

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

RECOMMENDED REPLACEMENT PART
ISL9001A**

LDO with Low I_{SUPPLY} , High PSRR

ISL9001 is a high performance Low Dropout linear regulator capable of sourcing 300mA current. It has a low standby current and high-PSRR and is stable with an output capacitance of 1 μ F to 10 μ F with an ESR of up to 200m Ω .

The ISL9001 has a very high PSRR of 90dB and outputs noise less than 30 μ V_{RMS}. A reference bypass pin allows connection of a noise-filtering capacitor for low-noise and high-PSRR applications. When coupled with a no load quiescent current of 25 μ A (typical), and 0.1 μ A shutdown current, the ISL9001 is an ideal choice for portable wireless equipment.

The ISL9001 provides a power-good signal with delay time programmable with an external capacitor.

Several different fixed voltage outputs are standard. Output voltage options for each LDO range are from 1.5V to 3.3V. Other output voltage options may be available upon request.

Pinout

Features

- 300mA high performance LDO
- Excellent transient response to large current steps
- Excellent load regulation: <0.1% voltage change across full range of load current
- High PSRR: 90dB @ 1kHz
- Wide input voltage capability: 2.3V to 6.5V
- Extremely low quiescent current: 25 μ A
- Low dropout voltage: typically 200mV @ 300mA
- Low output noise: typically 30 μ V_{RMS} @ 100 μ A (1.5V)
- Stable with 1 μ F to 10 μ F ceramic capacitors
- Soft-start to limit input current surge during enable
- Current limit and overheat protection
- Delayed POR, programmable with external capacitor
- \pm 1.8% accuracy over all operating conditions
- Tiny 2mmx3mm 8 Ld DFN package
- -40°C to +85°C operating temperature range
- Pb-free (RoHS compliant)

Applications

- PDAs, cell phones and smart phones
- Portable instruments, MP3 players
- Handheld devices, including medical handhelds

ISL9001

NOTES:

1. These Intersil Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate PLUS ANNEAL - e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
2. Please refer to TB347 for details on reel specifications.
3. For other output voltages, contact Intersil Marketing.

Absolute Maximum Ratings

Supply Voltage (VIN)	+7.1V
VO Pin	+3.6V
All Other Pins	-0.3 to (VIN+0.3)V
ESD Rating	
Human Body Model (Per MIL-STD-883 Method 3015.7)	2500V
Machine Model (Per EIAJ ED-4701 Method C-111)	200V

Thermal Information

Thermal Resistance (Notes 4, 5)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
8 Ld 2x3 DFN Package	69	10
Junction Temperature Range	-40°C to +125°C	
Operating Temperature Range	-40°C to +85°C	
Storage Temperature Range	-65°C to +150°C	
Pb-free reflow profile	see link below	
	http://www.intersil.com/pbfree/Pb-FreeReflow.asp	

Recommended Operating Conditions

Ambient Temperature Range (TA)	-40°C to +85°C
Supply Voltage (VIN)	2.3V to 6.5V

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See Tech Brief TB379.
- For θ_{JC} , the “case temp” location is the center of the exposed metal pad on the package underside.

Electrical Specifications

Unless otherwise noted, all parameters are guaranteed over the operational supply voltage and temperature range of the device as follows: TA = -40°C to +85°C; VIN = (VO + 0.5V) to 5.5V with a minimum VIN of 2.3V; CIN = 1µF; CO = 1µF.

PARAMETER	SYMBOL	TEST CONDITIONS	MIN (Note 8)	TYP	MAX (Note 8)	UNITS
DC CHARACTERISTICS						
Supply Voltage	VIN		2.3		6.5	V
Ground Current	IDD	Quiescent condition: IO = 0µA				
		LDO active		25	32	µA
Shutdown Current	IDDS	LDO disabled @ +25°C		0.1	1.0	µA

