

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## High performance 2A ULDO linear regulator

### Features

- 2V to 14V input voltage range
- 200mΩ  $r_{DS(on)}$  max
- 200μA quiescent current at any load
- Excellent load and line regulation
- Adjustable from 1.2V to 5V
- 1% voltage regulation accuracy
- Short circuit protection
- Thermal shut down
- HSOP8 package

### Applications

- Motherboards
- Mobile PC
- Hand-held instruments
- PCMCIA Cards
- Processors I/O
- Chipset and RAM supply

### Description

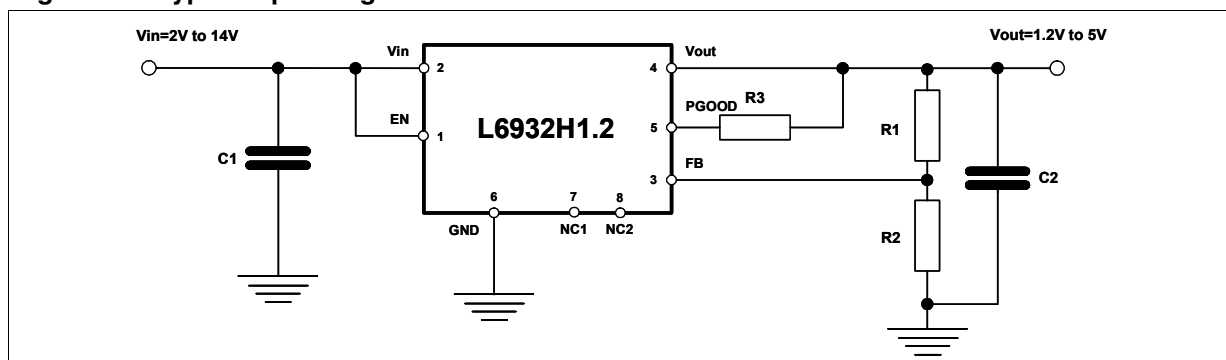

The L6932 Ultra Low Drop Output linear regulator operates from 2V to 14V and is able to support output current up to 2A. Designed with an internal 50mΩ N-channel Mosfet, it can be used for onboard DC-DC conversions saving in real estate, list of components, low noise generation and power dissipation.

L6932H1.2 is available as adjustable version from 1.2V to 5V with a voltage regulation accuracy of 1%.

The upper current limit is fixed at 2.5A to control the current in short circuit condition within  $\pm 8\%$ . The current is sensed in the power mos in order to limit the power dissipation.

The device is also provided with a thermal shut down that limits the internal temperature at 150°C with a hysteresis of 20°C. L6932H1.2 provides the Enable and the Power good functions.

# 1 Pin settings

## 1.1 Pin connection

Figure 2. Pin connection (top view)

## 1.2 Pin description

Table 2. Pin description

Name	Pin N°	Description
1	EN	Enables the device when connected to Vin and disables it when forced to GND.
2	VIN	Supply voltage. This pin is connected to the drain of the internal N-mos. Connect this pin to a capacitor larger than 10μF.
3	FB	Connecting this pin to a voltage divider it is possible to program the output voltage between 1.2V and 5V.
4	VOOUT	Regulated output voltage. This pin is connected to the source of the internal N-mos. Connect this pin to a capacitor of 10μF.
5	PGOOD	Power good output. The pin is open drain and detects the output voltage. It is forced low if the output voltage is lower than 90% of the programmed voltage.
6	GND	Ground pin
7, 8	NC1-NC2	Internally not connected.

