

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

KSZ8893FQL

Single-Chip 3-Port Switch
with Fiber Support

Rev. 1.3

General Description

The KSZ8893FQL, a highly integrated single-chip 3 port Fast Ethernet switch is designed for applications with fiber support such as media converter. It provides two 10/100 transceivers with patented mixed-signal low-power technology, three media access control (MAC) units, a high-speed non-blocking switch fabric, a Layer-2 managed switch and TS-1000 OAM (Operations, Administration and Management) V2 in a compact solution. Backwards compatible to the TS-1000 (2002) specification, TS-1000 V2 is an OAM sub-layer that provides communication between CO (central office) and CPE (customer premises equipment).

In fiber mode, one PHY unit can be configurable to 100Base-FX, 100Base-SX, or 10Base-FL fiber for conversion to 10Base-T and 100Base-TX copper. A fiber LED driver and post amplifier are also included for 10Base-FL and 100Base-SX applications.

LinkMD®

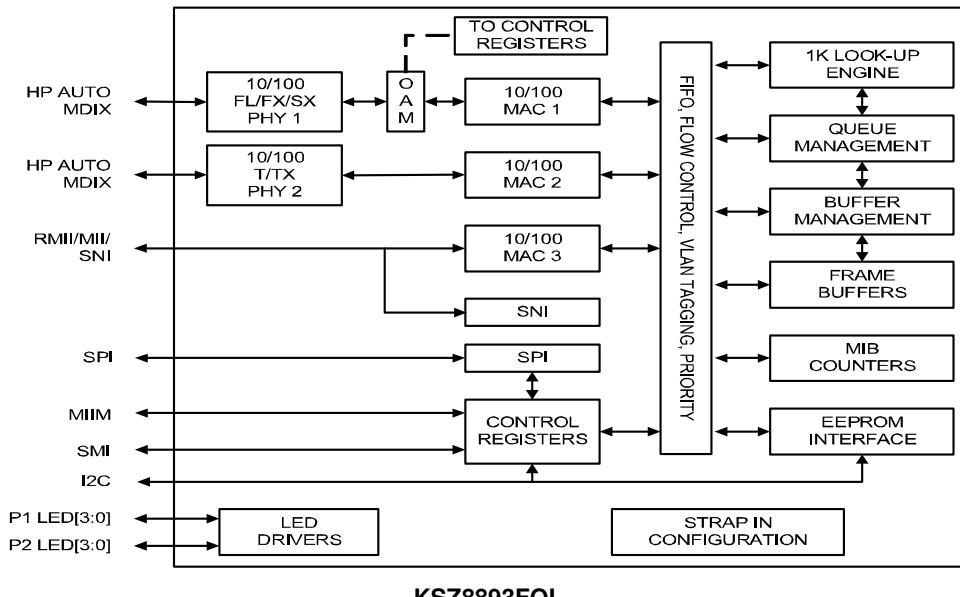

In copper mode, both PHY units support 10Base-T and 100Base-TX with HP Auto MDI/MDI-X for reliable detection of and correction for straight-through and crossover cables, and LinkMD® TDR-based cable diagnostics for identification of faulty cabling.

The high performance switching engine features an extensive feature set that includes programmable rate limiting, tag/port-based VLAN, 4 priority class, RMII/MII/SNI and CPU control/data interfaces to effectively address both current and emerging Fast Ethernet applications.

The KSZ8893FQL comes in a lead-free package (see Ordering Information).

Data sheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Features

Integrated 3-Port 10/100 Ethernet Switch

- Three MACs and two PHYs fully compliant with IEEE 802.3u standard
- Non-blocking switch fabric assures fast packet delivery by utilizing an 1K MAC address lookup table and a store-and-forward architecture
- Full duplex IEEE 802.3x flow control (PAUSE) with force mode option
- Half-duplex back pressure flow control
- HP Auto MDI-X for reliable detection of and correction for straight-through and crossover cables with disable and enable option
- Micrel LinkMD® TDR-based cable diagnostics permit identification of faulty copper cabling
- 100Base-FX, 100Base-SX and 10Base-FL fiber support on port 1
- MII interface supports both MAC mode and PHY mode
- RMII interface support with external 50MHz system clock
- 7-wire serial network interface (SNI) support for legacy MAC
- Comprehensive LED Indicator support for link, activity, full/half duplex and 10/100 speed

