

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Ultra low drop BiCMOS voltage regulator

Datasheet - production data

- Temperature range: -40 to 125 °C
- Fast dynamic response to line and load changes
- Stable with ceramic capacitor
- Available in PPAK, DPAK and DFN8 (4x4 mm)

Applications

- Microprocessor power supply
- DSP power supply
- Post regulators for switching suppliers
- High efficiency linear regulator

Features

- 0.8 A guaranteed output current
- Ultra low-dropout voltage (150 mV typ. @ 0.8 A load, 20 mV typ. @150 mA load)
- Very low quiescent current (1 mA typ. @ 0.8 A load, 1 μ A max.@ 25 °C in off mode)
- Logic-controlled electronic shutdown
- Current and thermal internal limit
- \pm 1.5% output voltage tolerance @ 25 °C
- Fixed and ADJ output voltages: 1.22 V, 1.8 V, 2.5 V, 3.3 V, ADJ

Description

The LD39080 is a fast, ultra low drop linear regulator which operates from 2.5 V to 6 V input supply.

A wide range of output options is available. The low drop voltage, low noise, and ultra low quiescent current make it suitable for low voltage microprocessors and memory applications. The device is developed on the BiCMOS process which allows the low quiescent current operation regardless of the output load current.

Table 1. Device summary

Part numbers			Output voltage
DPAK (tape and reel)	PPAK (tape and reel)	DFN8 (4x4 mm) ⁽¹⁾	
LD39080DT12-R		LD39080PU12R	1.22 V
LD39080DT18-R	LD39080PT18-R	LD39080PU18R	1.8 V
LD39080DT25-R	LD39080PT25-R	LD39080PU25R	2.5 V
LD39080DT33-R	LD39080PT33-R	LD39080PU33R	3.3 V
	LD39080PT-R	LD39080PU-R	ADJ from 1.22 to 5.0 V

1 Diagram

Figure 1. Block diagram

(*) Not present on ADJ version.

2 Pin configuration

Figure 2. Pin connections (top view for DPAK and PPAK, bottom view for DFN8)

