

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## 5V-0.5A VERY LOW DROP REGULATOR WITH RESET

- PRECISE OUTPUT VOLTAGE ( $5V \pm 4\%$ ) OVER FULL TEMPERATURE RANGE ( $-40 / 125^\circ\text{C}$ )
- VERY LOW VOLTAGE DROP ( $0.75V_{\text{max}}$ ) OVER FULL T RANGE
- OUTPUT CURRENT UP TO 500mA
- RESET FUNCTION
- POWER-ON RESET DELAY PULSE DEFINED BY THE EXTERNAL CAPACITOR
- + 80V LOAD DUMP PROTECTION
- - 80V LOAD DUMP PROTECTION
- REVERSE VOLTAGE PROTECTION
- SHORT CIRCUIT PROTECTION AND THERMAL SHUT-DOWN (with hysteresis)
- LOW START UP CURRENT

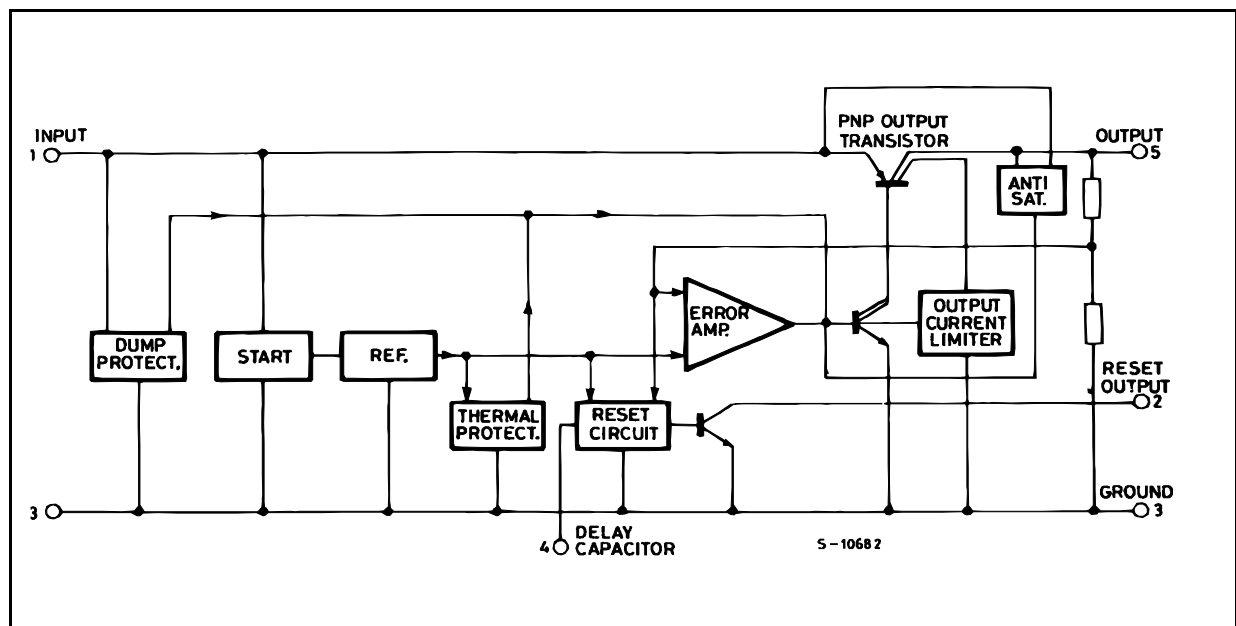

### DESCRIPTION

The L4947/L4947R is a monolithic integrated circuit in Pentawatt package specially designed to provide a stabilized supply voltage for automotive and industrial electronic systems. Thanks to its very low voltage drop, in automotive applications the L4947/L4947R can work correctly even during the cranking phase, when the battery voltage

could fall as low as 6V. Furthermore, it incorporates a complete range of protection circuits against the dangerous overvoltages always present on the battery rail of the car. The reset function makes the device particularly suited to supply microprocessor based systems : a signal is available (after an externally programmable delay) to reset the microprocessor at power-on phase ; at power-off, this signal becomes low inhibiting the microprocessor.

### BLOCK DIAGRAM

# L4947 - L4947R

## ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
$V_i$	DC Input Voltage	35	V
	DC Reverse Input Voltage	-18	V
	Transient Input Overvoltages : Load Dump :	80	V
	$5ms \leq t_{rise} \leq 10ms$ $\tau_f$ Fall Time Constant = 100ms $R_{SOURCE} \geq 0.5\Omega$	-80	V
	Field Decay : $5ms \leq t_{fall} \leq 10ms$ , $R_{SOURCE} \geq 10\Omega$ $\tau_r$ Rise Time Constant = 33ms	$\pm 100$	V
$V_R$	Reset Output Voltage	35	V
	$T_J, T_{stg}$ Junction and Storage Temperature Range	-55 to 150	$^{\circ}C$

Note: The circuit is ESD protected according to MIL-STD-883C.

(\*) For a DC voltage  $26 < V_i < 37\text{V}$  the device is not operating

## FUNCTIONAL DESCRIPTION

The L4947/L4947R is a very low drop 5V/0.5A voltage regulator provided with a reset function and therefore particularly suited to meet the requirements of supplying the microprocessor systems used in automotive and industrial applications.

The block diagram shows the basic structure of the device : the reference, the error amplifier, the

driver, the power PNP, the protection and reset functions.

The power stage is a Lateral PNP transistor which allows a very low dropout voltage (typ. 400mV at  $T_J = 25^\circ\text{C}$ , max. 750mV over the full temperature range @  $I_o = 500\text{mA}$ ). The typical curve of the dropout voltage as a function of the junction temperature is shown in Fig. 1 : that is the worst case, where  $I_o = 500\text{mA}$ .