Fiber Support

- Integrated LED driver and post amplifier for 10Base-FL and 100Base-SX optical modules

TTC TS-1000 OAM

- Supports OAM sub-layer which conforms to TS-1000 V2 specification from TTC (Telecommunication Technology Committee)
- Sends and receives OAM frames to Center or Terminal side
- Loop back mode to support loop back packet from Center side to Terminal side
- Far-end fault detection with disable and enable
- Link Transparency to indicate link down from link partner
- Unique User Defined Register (UDR) feature brings OAM to low cost/complexity nodes

Comprehensive Configuration Register Access

- SMI, SPI and I²C management interfaces to all 8-bit internal registers
- MII management (MIIM) interface to PHY registers
- I/O pins strapping and EEPROM to program selective registers in unmanaged switch mode

- Control registers configurable on the fly (port-priority, 802.1p/d/q, AN...)

QoS/CoS Packet Prioritization Support

- Per port, 802.1p and DiffServ-based
- Re-mapping of 802.1p priority field per port basis
- Four priority levels

Advanced Switch Features

- IEEE 802.1q VLAN support for up to 16 groups (full-range of VLAN IDs)
- VLAN ID tag/untag options, per port basis
- IEEE 802.1p/q tag insertion or removal on a per port basis (egress)
- Programmable rate limiting at the ingress and egress on a per port basis
- Broadcast storm protection with % control (global and per port basis)
- IEEE 802.1d spanning tree protocol support
- Special tagging mode to inform the processor which ingress port receives the packet
- IGMP snooping (Ipv4) and MLD snooping (Ipv6) support for multicast packet filtering
- MAC filtering function to forward unknown unicast packets to specified port
- Double-tagging support

Low Latency Support

- Repeater mode

Switch Monitoring Features

- Port mirroring/monitoring/sniffing: ingress and/or egress traffic to any port or MII
- MIB counters for fully compliant statistics gathering, 34 MIB counters per port
- Loopback modes for remote diagnostic of failure

Low Power Dissipation

- Full-chip hardware power-down (register configuration not saved)
- Per port based software power-save on PHY (idle link detection, register configuration preserved)
- Voltages:
 - Core 1.2V
 - I/O and Transceiver 3.3V

Available in 128-Pin PQFP, Lead-free package

Applications

- Media Conversion Modules:
 - 10Base-FL <=> 10Base-T
 - 100Base-SX <=> 100Base-TX
 - 100Base-FX <=> 100Base-TX
- FTTx Managed/Unmanaged Media Converters
- Fiber Broadband Gateways

Ordering Information

| Part Number | Temp. Range | Package | Lead Finish | Description |
|---------------|-------------|--------------|-------------|---|
| KSZ8893FQL | 0°C to 70°C | 128-Pin PQFP | Pb-Free | Port 1 supports 10Base-FL and 100Base-SX with LED driver and post amp |
| KSZ8893FQL-FX | 0°C to 70°C | 128-Pin PQFP | Pb-Free | Port 1 supports 100Base-FX with TS-1000 OAM V2 |

Revision History

| Revision | Date | Summary of Changes |
|----------|----------|---|
| 1.0 | 07/05/06 | Data sheet created. |
| 1.1 | 02/08/07 | Modify Table 10. RMII Signal Connections Add TLA-6T718 to Table 37. Qualified Single Port Magnetics Remove KSZ8893FQLI from the datasheet |
| 1.2 | 06/19/07 | Update Ordering Information Add Thermal Resistance (θ_{JC}) to Operating Rating |
| 1.3 | 10/16/07 | Recommend connecting a 100ohm resistor between VDDC and 3.3V power rail. |

