

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**IR2110(-1-2)(S)PbF/IR2113(-1-2)(S)PbF**

**HIGH AND LOW SIDE DRIVER**

**Features**

- Floating channel designed for bootstrap operation  
 Fully operational to +500V or +600V  
 Tolerant to negative transient voltage  
 dV/dt immune
- Gate drive supply range from 10 to 20V
- Undervoltage lockout for both channels
- 3.3V logic compatible  
 Separate logic supply range from 3.3V to 20V  
 Logic and power ground  $\pm 5V$  offset
- CMOS Schmitt-triggered inputs with pull-down
- Cycle by cycle edge-triggered shutdown logic
- Matched propagation delay for both channels
- Outputs in phase with inputs

**Product Summary**

|                              |             |
|------------------------------|-------------|
| $V_{\text{OFFSET}}$ (IR2110) | 500V max.   |
| (IR2113)                     | 600V max.   |
| $I_{\text{O}+/-}$            | 2A / 2A     |
| $V_{\text{OUT}}$             | 10 - 20V    |
| $t_{\text{on/off}}$ (typ.)   | 120 & 94 ns |
| Delay Matching (IR2110)      | 10 ns max.  |
| (IR2113)                     | 20ns max.   |

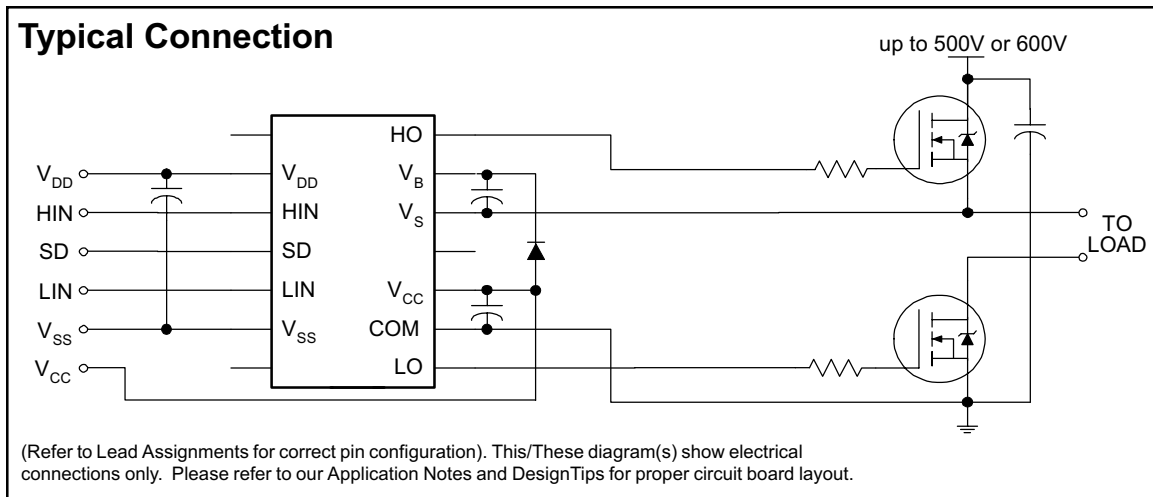

**Description**

The IR2110/IR2113 are high voltage, high speed power MOSFET and IGBT drivers with independent high and low side referenced output channels. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. Logic inputs are compatible with standard CMOS or LSTTL output, down to 3.3V logic. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. Propagation delays are matched to simplify use in high frequency applications. The floating channel can be used to drive an N-channel power MOSFET or IGBT in the high side configuration which operates up to 500 or 600 volts.

**Typical Connection**

# IR2110(-1-2)(S)PbF/IR2113(-1-2)(S)PbF

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions. Additional information is shown in Figures 28 through 35.

| Symbol              | Definition   | Min.                  | Max.                  | Units |      |
|---------------------|--|-----------------------|-----------------------|-------|------|
| V <sub>B</sub>      | High side floating supply voltage (IR2110)           | -0.3                  | 525                   | V     |      |
|                     | (IR2113)   | -0.3                  | 625                   |       |      |
| V <sub>S</sub>      | High side floating supply offset voltage             | V <sub>B</sub> - 25   | V <sub>B</sub> + 0.3  |       |      |
| V <sub>HO</sub>     | High side floating output voltage                    | V <sub>S</sub> - 0.3  | V <sub>B</sub> + 0.3  |       |      |
| V <sub>CC</sub>     | Low side fixed supply voltage                        | -0.3                  | 25                    |       |      |

| T <sub>L</sub>      | Lead temperature (soldering, 10 seconds)             | —                     | 300                   |       |      |

## Recommended Operating Conditions

The input/output logic timing diagram is shown in figure 1. For proper operation the device should be used within the recommended conditions. The V<sub>S</sub> and V<sub>SS</sub> offset ratings are tested with all supplies biased at 15V differential. Typical ratings at other bias conditions are shown in figures 36 and 37.

