CODEC to be reconfigured to support these devices regardless of which port they are

plugged into. SPDIF input sensing is also supported. The fully parametric IDT SoftEQ can be initiated upon headphone jack insertion and removal for protection of notebook speakers.

Note: The Jack Detect circuit component selection are critical for accurate detection of audio jacks on individual ports. Please see the 92HD202 reference design for circuit implementation details.

The 92HD202 operates with a 3.3 V digital supply 5 V analog supply.

The 92HD202 is available in a 48-pin LQFP package. The 48-pin LQFP is only available in the Environmental package (Pb-free).

The 92HD202 is supported with IDT's high quality software solutions which include drivers for all major Windows operating systems from Microsoft, parametric SoftEQ, and Digital Rights Management. Third party plug-in capability is easily achieved with the IDT Kernel Processing Interface (SKPI), to support high-valued, third party technologies such as SRS WOW®, Knowles® Microphone Beam Forming, Waves MaxxBASS®, Dolby Headphone®, Dolby ProLogic II® and Dolby Virtual Speaker® and more.

3. DETAILED DESCRIPTION

3.1. Audio Jack Presence Detect

SENSE_A pin is used to detect the presence of plugs in ports A, B, C, and D. SENSE_B pin is used to detect the presence of plugs in ports E and F. Refer to the 92HD202 reference design for port detect circuitry.

3.2. Universal Jacks

There are 6 ports on the 92HD202:

- Port A: pins 39 & 41
- Port B: pins 21 & 22
- Port C: pins 23 & 24
- Port D: pins 35 & 36
- Port E: pins 14 & 15
- Port F: pins 16 & 17

IDT's Universal Jacks technology allows for the greatest flexibility in board design and implementation. For the 92HD202 the Universal Jacks capabilities are as follows:¹

- Port A (pins 39 & 41) can be used for²:
 - Headphone Out
 - Line Out
 - Line In
 - Mic with 0/10/20/30/40 dB Mic boost³
- Port D (pins 35 & 36) can be used for²:
 - Headphone Out
 - Line Out
 - Line In
 - Mic with 0/10/20/30/40 dB Mic boost³
- Port C (pins 23 & 24) can be used for:
 - Line Out
 - Line In
 - Mic with 0/10/20/30/40 dB Mic boost³
- Port B (pins 21 & 22) can be used for:
 - Line Out
 - Line In
 - Mic with 0/10/20/30/40 dB Mic boost³
- Port F (pins 16 & 17) can be used for²:
 - Headphone Out
 - Line Out
 - Line In

- Mic with 0/10/20/30/40 dB Mic boost³
- Port E (pins 14 & 15) can be used for:
 - Line In
 - Mic with 0/10/20/30/40 dB Mic boost³

Note¹: On the 92HD202, only one function can be selected on each pin pair at a time. For example, a pin pair cannot be configured as an input and output at the same time. Configuration can be changed at any time.

Note²: Headphone capabilities are provided on ports A, D and F. Do NOT put headphone loads on more than one port at a time. Port F (pins 16 & 17) can drive 32 ohm headphones, but is designed to provide less power than the headphone amplifiers on ports A (pins 39 & 41) and D (pins 35 & 36).

Note³: 40dB Microphone boost is not recommended.

3.3. SPDIF Input

SPDIF IN can operate at 44.1 KHz, 48 KHz or 96 KHz, and implements internal Jack Sensing.

A sophisticated digital PLL allows automatic rate detection and accurate data recovery. The ability to directly accept consumer SPDIF voltage levels eliminates the need for costly external receiver ICs. Advanced features such as record slot select and SPDIF_IN routing to the DAC allows for simultaneous record and play.