| (MCHS, MCCS) | Description | | | | | | | | | | | | |
| (0, 0) | Normal 3 port switch mode (3 MAC + 2 PHY) MC mode is disabled. Port 1 is either Fiber or UTP. Port 2 is UTP. Port 3 (MII) is enabled. | | | | | | | | | | | | |
| (0, 1) | Center MC mode (3 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber and has Center MC enabled. Port 2 is UTP. Port 3 (MII) is enabled. | | | | | | | | | | | | |
| (1, 0) | Terminal MC mode (2 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber and has Terminal MC enabled. Port 2 is UTP. Port 3 (MII) is disabled. | | | | | | | | | | | | |
| (1, 1) | Terminal MC mode (3 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber and has Terminal MC enabled. Port 2 is UTP. Port 3 (MII) is enabled. | | | | | | | | | | | | |
| 11 | PDD# | Ipu | <p>Power Down Detect</p> <p>1 = Normal operation. 0 = Power down detected.</p> <p>In Terminal MC mode (pin MCHS is '1'), a high to low transition to this pin will cause port 1 (fiber) to generate and send out an "Indicate Terminal MC Condition" OAM frame with the S0 status bit set to '1'.</p> | | | | | | | | | | |
| 12 | ADVFC | Ipu | <p>1 = Advertise the switch's flow control capability via auto-negotiation. 0 = Will not advertise the switch's flow control capability via auto-negotiation.</p> | | | | | | | | | | |
| 13 | P2ANEN | Ipu | <p>1 = Enable auto-negotiation on port 2. 0 = Disable auto-negotiation on port 2.</p> | | | | | | | | | | |
| 14 | P2SPD | Ipd | <p>1 = Force port 2 to 100BT if P2ANEN = 0. 0 = Force port 2 to 10BT if P2ANEN = 0.</p> | | | | | | | | | | |
| 15 | P2DPX | Ipd | <p>1 = Port 2 default to full duplex mode if P2ANEN = 1 and auto-negotiation fails. Force port 2 in full duplex mode if P2ANEN = 0. 0 = Port 2 default to half duplex mode if P2ANEN = 1 and auto-negotiation fails. Force port 2 in half duplex mode if P2ANEN = 0.</p> | | | | | | | | | | |
| 16 | P2FFC | Ipd | <p>1 = Always enable (force) port 2 flow control feature. 0 = Port 2 flow control feature enable is determined by the auto-negotiation result.</p> | | | | | | | | | | |

| Pin Number | Pin Name | Type ⁽¹⁾ | Pin Function |
|------------|-----------------|---------------------|--|
| 17 | P1FST | Opu | 1 = Normal function. 0 = MC in loopback mode, or MC abnormal conditions occur. |
| 18 | P1LCRCD | lpd | In MC loopback mode, 1 = Drop OAM frames and Ethernet frames with the following errors – CRS, undersize, oversize. Loopback Ethernet frames with only good CRC and valid length. 0 = Drop OAM frames only. Loopback all Ethernet frames including those with errors. |
| 19 | P1LPBM | lpd | 1 = Perform MC loopback at PHY of port 1. 0 = Perform MC loopback at MAC of port 2 |
| 20 | P2LED3 | Opd | Port 2 LED indicator Note: An external 1K pull-down is needed on this pin if it is connected to an LED. The 1K resistor will not turn ON the LED. See description in pin 4. |
| 21 | DGND | Gnd | Digital ground |
| 22 | VDDC / VOUT_1V2 | P | 1.2V digital V_{DD} Provides V_{OUT_1V2} to KSZ8893FQL's input power pins: V_{DDAP} (pin 63), V_{DDC} (pins 91 and 123), and V_{DDA} (pins 38, 43, and 57). It is recommended the pin should be connected to 3.3V power rail by a 100ohm resistor for the internal LDO application. |
| 23 | LEDSEL1 | lpd | LED display mode select. See description in pins 1 and 4. |
| 24 | NC | O | No connect |
| 25 | P1LED3 | Opd | Port 1 LED indicator Note: An external 1K pull-down is needed on this pin if it is connected to an LED. The 1K resistor will not turn ON the LED. See description in pin 1. |
| 26 | RMII_EN | Opd | Strap pin for RMII Mode 1 = Enable 0 = Disable After reset, this pin has no meaning and is a no connect. |
| 27 | HWPOVR | lpd | Hardware pin overwrite 1 = Enable: All strap-in pin configurations are overwritten by the EEPROM configuration data, except for P2ANEN (pin 13), P2SPD (pin 14), P2DPX (pin 15) and ML_EN (pin 34). After reset, the pin state for P2ANEN, P2SPD and P2DPX is polled by the KSZ8893FQL. 0 = Disable: All strap-in pin configurations are overwritten by the EEPROM configuration data. |
| 28 | P2MDIXDIS | lpd | Port 2 Auto MDI/MDI-X PD (default) = enable PU = disable |
| 29 | P2MDIX | lpd | Port 2 MDI/MDI-X setting when auto MDI/MDI-X is disabled. PD (default) = MDI-X (transmit on TXP2 / TXM2 pins) PU = MDI, (transmit on RXP2 / RXM2 pins) |
| 30 | P1ANEN | Ipu | 1 = Enable auto-negotiation on port 1 0 = Disable auto-negotiation on port 1 |
| 31 | P1SPD | lpd | 1 = Force port 1 to 100BT if P1ANEN = 0 0 = Force port 1 to 10BT if P1ANEN = 0 |