| Symbol          | Definition  | Min.                | Max.                 | Units |
|-----------------|---|---------------------|----------------------|-------|
| V <sub>B</sub>  | High side floating supply absolute voltage        | V <sub>S</sub> + 10 | V <sub>S</sub> + 20  | V     |
| V <sub>S</sub>  | High side floating supply offset voltage (IR2110) | Note 1              | 500                  |       |
|                 | (IR2113)  | Note 1              | 600                  |       |
| V <sub>HO</sub> | High side floating output voltage                 | V <sub>S</sub>      | V <sub>B</sub>       |       |
| V <sub>CC</sub> | Low side fixed supply voltage                     | 10                  | 20                   |       |
| V <sub>LO</sub> | Low side output voltage                           | 0                   | V <sub>CC</sub>      |       |
| V <sub>DD</sub> | Logic supply voltage                              | V <sub>SS</sub> + 3 | V <sub>SS</sub> + 20 |       |
| V <sub>SS</sub> | Logic supply offset voltage                       | -5 (Note 2)         | 5                    |       |
| V <sub>IN</sub> | Logic input voltage (HIN, LIN & SD)               | V <sub>SS</sub>     | V <sub>DD</sub>      |       |
| T <sub>A</sub>  | Ambient temperature                               | -40                 | 125                  | °C    |

Note 1: Logic operational for V<sub>S</sub> of -4 to +500V. Logic state held for V<sub>S</sub> of -4V to -V<sub>BS</sub>. (Please refer to the Design Tip DT97-3 for more details).

Note 2: When V<sub>DD</sub> < 5V, the minimum V<sub>SS</sub> offset is limited to -V<sub>DD</sub>.

## Dynamic Electrical Characteristics

$V_{BIAS}$  ( $V_{CC}$ ,  $V_{BS}$ ,  $V_{DD}$ ) = 15V,  $C_L$  = 1000 pF,  $T_A$  = 25°C and  $V_{SS}$  = COM unless otherwise specified. The dynamic electrical characteristics are measured using the test circuit shown in Figure 3.

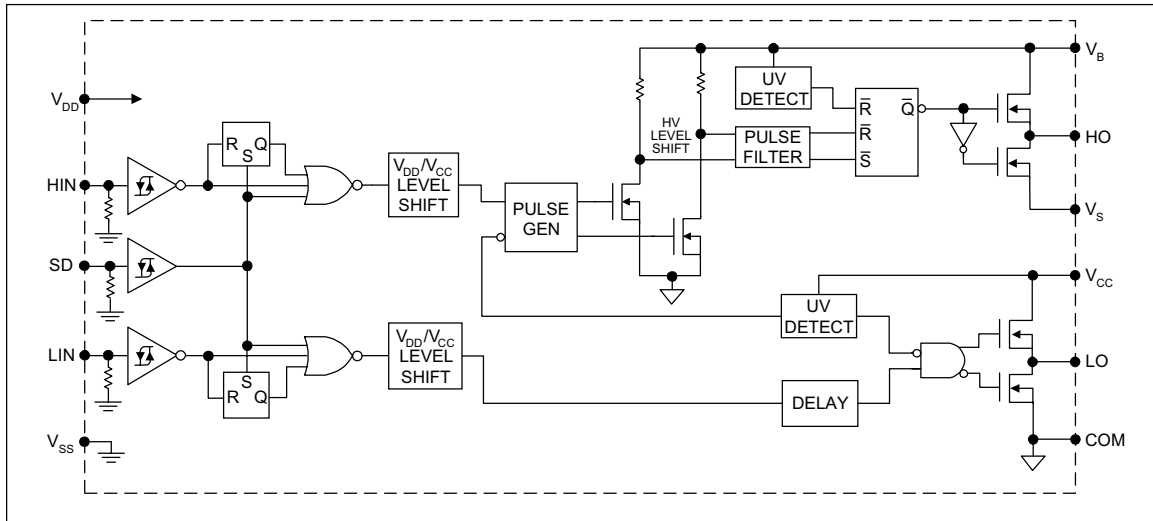

| Symbol    | Definition                          | Figure               | Min. | Typ. | Max. | Units | Test Conditions   |
|-----------|-------------------------------------|----------------------|------|------|------|-------|-------------------|
| $t_{on}$  | Turn-on propagation delay           | 7                    | —    | 120  | 150  | ns    | $V_S = 0V$        |
| $t_{off}$ | Turn-off propagation delay          | 8                    | —    | 94   | 125  |       | $V_S = 500V/600V$ |
| $t_{sd}$  | Shutdown propagation delay          | 9                    | —    | 110  | 140  |       | $V_S = 500V/600V$ |
| $t_r$     | Turn-on rise time                   | 10                   | —    | 25   | 35   |       |                   |
| $t_f$     | Turn-off fall time                  | 11                   | —    | 17   | 25   |       |                   |
| MT        | Delay matching, HS & LS turn-on/off | (IR2110)<br>(IR2113) | —    | —    | —    |       | 10<br>20          |

## Static Electrical Characteristics

$V_{BIAS}$  ( $V_{CC}$ ,  $V_{BS}$ ,  $V_{DD}$ ) = 15V,  $T_A$  = 25°C and  $V_{SS}$  = COM unless otherwise specified. The  $V_{IN}$ ,  $V_{TH}$  and  $I_{IN}$  parameters are referenced to  $V_{SS}$  and are applicable to all three logic input leads: HIN, LIN and SD. The  $V_O$  and  $I_O$  parameters are referenced to COM and are applicable to the respective output leads: HO or LO.
