Glass Axial Switching Diode

Qualified per MIL-PRF-19500/116

DESCRIPTION

This popular 1N4148-1 JEDEC registered switching/signal diode features internal metallurgical bonded construction for military grade products per MIL-PRF-19500/116. This small low capacitance diode, with very fast switching speeds, is hermetically sealed and bonded into a double-plug DO-35 package. It may be used in a variety of very high speed applications including switchers, detectors, transient OR'ing, logic arrays, blocking, as well as low-capacitance steering diodes, etc. Microsemi also offers a variety of other switching/signal diodes.

SYMBOLS & DEFINITIONS					
Symbol	Definition				
I _R	Reverse Current: The maximum reverse (leakage) current that will flow at the specified voltage and temperature.				
lo	Average Rectified Forward Current: The output current averaged over a full cycle with a 50 Hz or 60 Hz sine-wave input and a 180 degree conduction angle.				
t _{rr}	Reverse Recovery Time: The time interval between the instant the current passes through zero when changing from the forward direction to the reverse direction and a specified decay point after a peak reverse current occurs.				
VF	Forward Voltage: The forward voltage the device will exhibit at a specified current (typically shown as maximum value).				
V _R	Reverse Voltage: The reverse voltage dc value, no alternating component.				
V _{RWM}	Working Peak Reverse Voltage: The maximum peak voltage that can be applied over the operating temperature range excluding all transient voltages (ref JESD282-B). Also sometimes known as PIV.