| Pin Number | Pin Name | Type ⁽¹⁾ | Pin Function |
|------------|----------|---------------------|--|
| 32 | P1DPX | Ipd | 1 = Port 1 default to full duplex mode if P1ANEN = 1 and auto-negotiation fails. Force port 1 in full-duplex mode if P1ANEN = 0. 0 = Port 1 default to half duplex mode if P1ANEN = 1 and auto-negotiation fails. Force port 1 in half duplex mode if P1ANEN = 0. |
| 33 | P1FFC | Ipd | 1 = Always enable (force) port 1 flow control feature 0 = Port 1 flow control feature enable is determined by auto-negotiation result. |
| 34 | ML_EN | Ipd | 1 = Enable missing link 0 = Disable missing link |
| 35 | DIAGF | Ipd | 1 = Diagnostic fail 0 = Diagnostic normal |

| 128 | SCANEN | lpu | Scan Test Scan Mux Enable For normal operation, pull-down this pin to ground. |

Notes:

1. P = Power supply.

Gnd = Ground.

I = Input.

O = Output.

I/O = Bi-directional.

lpd = Input with internal pull-down.

lpu = Input with internal pull-up.

opd = Output with internal pull-down.

opu = Output with internal pull-up.

lpd/O = Input with internal pull-down during reset; output pin otherwise.

lpu/O = Input with internal pull-up during reset; output pin otherwise.

Functional Description

The KSZ8893FQL is a single-chip Fast Ethernet media converter. It contains two 10/100 physical layer transceivers and three Media Access Control (MAC) units with an integrated Layer 2 managed switch.

On the media side, the KSZ8893FQL supports IEEE 802.3 10Base-T and 100Base-TX on both PHY ports. In Media Converter (MC) applications, PHY port 1 is the fiber port and supports 100Base-FX, 100Base-SX and 10Base-FL.

The KSZ8893FQL has the flexibility to reside in either a managed or unmanaged design. In a managed design, the host processor has complete control of the KSZ8893FQL via the SMI interface, MIIM interface, SPI bus, or I²C bus. An unmanaged design is achieved through I/O strapping and/or EEPROM programming at system reset time.

Physical signal transmission and reception are enhanced through the use of patented analog circuitries that make the design more efficient and allow for lower power consumption and smaller chip die size.