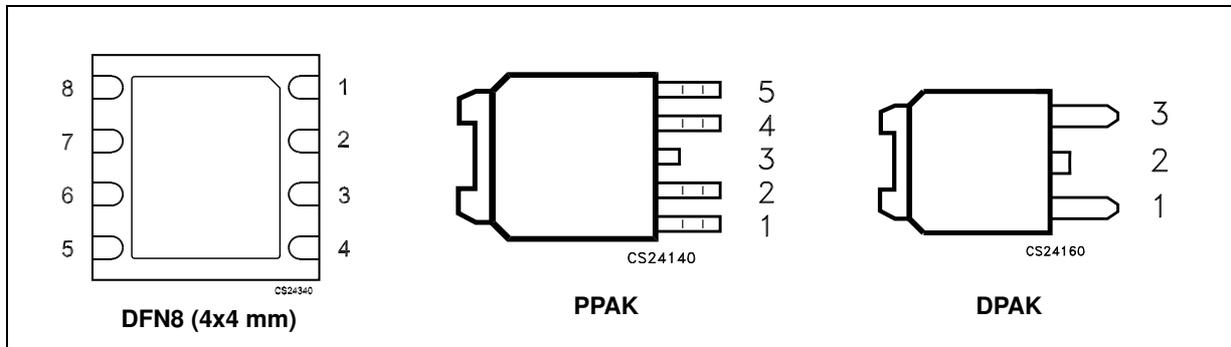

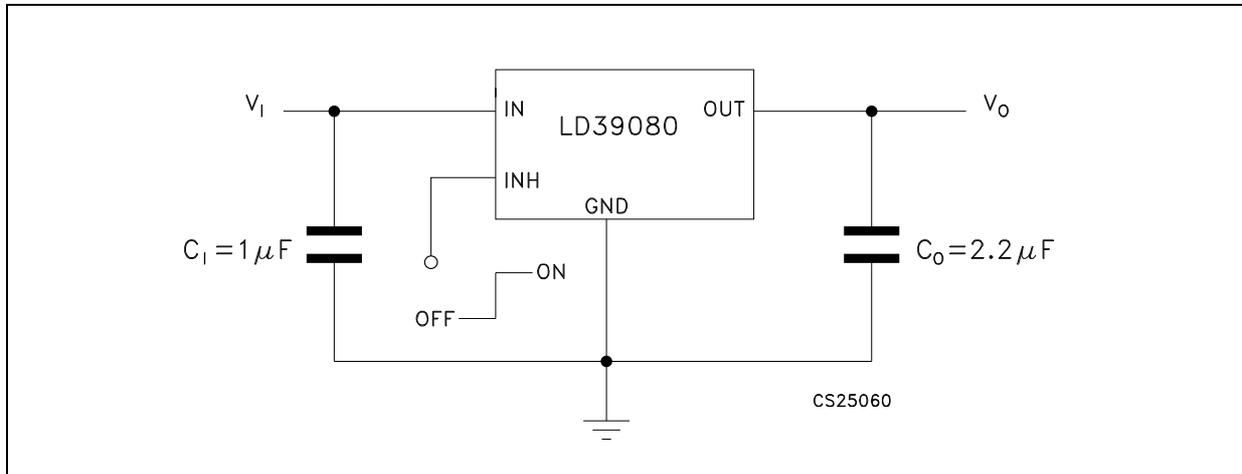

Table 2. Pin description

Pin			Symbol	Note
DFN8 (4x4 mm)	PPAK	DPAK		
8	5		$V_{SENSE}/N.C.$	Fixed version: to be connected to LDO output voltage pins for DFN package and not connected on PPAK
			ADJ	Adjustable version: error amplifier input pin for V_O from 1.22 to 5.0 V
3, 4	2	1	V_I	LDO input voltage: V_I from 2.5 V to 6 V, $C_I=1 \mu F$ not farther than 1 cm from input pin
6, 7	4	3	V_O	LDO output voltage pins, with minimum $C_O = 2.2 \mu F$ needed for stability (refer to C_O vs ESR stability chart)
2	1		V_{INH}	Inhibit input voltage: on mode when $V_{INH} \geq 2 V$, off mode when $V_{INH} \leq 0.3 V$ (do not leave it floating, not internally pulled down/up)
1	3	2	GND	Common ground
5			N.C.	Not connected

3 Typical application circuits

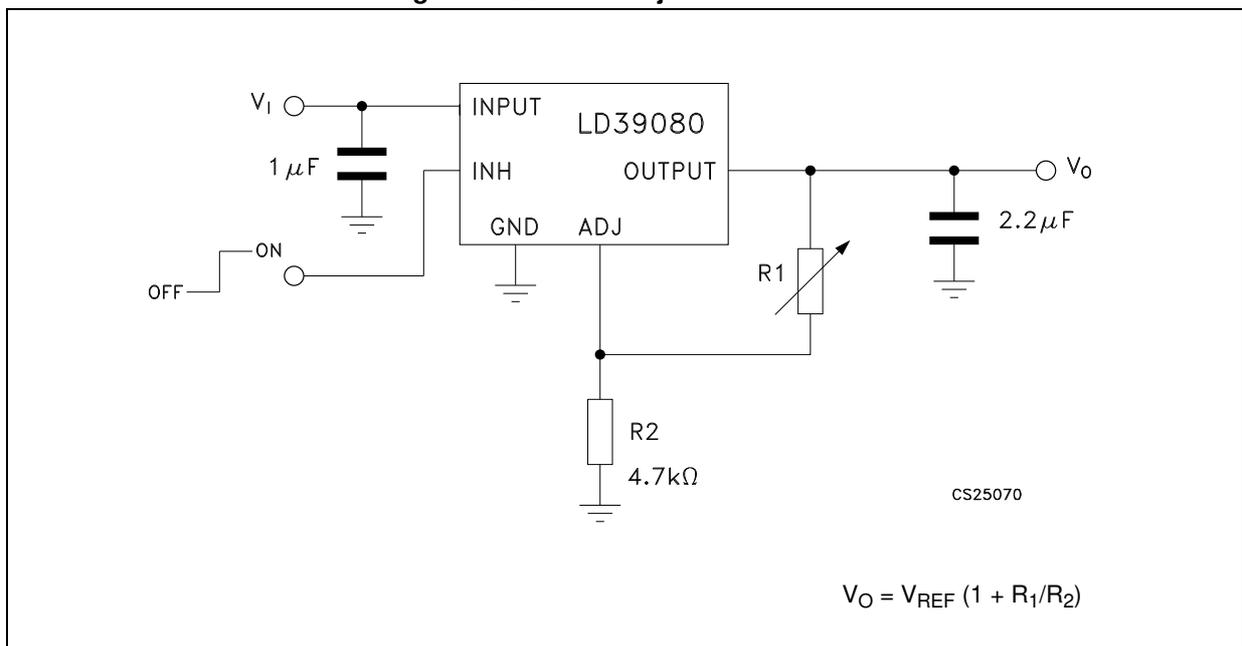

(C_I and C_O capacitors have to be placed as closer as possible to the IC pin)

