# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## International **TCR** Rectifier

### IRS2301S HIGH AND LOW SIDE DRIVER

### Features

- Floating channel designed for bootstrap operation
- Fully operational to +600V
- Tolerant to negative transient voltage dV/dt immune
- Gate drive supply range from 5V to 20V
- Undervoltage lockout for both channels
- 3.3V, 5V and 15V input logic compatible
- Matched propagation delay for both channels
- Outputs in phase with inputs
- Lower di/dt gate driver for better noise immunity
- Leadfree, RoHS compliant

#### **Typical Applications**

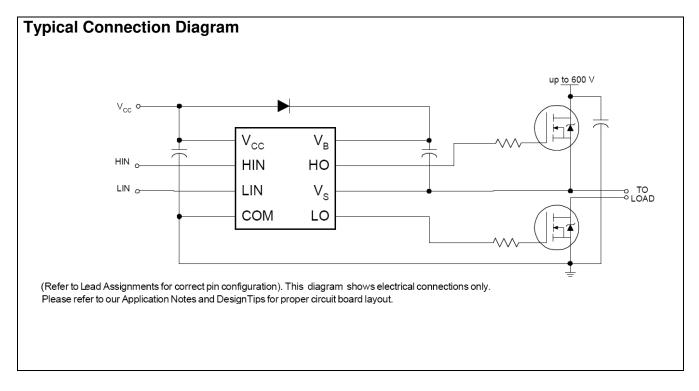

- Appliance motor drives
- Servo drives
- o Micro inverter drives
- o General purpose three phase inverters

### Product Summary

| V <sub>OFFSET</sub>                          | 600V Max      |
|--|---------------|
| V <sub>OUT</sub>                             | 5V – 20V      |
| I <sub>o+</sub> & I <sub>o-</sub> (min)      | 120mA / 250mA |
| t <sub>on</sub> & t <sub>off</sub> (typical) | 220ns / 200ns |
| Delay Matching                               | 50ns          |

## International

### Description

The IRS2301S is a high voltage, high speed power MOSFET and IGBT driver with independent high- and lowside referenced output channels. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. The logic input is compatible with standard CMOS or LSTTL output, down to 3.3V logic. The output drivers feature a high pulse current buffer stage. The floating channel can be used to drive an Nchannel power MOSFET or IGBT in the high-side configuration which operates up to 600V.

† Qualification standards can be found at International Rectifier's web site <u>http://www.irf.com/</u>

++ Higher qualification ratings may be available should the user have such requirements. Please contact your International Rectifier sales representative for further information.

+++ Higher MSL ratings may be available for the specific package types listed here. Please contact your International Rectifier sales representative for further information.

### **Absolute Maximum Ratings**

Absolute Maximum Ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

| Symbol              | Definition   | Min.                | Max.                  | Units |  |
|---------------------|--|---------------------|-----------------------|-------|--|
| V <sub>B</sub>      | High-side floating absolute voltage                | -0.3                | 625                   |       |  |
| Vs                  | High-side floating supply offset voltage           | V <sub>B</sub> -25  | V <sub>B</sub> + 0.3  |       |  |

### **Recommended Operating Conditions**

The input/output logic timing diagram is shown in Fig. 1. For proper operation the device should be used within the recommended conditions. The  $V_s$  offset rating is tested with all supplies biased at 15V differential.

| Symbol          | Definition  | Min.              | Max.                | Units |  |  |
|-----------------|---|-------------------|---------------------|-------|--|--|
| V <sub>B</sub>  | High-side floating supply absolute voltage                      | V <sub>S</sub> +5 | V <sub>S</sub> + 20 |       |  |  |
| Vs              | High-side floating supply offset voltage                        | †1                | 600                 | 600   |  |  |
| V <sub>HO</sub> | High-side floating output voltage V <sub>S</sub> V <sub>B</sub> |                   |                     |       |  |  |
| V <sub>CC</sub> | Low-side and logic fixed supply voltage 5 20                    |                   |                     |       |  |  |
| V <sub>LO</sub> | Low-side output voltage 0 V <sub>cc</sub>                       |                   |                     |       |  |  |
| V <sub>IN</sub> | Logic input voltage (HIN & LIN)                                 | COM               | V <sub>CC</sub>     |       |  |  |
| T <sub>A</sub>  | Ambient temperature   | -40               | 125                 | °C    |  |  |

 Logic operational for V<sub>S</sub> of -5 V to +600 V. Logic state held for V<sub>S</sub> of -5 V to - V<sub>BS</sub>. (Please refer to the Design Tip DT97 -3 for more details).

### **Static Electrical Characteristics**

 $V_{BIAS}$  (V<sub>CC</sub>, V<sub>BS</sub>) = 15V and T<sub>A</sub> = 25°C unless otherwise specified. The V<sub>IL</sub>, V<sub>IH</sub> and I<sub>IN</sub> parameters are referenced to COM and are applicable to the respective input leads: HIN and LIN. The V<sub>O</sub>, I<sub>O</sub> and R<sub>on</sub> parameters are referenced to COM and are applicable to the respective output leads: HO and LO.

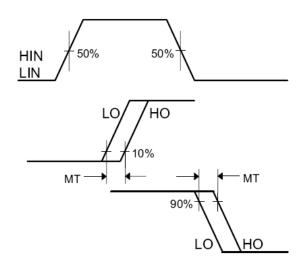

Figure 3: Delay Matching Waveform Definitions

### **Tolerability to Negative VS Transients**

The IRS2301S has been seen to withstand negative Vs transient conditions on the order of -25V for a period of 100 ns ( $V_{BIAS}$  ( $V_{CC}$ ,  $V_{BS}$ ) = 15V and  $T_A$  = 25°C).

An illustration of the IRS2301S performance can be seen in Figure 4.

Even though the IRS2301S has been shown able to handle these negative Vs transient conditions, it is highly recommended that the circuit designer always limit the negative Vs transients as much as possible by careful PCB layout and component use.
