Description

The IF-E96 is a low-cost, high-speed, visible red LED housed in a "connector-less" style plastic fiber optic package. The output spectrum is produced by a GaAlAs die which peaks at 660 nm, one of the optimal transmission windows of PMMA plastic optical fiber. The device package features an internal micro-lens and a precision-molded PBT housing to maximize optical coupling into standard 1000 µm core plastic fiber cable.

Application Highlights

The performance/price ratio of the IF-E96 is particularly attractive for high volume design applications. The visible red output has low attenuation in PMMA plastic fiber and aids in troubleshooting installations. When used with an IF-D96 photologic detector the IF-E96 can achieve data rates of 5 Mbps. Fast transition times and low attenuation make the IF-E96 an excellent device selection for low cost analog and digital data links up to 75 meters.

Features

- High Performance at Low Cost
- Visible Red Output Aids Troubleshooting
- Low Transmission Loss with PMMA Plastic Fiber
- Fast Transition Times
- Mates with standard 1000 µm core jacketed plastic fiber cable
- No Optical Design required
- Internal Micro-Lens for Efficient Optical Coupling
- Inexpensive Plastic Connector Housing
- Connector-Less Fiber Termination
- Light-Tight Housing Provides Interference-Free Transmission
- RoHS Compliant

FIBER TERMINATION INSTRUCTIONS

1. Cut off the ends of the optical fiber with a single-edge razor blade or sharp knife. Try to obtain a precise 90-degree angle (square).
2. Insert the fiber through the locking nut and into the connector until the core tip seats against the internal micro-lens.
3. Screw the connector locking nut down to a snug fit, locking the fiber in place.