Figure 3. LD39080 fixed version with inhibit

Note: The inhibit pin is not internally pulled down/up, therefore it must not be left floating. The device has to be disabled when it is connected to GND or to a positive voltage less than 0.3 V.

Figure 4. LD39080 adjustable version

Note: Set R_2 as closer as possible to 4.7 K Ω .

Figure 5. LD39080 DPAK

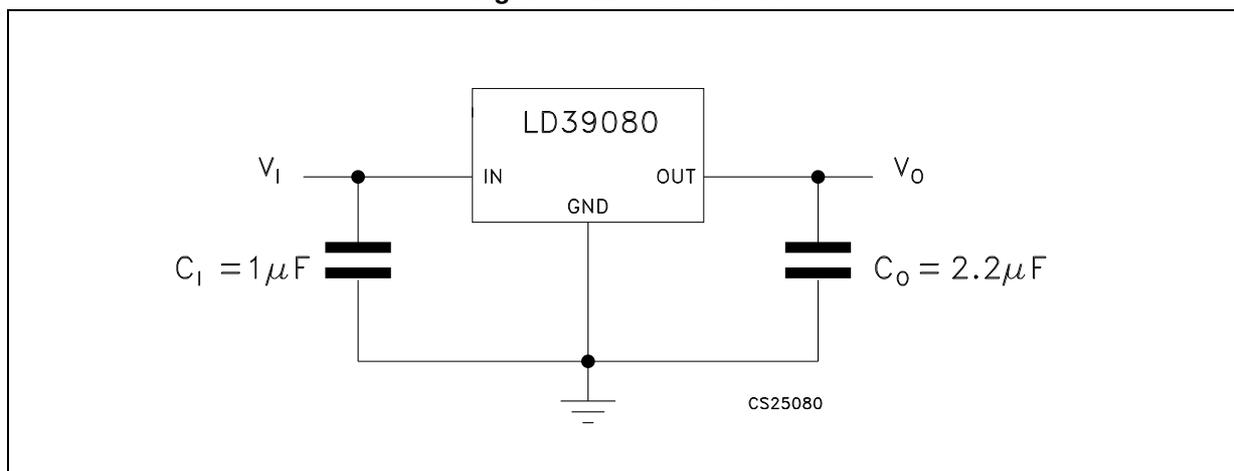

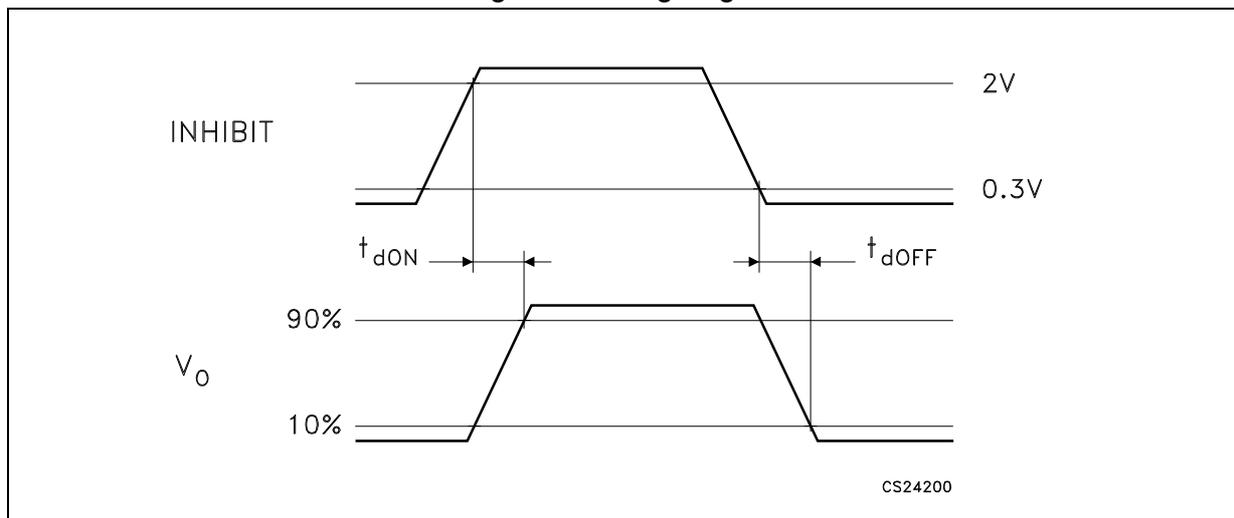

Figure 6. Timing diagram

4 Maximum ratings

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_I	DC input voltage	-0.3 to 6.5	V
V_{INH}	Inhibit input voltage	-0.3 to $V_I + 0.3$ (6.5 V max.)	V
V_O	DC output voltage	-0.3 to $V_I + 0.3$ (6.5 V max.)	V
V_{ADJ}	ADJ pin voltage	-0.3 to $V_I + 0.3$ (6.5 V max.)	V
I_O	Output current	Internally limited	mA
P_D	Power dissipation	Internally limited	mW
T_{STG}	Storage temperature range	-50 to 150	°C
T_{OP}	Operating junction temperature range	-40 to 125	°C

Note: Absolute maximum ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. All values are referred to GND.

Table 4. Thermal data

Symbol	Parameter	PPAK	DPAK	DFN8 (4x4 mm) ⁽¹⁾	Unit
R_{thJA}	Thermal resistance junction-ambient	100	100	40	°C/W
R_{thJC}	Thermal resistance junction-case	8	8	10	°C/W

1. With a PCB ground plane and heatsink.

5 Electrical characteristics

$T_J = 25\text{ °C}$, $V_I = V_O + 1\text{ V}$, $C_I = 1\text{ }\mu\text{F}$, $C_O = 2.2\text{ }\mu\text{F}$, $I_{LOAD} = 10\text{ mA}$, $V_{INH} = 2\text{ V}$, unless otherwise specified.

Table 5. Electrical characteristics

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
V_I	Operating input voltage		2.5		6	V
V_O	Output voltage tolerance	$V_I = V_O + 1\text{ V}$, $I_{LOAD} = 10\text{ mA to }0.8\text{ A}$	-1.5		1.5	% of $V_{O(NOM)}$
		$V_I = V_O + 1\text{ V to }6\text{ V}$, $I_{LOAD} = 10\text{ mA to }0.8\text{ A}$ $T_J = -40\text{ to }125\text{ °C}$	-3		3

7 Application notes

7.1 External capacitor