Functional Overview: Media Conversion

TS-1000 OAM Operation

The KSZ8893FQL implements Japan's TTC (TELECOMMUNICATION TECHNOLOGY COMMITTEE) TS-1000 version 2, OAM sub-layer, which resides between RS and PCS layer in the IEEE 802.3 Standard. The OAM sub-layer is provided in 100Base-FX mode, and is used by the KSZ8893FQL to send and receive OAM frames. These special frames are used for the transmission of OAM (Operations, Administration, Management) information between center MC and terminal MC. Key TS-1000 OAM features include:

- Private point-to-point communication between two TS-1000 compliant devices
- 96 bits (12 bytes) frames for the transmission of OAM information between center MC and terminal MC
- Transmission of MC status between center MC and terminal MC
- Automatic generation of OAM frame to inform MC link partner of local MC's status change
- Transmission of vendor code and model number information between center MC and terminal MC for device identification
- Inquisition of terminal MC status by center MC
- Remote loop back for diagnostic by center MC

OAM Frame Format

The TS-1000 OAM (Operations, Administration, and Management) Frame Format is shown on the following page.

| Bit | Command | Description |
|---------|-------------------------|--|
| F0–F7 | Preamble | 1010 1010 |
| C0 | Conservation Delimiter | 0 |
| C1 | Direction Delimiter | 0: Upstream (from terminal MC to center MC) 1: Downstream (from center MC to terminal MC) |
| C2–C3 | Configuration Delimiter | 10: request 11:reponse 01: indication 00:reserved |
| C4–C7 | Version | 0000 |
| C8–C15 | Control signal | 1000 0000: Start loop back test 0000 0000: Stop loop back test 0100 0000: Notify status |
| S0 | Status | Power 0: normal operation 1: power down |
| S1 | | Optical 0: normal 1: abnormal |
| S2 | | UTP link 0: link up 1: link down |
| S3 | | MC 0: normal 1:brake |
| S4 | | Way for information 0: use conservation frame 1: use FEFI |
| S5 | | Loop mode 0: normal operation 1: in loop mode |
| S6 | | Terminal MC Link option 0: Center side MC have to set always "0" 1: Terminal side MC have to set always "1" |
| S7 | | Terminal MC Link Speed1 This bit must be set "0" |
| S8 | | Terminal MC Link Speed2 0: 10Mbps 1: 100Mbps These bits have to be set "0", if S2 is "1" (Center side MC have to set always "0") |
| S9 | | Terminal MC Link Duplex 0: Half Duplex 1: Full Duplex This bit have to be set "0", if S2 is "1" (Center side MC have to set always "0") |
| S10 | | Terminal MC Auto-Negotiation capability 0: Not Support Auto-Negotiation 1: Support Auto-Negotiation (Center side MC have to set always "0") |
| S11 | | Multiple link partner 0: one link partner on UTP side 1: multiple link partner on UTP side |
| S12–S15 | | Reserve All bits must be set "0" |
| M0–M23 | Vendor code | |
| M24–M47 | Model number | |
| E0–E7 | FCS | Create FCS at this sub-layer (C0–M47) |

Figure 1. TS-1000 OAM Frame Format

Media Converter Modes

TS-1000 Media Converter (MC) modes are selected and configured using hardware pins: MCHS and MCCS. The MC modes are summarized in the following table and are also shown in the Pin Description and I/O Assignment section.

| (MCHS, MCCS) | Description |
|--------------|--|
| (0, 0) | Normal 3 port switch mode (3 MAC + 2 PHY) MC mode is disabled. Port 1 is either Fiber or UTP. Port 2 is UTP. Port 3 (MII) is enabled. |
| (0, 1) | Center MC mode (3 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber & has Center MC enabled. Port 2 is UTP. Port 3 (MII) is enabled. |
| (1, 0) | Terminal MC mode (2 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber & has Terminal MC enabled. Port 2 is UTP. Port 3 (MII) is disabled. |
| (1, 1) | Terminal MC mode (3 MAC + 2 PHY) MC mode is enabled. Port 1 is Fiber & has Terminal MC enabled. Port 2 is UTP. Port 3 (MII) is enabled. |

Table 1. TS-1000 Media Converter Mode Selection

The following figure shows two KSZ8893FQLs connected in a typical center MC to terminal MC application.

