## Description

HEXFET® power MOSFETs from International Rectifier utilize advanced processing techniques to achieve extremely low on-resistance per silicon area. This benefit, combined with the ruggedized device design, that International Rectifier is well known for, provides the designer with an extremely efficient and reliable device for use in battery and load management.

The TSSOP-8 package, has 45% less footprint area of the standard SO-8. This makes the TSSOP-8 an ideal device for applications where printed circuit board space is at a premium.

The low profile (<1.1mm) of the TSSOP-8 will allow it to fit easily into extremely thin application environments such as portable electronics and PCMCIA cards.