## 2 Maximum ratings

### 2.1 Absolute maximum ratings

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
$V_{IN}$	VIN and PGOOD	14.5	V
	EN, OUT and ADJ	-0.3 to (Vin +0.3)	V

### 2.2 Thermal data

Table 4. Thermal data

Symbol	Parameter	Value	Unit
$R_{thJA}$	Maximum thermal resistance junction-ambient	34 <sup>(1)</sup>	°C/W
$T_{MAX}$	Maximum junction temperature	150	°C
$T_{STG}$	Storage temperature range	-65 to 150	°C

## 6 Application information

### 6.1 Application circuit

Figure 7. Demoboard application circuit

$$V_{OUT} = \frac{1.2}{R_2} \times (R_1 + R_2)$$

### 6.2 Demoboard layout

Figure 8. Demoboard layout

## 6.3 Component part list

**Table 6. Component par list**

Reference	Part number	Description	Manufacturer
C1	GRM32ER6C226KE20B	22Uf, 16V	MURATA
C2	GRM32ER6C226KE20B	22Uf, 16V	MURATA
R1		N.M.	
R2		0Ω	
R3		100K	

## 7 Components selection

### 7.1 Input capacitor

The input capacitor value depends on a lot of factors such as load transient requirements, input source (battery or DC/DC converter) and its distance from the input cap. Usually a 47μF is enough for any application but a much lower value can be sufficient in many cases.

### 7.2 Output capacitor

The output capacitor choice depends basically on the load transient requirements. Tantalum, Special Polymer, POSCAP and aluminum capacitors are good and offer very low ESR values. Multilayer ceramic caps have the lowest ESR and can be required for particular applications. Nevertheless in several applications they are ok, the loop stability issue has to be considered (see loop stability section).

Below a list of some suggested capacitor manufacturers

**Table 7. Suggested capacitor**

Manufacturer	Type	Cap Value (μF)	Rated Voltage (V)
MURATA	CERAMIC	1 to 47	4 to 16
PANASONIC	CERAMIC	1 to 47	4 to 16
TAYO YUDEN	CERAMIC	1 to 47	4 to 16
TDK	CERAMIC	1 to 47	4 to 16
TOKIN	CERAMIC	1 to 47	4 to 16
SANYO	POSCAP	1 to 47	4 to 16
PANASONIC	SP	1 to 47	4 to 16
KEMET	TANTALUM	1 to 47	4 to 16

### 7.3 Loop Stability

The stability of the loop is affected by the zero introduced by the output capacitor. The time constant of the zero is given by:

$$T = ESR \times C_{OUT}$$

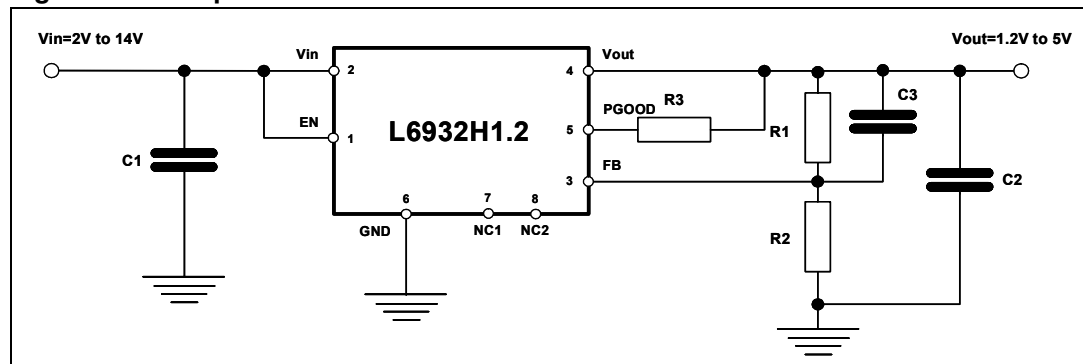

$$F_{ZERP} = \frac{1}{2\pi \times ESR \times C_{OUT}}$$

This zero helps to increase the phase margin of the loop until the time constant is higher than some hundreds of nsec, depending also on the output voltage and current.

So, using very low ESR ceramic capacitors could produce oscillations at the output, in particular when regulating high output voltages (adjustable version).

To solve this issue is sufficient to add a small capacitor (e.g. 1nF to 10nF) in parallel to the high side resistor of the external divider, as shown in [Figure 9](#).

**Figure 9. Compensation network**

The thermal resistance junction to ambient of the demoboard is approximately 34°C/W.

This means that, considering an ambient temperature of 60°C and, a maximum junction temperature of 150°C, the maximum power that the device can handle is 2.7W.

This means that the device is able to deliver a DC output current of 2A only with a very low dropout.

## 8 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect . The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com)