Pin Description

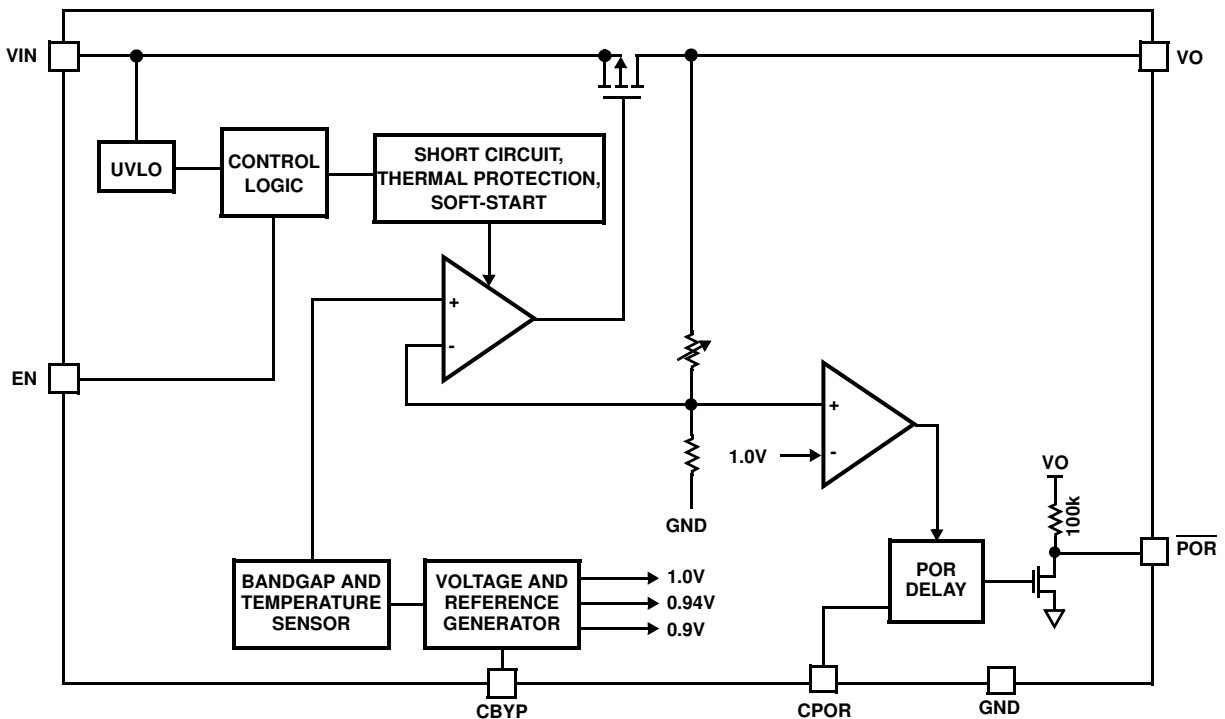

PIN NUMBER	PIN NAME	DESCRIPTION
1	VIN	Supply Voltage/LDO Input: Connect a 1 μ F capacitor to GND.
2	EN	LDO Enable.
3	CBYP	Reference Bypass Capacitor Pin: Optionally connect capacitor of value 0.01 μ F to 0.1 μ F between this pin and GND to achieve lowest noise and highest PSRR.
4	CPOR	POR Delay Setting Capacitor Pin: Connect a capacitor between this pin and GND to delay the $\overline{\text{POR}}$ output release after the output reaches 94% of its specified voltage level. (200ms delay per 0.01 μ F).
5	GND	GND is the connection to system ground. Connect to PCB Ground plane.
6	NC	Do not connect.
7	$\overline{\text{POR}}$	Open-drain POR Output (active-low): Internally connected to VO through 100k Ω resistor.
8	VO	LDO Output: Connect capacitor of value 1 μ F to 10 μ F to GND (1 μ F recommended).

Typical Application

- C1, C3: 1 μ F X5R CERAMIC CAPACITOR
- C2: 0.1 μ F X7R CERAMIC CAPACITOR
- C4: 0.01 μ F X7R CERAMIC CAPACITOR

Block Diagram

Functional Description

The ISL9001 contains all circuitry required to implement a high performance LDO. High performance is achieved through a circuit that delivers fast transient response to varying load conditions. In a quiescent condition, the ISL9001 adjusts its biasing to achieve the lowest standby current consumption.

