Output Voltage Adjustment of the LDO10C Series

The ultra-wide output voltage trim range offers major advantages to users who select the LDO10C series. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.59 - 5.1 Vdc. When the LDO10C converter leaves the factory, the output has been adjusted to the default voltage of 0.59 V.

Notes:

- 1. Measured as per recommended system capacitance. See Application Note 186.
- 2. di/dt = 10 A/µs, Vin = Nom, Tc = 25 °C, load change = 0.50 lo to full lo and full lo to 0.50.
- 3. External input fusing is recommended.
- 4. Additional part numbers may be available with different output voltages.
- 5. Airflow dependent, 100 LFM minimum required.
- 6. No capacitors needed for ripple current stability.
- 7. No capacitors needed for stability.
- 8. NOTICE: the input voltage must be greater than the programmed output voltage. The max duty cycle is 95%. These non-isolated dc-dc modules are buck converters.
