Control Data Functions

1. PC1 to PC4: General-purpose output port state setting data

These control data bits set the states of the general-purpose output ports P1 to P4.

Output pin	P1	P2	P3	P4
General-purpose output port state setting data	PC1	PC2	PC3	PC4

For example, if PC1 and PC2 are set to 1, and PC3 and PC4 are set to 0, then the output pins P1 and P2 will output high levels (V_{DD}) and the output pins P3 and P4 will output low levels (V_{SS}).

2. CT0 to CT3, CTC: Display contrast setting data

These control data bits set the display contrast.

CT0 to CT3: Display contrast setting (11 steps)

CT0	CT1	CT2	CT3	LCD drive 4/4 bias voltage supply V_{LCD0} level
0	0	0	0	$0.94V_{LCD}=V_{LCD}-(0.03V_{LCD}\times 2)$

0	1	0	0	$0.88V_{LCD}=V_{LCD}-(0.03V_{LCD}\times 4)$

0	1	0	1	$0.64V_{LCD}=V_{LCD}-(0.03V_{LCD}\times 12)$

CTC: Display contrast adjustment circuit state setting

CTC	Display contrast adjustment circuit state
0	The display contrast adjustment circuit is disabled, and the V_{LCD0} pin level is forced to the V_{LCD} level.
1	The display contrast adjustment circuit operates and the display contrast is adjusted.

Note that although the display contrast can be adjusted by operating the built-in display contrast adjustment circuit, it is also possible to apply fine adjustments to the contrast by connecting an external variable resistor to the V_{LCD4} pin and modifying the V_{LCD4} pin voltage. However, the following conditions must be met: $(V_{LCD0} - V_{LCD4}) \geq 4.5$ V, and 1.5 V $\geq V_{LCD4} \geq 0$ V.

3. SC: Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

LC75878W

4. BU: Normal mode/power saving mode control data

This control data bit controls the normal mode and power saving mode.

BU	Mode
0	Normal mode
1	Power-saving mode. The common and segment pins go to the V_{LCD}^4 level and the oscillator on the OSC pin is stopped. Note that the states of the general-purpose output ports P1 to P4 are set by PC1 to PC4 in the control data during power saving mode as well as normal mode.

5. DT1, DT2: Display technique setting data

This control data bits set the display technique.

DT1	DT2	Display technique	Output pins	
			S75/COM9	S74/COM10
0	0	1/8 duty 1/4 bias drive	S75	S74
1	0	1/9 duty 1/4 bias drive	COM9	S74
