IRM-36xx SERIES

Test Method:

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

①Measurement place

A place that is nothing of extreme light reflected in the room.

②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. (Ee \leq 10Lux)

Standard transmitter

A transmitter whose output is so adjusted as to **Vo=400mVp-p** and the output Wave form shown in Fig.-1.According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However, the infrared photodiode to be used for the transmitter should be $\lambda p=940$ nm, $\Delta \lambda=50$ nm. Also, photodiode is used of PD438B(Vr=5V). (Standard light / Light source temperature 2856°K).

Measuring system

According to the measuring system shown in Fig.-3

IRM-36xx SERIES

The Notice of Application: (IRM-36xx SERIES)

Transmission remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

- 1. When IRM-36xx SERIES code select frequency, it need to well understand the center system of encode part.
- 2. Strong or weak light of IR Transmitter can affect distance of transmission.
- 3. Minimum Burst Length Tburst (number of pulses per burst): 6 or 10 cycles
- 4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.
- 5. IRM-36xx SERIES can be applied to the high data codes, but against disturbance slightly weak.

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.
