# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# Warning

- 1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
- 2. Customer agrees to indemnity, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

# Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

# 1. Application

This document defines the specification of KCG075VG2BE-G000. (RoHS Compliant)

#### 2. Construction and outline

LCD	: Transmissive color dot matrix type STN
Duty ratio	: 1/482 duty
Backlight system	CFL (2 tubes, Straight type)
Inverter	: Option
Recommended inverter	: CXA-0217(TDK) or equivalent
Polarizer	: Glare treatment
Additional circuit	: Bias voltage circuit, Randomizing circuit,
	DC/DC converter circuit, Temperature compensation circuit

# 3. Mechanical specifications

Item	Specification	Unit
Outline dimensions	$184 \text{ (W)} \times 139.8 \text{ (H)} \times 12.7 \text{ (D)}$	mm
Active area	151.66 (W) × 113.74 (H) (19.0cm / 7.5 inch (Diagonal))	mm
Effective viewing area	$153.7 \text{ (W)} \times 115.8 \text{ (H)}$	mm
Dot format	$640 \times (R,G,B) (W) \times 480 (H)$	dot
Dot size	$0.059 \text{ (W)} \times 0.217 \text{ (H)}$	mm
Dot pitch	$0.079 \text{ (W)} \times 0.237 \text{ (H)}$	mm
Base color *1	Normally Black	-
Mass	280	g

\*1 Due to the characteristics of the LCD material, the color varies with environmental temperature.

#### 4. Absolute maximum ratings

4-1. Electrical absolute maximum ratings

Item	Symbol	Min.	Max.	Unit
Supply voltage for logic	$V_{DD}$	0	6.0	V
Supply voltage for LCD driving	VCONT	0	$V_{DD}$	V
Input signal voltage *1	$V_{\rm IN}$	0	$V_{DD}$	V
FRM frequency	$\mathbf{f}_{\mathrm{FRM}}$	-	120	Hz

#### \*1 Input signal : FRM, LOAD, CP, DISP, D0~D7

4-2. Environmental absolute maximum ratings

Item		Symbol	Min.	Max.	Unit
Operating temperature	*1	Тор	0	60	°C
Storage temperature	*2	Тято	-20	60	°C
Operating humidity	*3	H <sub>OP</sub>	10	*4	%RH
Storage humidity	*3	Hsto	10	*4	%RH
Vibration		-	*5	*5	-
Shock		-	*6	*6	-

\*1 Operating temperature means a temperature which operation shall be guaranteed. Since display performance is evaluated at 25°C, another temperature range should be confirmed.

\*2 Temp. = -20°C < 48h , Temp. = 60°C < 168h Store LCD panels at normal temperature/humidity. Keep them free from vibration and shock. An LCD panel that is kept at a low or a high temperature for a long time can be defective due to

other conditions, even if the low or high temperature satisfies the standard.

(Please refer to "Precautions for Use" for details.)

- \*3 Non-condensing
- \*4 Temp. ≦ 40°C, 85%RH Max.

Temp. > 40°C, Absolute humidity shall be less than 85%RH at 40°C.

\*5

Frequency	10 ~ 55 Hz	Acceleration value
Vibration width	0.15mm	$(0.3 \sim 9 \text{ m/s}^2)$
Interval	10-55-10	Hz 1 minutes