The device also integrates current limit protection, smart thermal shutdown protection, and soft-start. Smart Thermal shutdown protects the device against overheating.

Power Control

The ISL9001 has an enable pin (EN) to control power to the LDO output. When EN is low, the device is in shutdown mode. During this condition, all on-chip circuits are off, and the device draws minimum current, typically less than 0.1 μ A. When the enable pin is asserted, the device first polls the output of the UVLO detector to ensure that VIN voltage is at least about 2.1V. Once verified, the device initiates a start-up sequence. During the start-up sequence, trim settings are first read and latched. Then, sequentially, the bandgap, reference voltage and current generation circuitry power-up. Once the references are stable, a fast-start circuit quickly charges the external reference bypass capacitor (connected to the CBYP pin) to the proper operating voltage. Once the bypass capacitor has been charged, the LDO powers up.

During operation, whenever the VIN voltage drops below about 1.84V, the ISL9001 immediately disables the LDO output. When VIN rises back above 2.1V, the device re-initiates its start-up sequence and LDO operation will resume automatically.

Reference Generation

The reference generation circuitry includes a trimmed bandgap, a trimmed voltage reference divider, a trimmed current reference generator, and an RC noise filter. The filter includes the external capacitor connected to the CBYP pin. A 0.01 μ F capacitor connected to CBYP implements a 100Hz lowpass filter, and is recommended for most high performance applications. For the lowest noise application, a 0.1 μ F CBYP capacitor should be used. This filters the reference noise to below the 10Hz to 1kHz frequency band, which is crucial in many noise-sensitive applications.

The bandgap generates a zero temperature coefficient (TC) voltage for the reference divider. The reference divider provides the regulation reference, POR detection thresholds, and other voltage references required for current generation and over-temperature detection.

The current generator outputs references required for adaptive biasing as well as references for LDO output current limit and thermal shutdown determination.

LDO Regulation and Programmable Output Divider

The LDO Regulator is implemented with a high-gain operational amplifier driving a PMOS pass transistor. The design of the ISL9001 provides a regulator that has low quiescent current, fast transient response, and overall stability across all operating and load current conditions. LDO stability is guaranteed for a 1 μ F to 10 μ F output capacitor that has a tolerance better than 20% and ESR less than 200m Ω . The design is performance-optimized for a 1 μ F capacitor. Unless limited by the application, use of an output capacitor value above 4.7 μ F is not recommended as LDO performance improvement is minimal.

Soft-start circuitry integrated into each LDO limits the initial ramp-up rate to about 30 μ s/V to minimize current surge. The ISL9001 provides short-circuit protection by limiting the output current to about 425mA.

The LDO uses an independently trimmed 1V reference as its input. An internal resistor divider drops the LDO output voltage down to 1V. This is compared to the 1V reference for regulation. The resistor division ratio is programmed in the factory.

Power-On Reset Generation

The ISL9001 has a Power-on Reset signal generation circuit, which indicates that output power is good. The POR signal is generated as follows.

A POR comparator continuously monitors the output of the LDO. The LDO enters a power-good state when the output voltage is above 94% of the expected output voltage for a period exceeding the LDO PGOOD entry delay time (see the following). In the power-good state, the open-drain $\overline{\text{POR}}$ output is in a high-impedance state. An internal 100k Ω pull-up resistor pulls the pin up to the LDO output voltage. An external resistor can be added between the $\overline{\text{POR}}$ output and the LDO output for a faster rise time, however, the $\overline{\text{POR}}$ output should not connect through an external resistor to a supply greater than the LDO voltage.