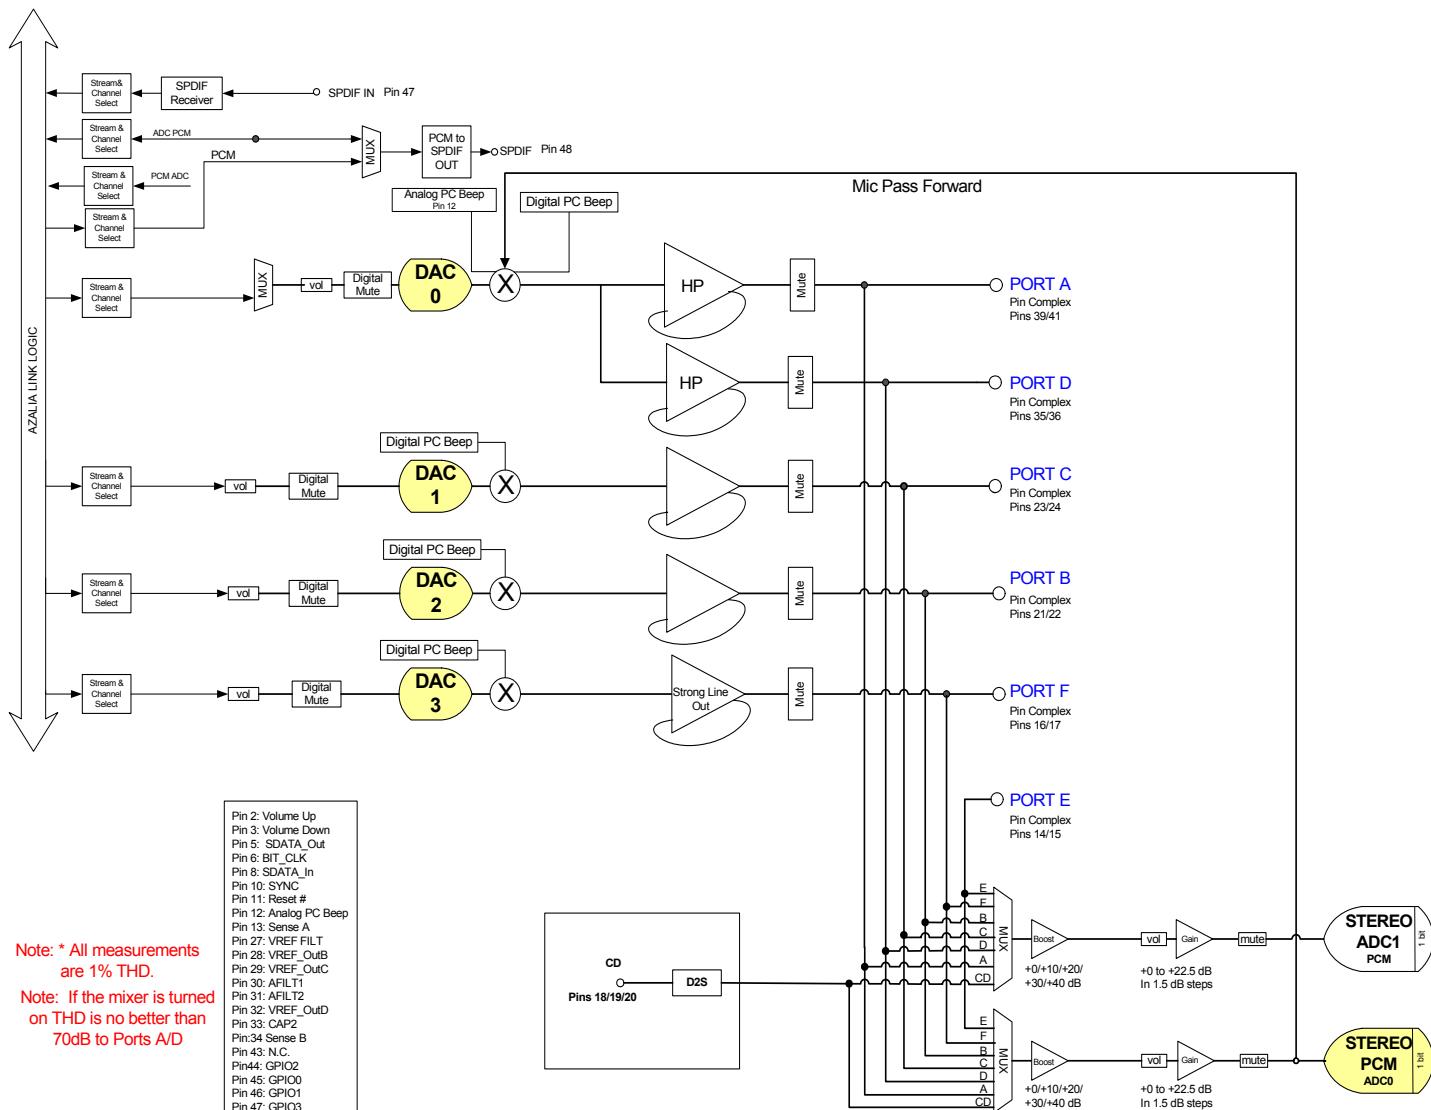

3.4. SPdif Output

SPDIF Output can operate at 44.1 KHz, 48 KHz, and 96 KHz as defined in the Intel High Definition Audio Specification with resolutions up to 24 bits. This insures compatibility with all consumer audio gear and allows for convenient integration into home theater systems and media center PCs.
