

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Programmable transient voltage suppressor for SLIC protection

Datasheet - production data

### Description

This device has been especially designed to protect new high voltage, as well as classical SLICs, against transient overvoltages.

Positive overvoltages are clamped by 2 diodes. Negative surges are suppressed by 2 thyristors, their breakdown voltage being referenced to  $-V_{BAT}$  through the gate.

LCP154DJF is specified to comply with ITU-T K20/21/45 and GR1089-Core when associated with Cooper Bussmann Telecom Circuit Protector fuse TCP 1.25 A.

LCP154DJF is packaged in a PowerFLAT™ 5x6 to meet IEC/UL 60950 clearance requirements.

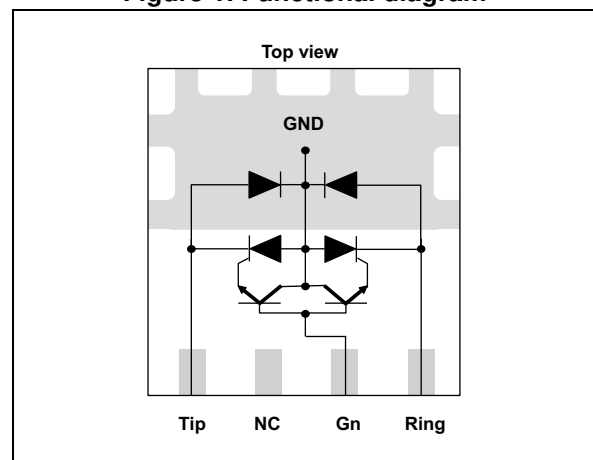

### Features

- Programmable transient suppressor
- Wide negative firing voltage range:  $V_{Gn} = -175\text{ V max.}$
- Low dynamic switching voltages:  $V_{FP}$  and  $V_{DGL}$
- Low gate triggering current:  $I_{GT} = 5\text{ mA max.}$
- Peak pulse current:
  - $I_{PP} = 100\text{ A (10/1000 }\mu\text{s)}$
  - $I_{PP} = 150\text{ A (5/310 }\mu\text{s)}$
  - $I_{PP} = 500\text{ A (2/10 }\mu\text{s)}$
- Holding current:  $I_H = 150\text{ mA min.}$

### Benefits

- Trisil™ is not subject to ageing and provides a fail safe mode in short circuit for a better level of protection.
- Trisils are used to ensure equipment meets various standards such as UL60950, IEC 60950 / CSA C22.2, UL1459, TIA-968-A (formerly FCC part 68)
- Trisils have UL94 V0 approved resin (Trisils are UL497B approved [file: E136224]).

1. The rated current values may be applied either to the RING to GND or to the Tip to GND terminal pairs. Additionally, both terminal pairs may have their rated current values applied simultaneously (in this case the GND terminal current will be twice the rated current value of an individual terminal pair).

## 2 Technical information

Figure 4. Example of PCB layout based on LCP154DJF protection

Figure 4 shows the classical PCB layout used to optimize line protection. The 2 mm distance is used to comply with IEC/UL 60950 clearance requirements.

The capacitor C is used to speed up the crowbar structure firing during the fast surge edges.

This allows minimization of the dynamic breakover voltage at the SLIC Tip and Ring inputs during fast strikes. Note that this capacitor is generally present around the SLIC - Vbat pin.

So to be efficient it has to be as close as possible from the LCP Gate pin and from the reference ground track (or plan).

The schematics of Figure 5 give the topology used to protect all SLICs according to ITU-T K20/21/45 and GR1089-Core.