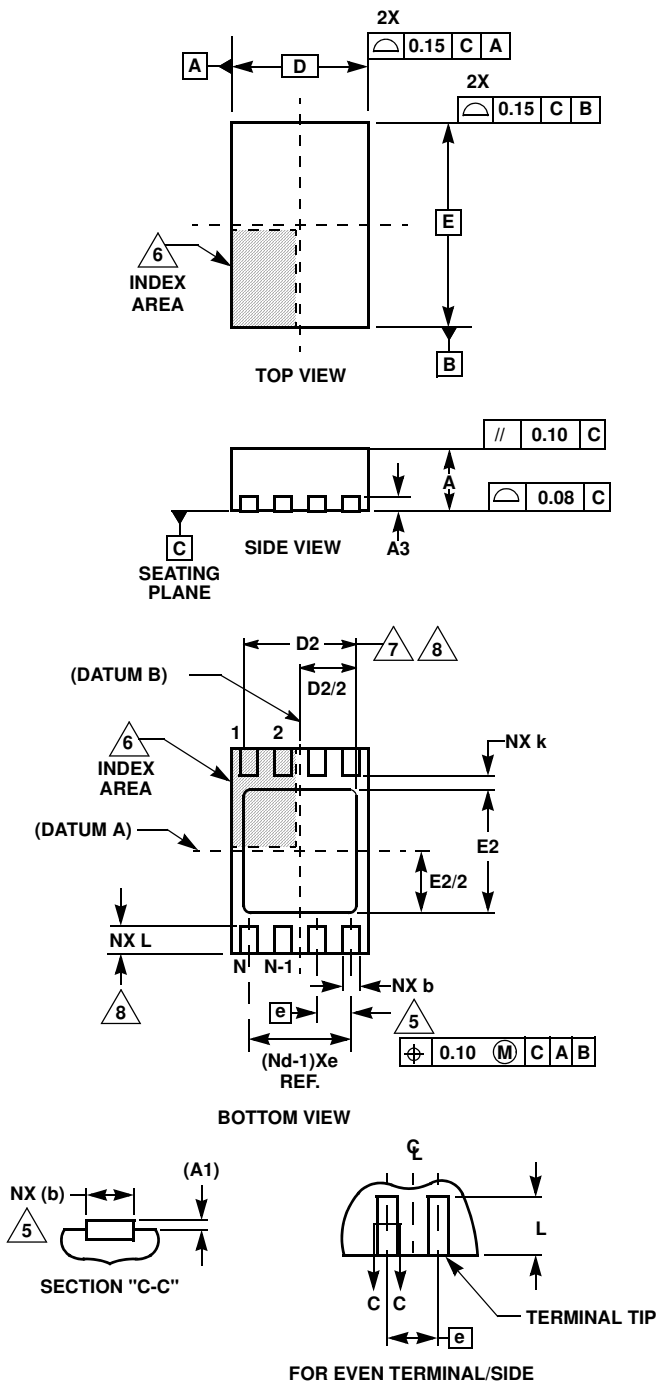

The power-good state is exited when the LDO output falls below 90% of the expected output voltage for a period longer than the PGOOD exit delay time. While power-good is false, the ISL9001 pulls the POR pin low.

The PGOOD entry and exit delays are determined by the value of an external capacitor connected to the CPOR pin. For a 0.01 μ F capacitor, the entry and exit delays are 200ms and 25 μ s respectively. Larger or smaller capacitor values will yield proportionately longer or shorter delay times. The POR exit delay should never be allowed to be less than 10 μ s to ensure sufficient immunity against transient induced false POR triggering.

Overheat Detection

The bandgap outputs a proportional-to-temperature current that is indicative of the temperature of the silicon. This current is compared with references to determine if the device is in danger of damage due to overheating. When the die temperature reaches about +140 $^{\circ}$ C, if the LDO is sourcing more than 50mA it shuts down until the die cools sufficiently. Once the die temperature falls back below about +110 $^{\circ}$ C, the disabled LDO is re-enabled and soft-start automatically takes place.

NOTES:

1. Dimensioning and tolerancing conform to ASME Y14.5-1994.
2. N is the number of terminals.
3. Nd refers to the number of terminals on D.
4. All dimensions are in millimeters. Angles are in degrees.
5. Dimension b applies to the metallized terminal and is measured between 0.25mm and 0.30mm from the terminal tip.
6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
7. Dimensions D2 and E2 are for the exposed pads which provide improved electrical and thermal performance.
8. Nominal dimensions are provided to assist with PCB Land Pattern Design efforts, see Intersil Technical Brief TB389.

All Intersil U.S. products are manufactured, assembled and tested utilizing ISO9000 quality systems. Intersil Corporation's quality certifications can be viewed at www.intersil.com/design/quality