2 hours in each direction X, Y, Z (6 hours total) EIAJ ED-2531

\*6 Acceleration: 490 m/s<sup>2</sup>, Pulse width: 11 ms

3 times in each direction: ±X, ±Y, ±Z EIAJ ED-2531

~~~~

#### 5. Electrical characteristics

 $5-1. V_{DD} = 5.0 V$ 

|                                |                            |                      | V <sub>DD</sub> : | $= +5.0V \pm 5\%$ | 5, Temp. = (    | )~60°C |

| Clock frequency                | $\mathbf{f}_{\mathrm{CP}}$ | -                    | -                 | -                 | 10.0            | MHz    |
| Frame frequency *4             | ${ m f_{FRM}}$             | -                    | 70                | 75                | 80              | Hz     |
| Current consumption for logic  | Idd                        | *5                   | -                 | 62                | 80              | mA     |
| Power consumption              | $P_{DISP}$                 | .9                   | -                 | 310               | 400             | mW     |

- \*1 The supply voltage ( $V_{CONT} = V_{OP}$ ) to drive the display has individual difference. Please adjust the contrast to be most suitable.
- \*2 Frame frequency : f<sub>FRM</sub> = 75Hz
- \*3 The LCD module has a temperature compensation circuit.
- \*4 In consideration of display quality, it is recommended that frame frequency be set in the range of 70-80Hz. When you have to use higher frame and clock frequencies, confirm the LCD's performance and quality prior to finalizing the frequency value. Generally, as frame and clock frequencies become higher current consumption increases and display quality will degrade.

#### \*5 Display pattern:

 $V_{DD} = 5.0V, V_{CONT} = V_{OP}, f_{FRM} = 75Hz, f_{CP} = 8.68MHz, Temp. = 25^{\circ}C$ 123456...••• 1920(dot) 1  $\mathbf{2}$ 3 П пп 479480 (dot)

\* We recommend that you should set 1/482 duty so as to get high LCD's display quality.

# 6. Optical characteristics

Measuring spot = $\varphi$  6.0mm, Temp. = 25°C

Optimum contrast is obtained by adjusting the LCD driving voltage (Vop) while at the viewing angle of  $\theta = \phi = 0^{\circ}$ .

6-1. Definition of contrast ratio

CR(Contrast ratio) = Brightness with all pixels "White" Brightness with all pixels "Black"

6-2. Definition of VOP

# 6-3. Definition of response time Bl ack White

### 6-4. Definition of viewing angle

φ direction

#### 6-5. Brightness measuring points

- 1) Rating is defined on the average in the viewing area.
- 2) Measured 30 minutes after the CFL is powered on. (Ambient temp. =  $25^{\circ}$ C)
- 3) The inverter should meet the CFL rating in the specification:

-Sine, symmetric waveform without spike in positive and negative.

| LOAD "H" pulse width             |                    | tWLPH               | 80              | -          | ns     |
| LOAD "L" pulse width             |                    | tWLPL               | 400             | -          | ns     |
| LOAD cycle                       | *2                 | tLCL                | 500             | -          | ns     |
| $CP \rightarrow LOAD$ delay time |                    | tCDLD               | 60              | -          | ns     |
| $LOAD \rightarrow CP$ delay time |                    | tLDCR               | 80              | -          | ns     |
| Input signal rise up time        |                    | tr                  | -               | 20         | ns     |
| Input signal fall down time      |                    | tf                  | -               | 20         | ns     |
| FRM data set up time             |                    | tFS                 | 70              | -          | ns     |
| FRM data hold time               |                    | tFH                 | 70              | -          | ns     |

 $^{*1}$  CP cycle is adjusted so that FRM signal is 75Hz.

\*2 LOAD cycle is constant.

# 12. Supply voltage sequence condition

In normal operation, logic within the LCD module reverses the polarity of the drive voltage every few lines to prevent DC damage to the liquid crystal material. But when a voltage is present on  $V_{\text{CONT}}$  outside of the time when the  $V_{\text{DD}}$  logic voltage is stable, a drive voltage is applied to the liquid crystal material without the polarity reversals. This sometimes result in a deterioration of display quality and a reduction in life time.

\* Input signal: FRM, LOAD, CP, D0 ~ D7

- \* The above sequence should be designed as to maintain each normal voltage when the liquid crystal module load is applied to your system.
- \* Control the supply voltage sequence to not float any signal line when the LCD panel is being driven.

#### 13. Backlight characteristics

| Item                       | Symbol | Min.   | Тур.   | Max.  | Unit  | Note        |
|----------------------------|--------|--------|--------|-------|-------|-------------|
| Starting discharge voltage | VS     | -      | -      | 1,100 | Vrms  | 0°C         |
