

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**HIGH SIDE & DUAL LOW SIDE DRIVER IC**

**Features**

- 2 low side output channels sharing common ground
- 1 high side output channel
- CMOS Schmitt trigger inputs with pull down resistor
- Under voltage lockout on all channels
- 5 V compatible logic level Inputs
- Immune to  $-V_s$  spike and tolerant to  $dV_s/dt$  &  $dV_{ss}/dt$
- Shoot through prevention logic

**Descriptions**

The IRS21953 contains 2 low side outputs sharing common ground and 1 high side output. Low side drivers can tolerate up to -600 V below input signal (VSS: input supply return). High side driver can tolerate up to 600 V above low side ground (COM: low side supply return). The IRS21953 has better propagation delay and thermal characteristics compared to a photo-coupler driver. The logic inputs are compatible with standard CMOS or LSTTL output. Proprietary HVIC and latch-up immune CMOS technologies enable ruggedized monolithic construction.

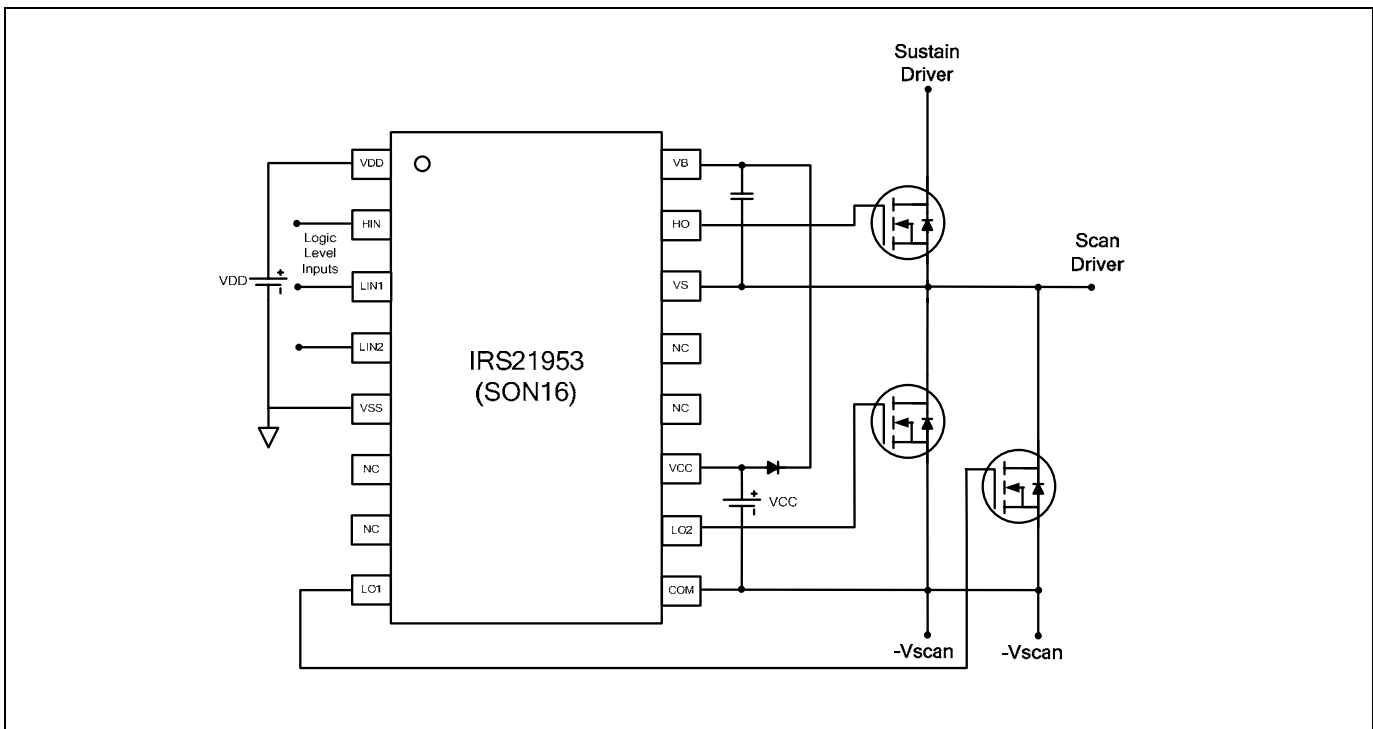

**Product Summary**

$V_{\text{OFFSET}}$ (low side)	-600 V (VSS)
$V_{\text{OFFSET}}$ (high side)	600 V (COM)
$V_{\text{OUT}}$	10 V to 20 V
$t_{\text{on}}/t_{\text{off}}$ (typ)	380 ns/380 ns
$I_{\text{o+/-}}$	0.5 A/0.5 A

**Absolute Maximum Ratings**

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM.