The LD39080 requires external capacitors to assure the stability. These capacitors have to meet the requirements of minimum capacitance and equivalent series resistance (see [Figure 17](#) [Figure 18](#)). The input/output capacitors cannot be farther than 1 cm from the relative pins and have to be connected directly to the input/output ground pins using traces without any current flowing through them. Ceramic or electrolytic capacitors can be used.

7.2 Input capacitor

An input capacitor, whose minimum value is 1 μF , is required (the amount of capacitance can be increased without any limit). This capacitor cannot be farther than 1 cm from the input pin of the device and has to return to clean analog ground. Ceramic, tantalum or film capacitors can be used.

7.3 Output capacitor

Ceramic or tantalum capacitors can be used but the output capacitor has to meet the requirements of minimum capacitance and ESR (equivalent series resistance) value. A minimum capacitance of 2.2 μF is a good choice to guarantee the stability of the regulator. Anyway, other C_O values can be used as per [Figure 17](#) [Figure 18](#), where the allowable ESR range is seen as a function of the output capacitance. The curve represents the stability region over the full temperature and I_O range.

7.4 Thermal note

The output capacitor has to maintain its ESR in the stable region over the operating temperature range to assure the stability. Besides, capacitor tolerance and temperature variation have to be taken into account to assure the minimum amount of capacitance all time.

7.5 Inhibit input operation

The inhibit pin can be used to turn off the regulator when pulled down, therefore by reducing the current consumption below 1 μA . When the inhibit feature is not used, this pin has to be tied to V_I to turn on the regulator output all the time. To assure the right operation, the signal source, used to drive the inhibit pin, has to swing above and below the specified thresholds listed in [Section 5: Electrical characteristics](#) (V_{IH} V_{IL}). The inhibit pin must not be left floating because it is not internally pulled down/up.