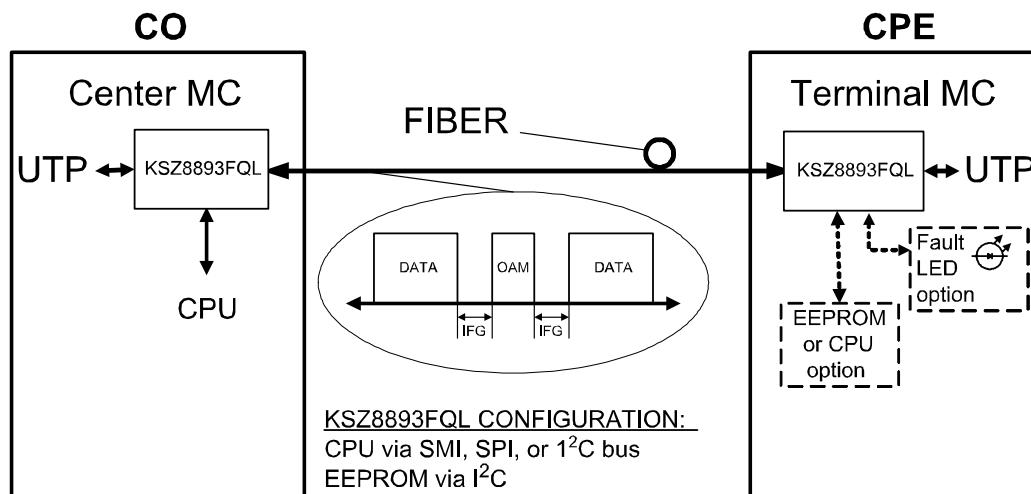

Figure 2. Typical TS-1000 Media Converter Application

MC Loop Back Operation

TS-1000 MC loop back operation is initiated and enabled by the center MC. The terminal MC provides the loop back path to return the loop back packet back to the center MC. The KSZ8893FQL in terminal MC mode provides three loop back path options:

Port 1 OPT

- Receive loop back packet from center MC at RXP1/RXM1 input pins of port 1 (fiber).
- Turn around loop back packet at PMD/PMA of port 1 (fiber).
- Transmit loop back packet back to center MC from TXP1/TXM1 output pins of port 1 (fiber).

Port 2 MAC

- Receive loop back packet from center MC at RXP1/RXM1 input pins of port 1 (fiber).
- Turn around loop back packet at MAC of port 2 (copper).
- Transmit loop back packet back to center MC from TXP1/TXM1 output pins of port 1 (fiber).

Port 2 UTP

- Receive loop back packet from center MC at RXP1/RXM1 input pins of port 1 (fiber).
- Turn around loop back packet at PMD/PMA of port 2 (copper).
- Transmit loop back packet back to center MC from TXP1/TXM1 output pins of port 1 (fiber).

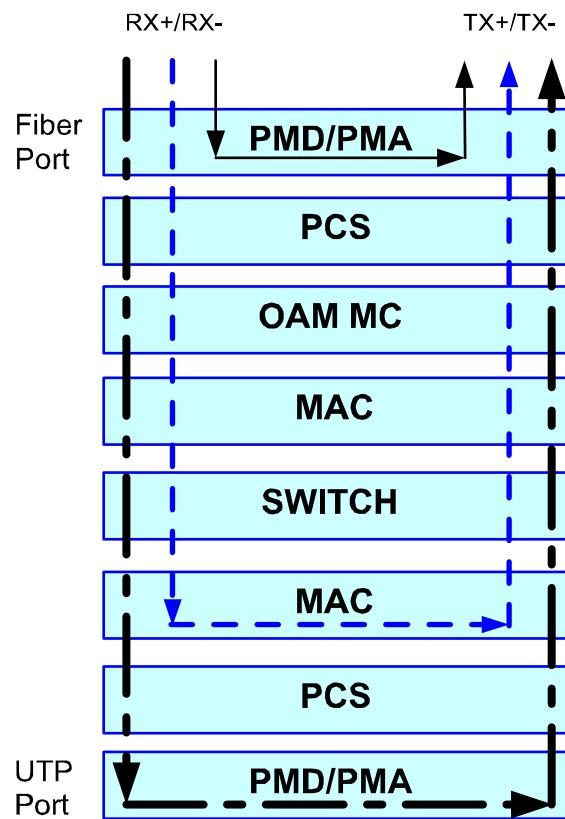

Figure 3. KSZ8893FQL MC Loop Back Paths
