DESCRIPTION

The IF-E96E is a low-cost, high-speed, visible red LED housed in a “connector-less” style plastic fiber optic package. The output spectrum is produced by an AlGaInP die which peaks at 645 nm, one of the optical transmission windows of PMMA plastic optical fiber. The device package features an internal micro-lens and a precision-molded PBT housing to maximize optical coupling into standard 1000 μm core plastic fiber cable.

APPLICATION HIGHLIGHTS

The performance/price ratio of the IF-E96E is particularly attractive for high volume design applications. The visible red output has low attenuation in PMMA plastic fiber and aids in troubleshooting installations. When used with an IF-D96 photologic detector the IF-E96E can achieve data rates of 5 Mbps. Fast transition times and low attenuation make the IF-E96E an excellent device selection for low cost analog and digital data link up to 75 meters.

FIBER TERMINATION INSTRUCTIONS

1. Cut off the ends of the optical fiber with a single-edge razor blade or sharp knife. Try to obtain a precise 90-degree angle (square).
2. Insert the fiber through the locking nut and into the connector until the core tip seats against the internal micro-lens.
3. Screw the connector locking nut down to a snug fit, locking the fiber in place.
