

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

PD - 95821 IRL8113 IRL8113S IRL8113L HEXFET® Power MOSFET

Applications

 High Frequency Synchronous Buck Converters for Computer Processor Power

V _{DSS}	R _{DS(on)} max	Qg (Typ.)
30V	$\mathbf{6.0m}\Omega$	23nC

Benefits

- Low R_{DS(on)} at 4.5V V_{GS}
- Low Gate Charge
- Fully Characterized Avalanche Voltage and Current

Ter	Traff	Ser.
TO-220AB	D ² Pak	TO-262
IRL8113	IRL8113S	IRL8113L

Absolute Maximum Ratings

	Parameter	Max.	Units	
V_{DS}	Drain-to-Source Voltage	30	V	
V_{GS}	Gate-to-Source Voltage	± 20		
I _D @ T _C = 25°C	Continuous Drain Current, V _{GS} @ 10V	105 ©	А	
I _D @ T _C = 100°C	Continuous Drain Current, V _{GS} @ 10V	74 ⑥		
I _{DM}	Pulsed Drain Current ①	420		
P _D @T _C = 25°C	Maximum Power Dissipation	110	W	
$P_D @ T_C = 100^{\circ}C$	Maximum Power Dissipation	57		
	Linear Derating Factor	0.76	W/°C	
T _J	Operating Junction and	-55 to + 175	°C	
T _{STG}	Storage Temperature Range			
	Soldering Temperature, for 10 seconds	300 (1.6mm from case)		
	Mounting Torque, 6-32 or M3 screw @	10 lbf•in (1.1N•m)		

Thermal Resistance

	Parameter	Тур.	Max.	Units
$R_{\theta JC}$	Junction-to-Case ⑦		1.32	°C/W
$R_{\theta CS}$	Case-to-Sink, Flat Greased Surface @	0.50		
$R_{\theta JA}$	Junction-to-Ambient ⊕ ⑦		62	
$R_{\theta JA}$	Junction-to-Ambient (PCB Mount) ⑤⑦		40

Power MOSFET Selection for Non-Isolated DC/DC Converters

Control FET

Special attention has been given to the power losses in the switching elements of the circuit - Q1 and Q2. Power losses in the high side switch Q1, also called the Control FET, are impacted by the $R_{\rm ds(on)}$ of the MOSFET, but these conduction losses are only about one half of the total losses.

Power losses in the control switch Q1 are given by;

$$P_{loss} = P_{conduction} + P_{switching} + P_{drive} + P_{output}$$

This can be expanded and approximated by;

$$\begin{split} P_{loss} &= \left(I_{rms}^{2} \times R_{ds(on)}\right) \\ &+ \left(I \times \frac{Q_{gd}}{i_{g}} \times V_{in} \times f\right) + \left(I \times \frac{Q_{gs2}}{i_{g}} \times V_{in} \times f\right) \\ &+ \left(Q_{g} \times V_{g} \times f\right) \\ &+ \left(\frac{Q_{oss}}{2} \times V_{in} \times f\right) \end{split}$$

This simplified loss equation includes the terms Q_{gs2} and Q_{oss} which are new to Power MOSFET data sheets.

 Q_{gs2} is a sub element of traditional gate-source charge that is included in all MOSFET data sheets. The importance of splitting this gate-source charge into two sub elements, Q_{gs1} and Q_{gs2} , can be seen from Fig 16.

 Q_{gs2} indicates the charge that must be supplied by the gate driver between the time that the threshold voltage has been reached and the time the drain current rises to I_{dmax} at which time the drain voltage begins to change. Minimizing Q_{gs2} is a critical factor in reducing switching losses in Q1.

 $\rm Q_{\rm oss}$ is the charge that must be supplied to the output capacitance of the MOSFET during every switching cycle. Figure A shows how $\rm Q_{\rm oss}$ is formed by the parallel combination of the voltage dependant (nonlinear) capacitance's $\rm C_{\rm ds}$ and $\rm C_{\rm dg}$ when multiplied by the power supply input buss voltage.

Synchronous FET

The power loss equation for Q2 is approximated by;

$$\begin{split} P_{loss} &= P_{conduction} + P_{drive} + P_{output}^* \\ P_{loss} &= \left(I_{rms}^2 \times R_{ds(on)}\right) \\ &+ \left(Q_g \times V_g \times f\right) \\ &+ \left(\frac{Q_{oss}}{2} \times V_{in} \times f\right) + \left(Q_{rr} \times V_{in} \times f\right) \end{split}$$

*dissipated primarily in Q1.

For the synchronous MOSFET Q2, $R_{\text{ds(on)}}$ is an important characteristic; however, once again the importance of gate charge must not be overlooked since it impacts three critical areas. Under light load the MOSFET must still be turned on and off by the control IC so the gate drive losses become much more significant. Secondly, the output charge Q_{oss} and reverse recovery charge Q_{rr} both generate losses that are transfered to Q1 and increase the dissipation in that device. Thirdly, gate charge will impact the MOSFETs' susceptibility to Cdv/dt turn on.

The drain of Q2 is connected to the switching node of the converter and therefore sees transitions between ground and $V_{\rm in}.$ As Q1 turns on and off there is a rate of change of drain voltage dV/dt which is capacitively coupled to the gate of Q2 and can induce a voltage spike on the gate that is sufficient to turn the MOSFET on, resulting in shoot-through current . The ratio of $Q_{\rm gd}/Q_{\rm gs1}$ must be minimized to reduce the potential for Cdv/dt turn on.

TO-262 Part Marking Information

D²Pak Tape & Reel Information

Notes:

- ① Repetitive rating; pulse width limited by max. junction temperature.
- ② Starting $T_J = 25$ °C, L = 1.58mH, $R_G = 25$ Ω, $I_{AS} = 21$ A.
- 3 Pulse width $\leq 400 \mu s$; duty cycle $\leq 2\%$.
- ④ This is only applied to TO-220AB pakcage.
- ⑤ This is applied to D²Pak, when mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994.
- © Calculated continuous current based on maximum allowable junction temperature. Package limitation current is 42A.
- ⑦ R_θ is measured at T_J approximately 90°C

TO-220AB package is not recommended for Surface Mount Application.

Data and specifications subject to change without notice.

This product has been designed and qualified for the Industrial market.

Qualification Standards can be found on IR's Web site.