| *1                         | Vð     | -      | -      | 725   | Vrms  | 25°C        |
| Discharge tube current *2  | IL     | 2.0    | 4.0    | 6.0   | mArms | -           |
| Discharge tube voltage     | VL     | -      | 440    | -     | Vrms  | IL=4.0mArms |
| Operating life time *3     | Т      | 45,000 | 58,000 | -     | h     | IL=4.0mArms |
| Operating frequency        | F      | 40     | -      | 100   | kHz   | -           |

CFL ratings

\*1 The non-load output voltage (VS) of the inverter should be at least 1.3 times the maximum VS at low temperatures to provide enough margins to assure that the CFL will start, because actual VS may increase due to leakage current from the CFL cables. (Reference value: 1,430 Vrms Min.)

\*2 We recommend that you should set the discharging tube current lower than the typical value to prevent the accumulated heat of the CFL tube from deteriorating the performance of the LCD.

\*3 Defined as when the luminance or quantity of light has decreased to 50% of the initial value. The average life of a CFL will decrease when the LCD is operating at lower temperatures.

\* Prolonged storage in darkness and/or at low temperature may slow the ignition and rise to full brightness of the CFL. Please use an inverter designed to provide sufficient starting voltage for more than 1 second. Also a decreased starting discharge voltage or shortened ignition time may not turn on the CFL lamp.

 $\downarrow$ 6

#### 14. Lot number identification

The lot number shall be indicated on the back of the backlight case of each LCD.

| $\downarrow$ | $\downarrow\downarrow\downarrow$ | $\downarrow$ | $\downarrow$ |

#### 15. Warranty

#### 15-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

#### 15-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

### 16. Precautions for use

- 16-1. Installation of the LCD
  - 1) The Metal frame of the LCD module is not grounded. You can use the M2 burring, which is located on the right side of the LCD module, for the grounding purpose, if necessary.
  - 2) A transparent protection plate shall be added to protect the LCD and its polarizer.
  - 3) The LCD shall be installed so that there is no pressure on the LSI chips.
  - 4) The LCD shall be installed flat, without twisting or bending.
  - 5) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
  - 6) Please refer to the following our recommendable value of Clamp-down torque when installing. Clamp-down torque : 0.32±0.03N·m Please set up 'SPEED-LOW', 'SOFT START-SLOW' when using electric driver. Recommendable screw JIS tapping screw two types nominal dia.3.0mm installing boss hole depth 5.5mm Max Please be careful not to use high torque which may damage LCD module in installation.
    5) A lease be careful not to use high torque which may damage LCD module in installation.
  - 7) A transparent protection sheet is attached to the polarizer. Please remove the protection film slowly before use, paying attention to static electricity.
- 16-2. Static electricity
  - 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
  - 2) Workers should use body grounding. Operator should wear ground straps.

16-3. LCD operation

- 1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
- 2) Adjust the "Supply voltage for LCD driving ( $V_{CONT}$ )" to obtain optimum viewing angle and contrast ratio.
- 16-4. Storage
  - 1) The LCD shall be stored within the temperature and humidity limits specified.
  - Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
  - 2) Always store the LCD so that it is free from external pressure onto it.

16-5. Usage

- 1) <u>DO NOT</u> store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
- 2) The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
- 3) The LCD screen may be cleaned by wiping the screen surface with a soft cloth or cotton pad using a little Ethanol.
- 4) Water may cause damage or discoloration of the polarizer. Clean condensation or moisture from any source immediately.
- 5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
- 6) Do not pull the CFL lead wires and do not bend the root of the wires. Housing should be designed to protect CFL lead wires from external stress.
- 7) Do not disassemble LCD module because it will result in damage.
- 8) This Kyocera LCD module has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
- 9) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
- 10) Liquid crystal may leak when the module is broken. Be careful not to let the fluid go into your eyes

| Spec No.              | Part No.         | Page |

\* Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

\* The LCD is tested in circumstances in which there is no condensation.

\* The reliability test is not an out-going inspection.

\* The result of the reliability test is for your reference purpose only. The reliability test is conducted only to examine the LCD's capability.
