## The Lattice Advantage

### Customizable Solutions

Lattice Semiconductor leads the industry in ultra-low power, small form factor, customizable solutions for today's quickly changing connected world. From heterogeneous networks and micro servers, to smartphones, tablets and wearables, Lattice FPGAs and CPLDs are at the heart of solutions that give designers the ability to quickly innovate, or build and add features to their systems that uniquely differentiate their products.

**iCE40 Portfolio: World's Smallest FPGAs** – Lattice's iCE40 family offers the world's smallest FPGAs at very low power enabling flexible and fast customization on standard platforms – perfect for implementing killer features on smartphones, tablets, wearables, IoT edge, and other mobile devices.

**MachXO Portfolio: Control PLD and Bridging** – The award-winning MachXO2 FPGA family and new MachXO3 family – the world's smallest, lowest-cost-per I/O, instant-on programmable platform – can be used to quickly implement system control functions, I/O expansion and bridging in applications such as routers, base stations, servers, storage, industrial, medical and consumer.

**ECP Portfolio: Connectivity and Acceleration FPGAs** – The LatticeECP3, ECP5 and ECP5-5G families are optimized for data and control path bridge and interfacing, architected with high-performance SERDES, full-featured DSP blocks, and for state-of-the-art memory interfaces for supporting a wide range of applications including wireless and wireline communication, video processing, security and surveillance, industrial automation, and automotive.

### Power and Thermal Management Products

Lattice's Platform Manager 2 devices implement circuit board hardware management functions (Power Management, Control Plane Functions and Thermal Management). The Platform Manager 2 device family is comprised of a Platform Manager 2 device (Programmable Analog + FPGA) and a Programmable Analog Sense and Control device (L-ASC10).

In simpler boards, the Power Management functions can be integrated into Lattice Power Manager II products.

### Standards-Based Products

Lattice enables high-performance digital connectivity for some of the world's biggest brands in mobile, consumer electronic (CE), and PC markets. As the driving force behind global standards including HDMI®, DVI, MHL®, and WirelessHD®, Lattice's understanding of these technologies is second to none.

As a Founder of both the HDMI® and MHL® Specifications, and through extensive experience with compliance and interoperability testing, Lattice is in a unique position to offer tested, field-proven solutions that can be rapidly and reliably integrated into TVs, projectors, A/V receivers, Blu-ray players, set-top boxes, and other digital display and home theater products.

Lattice's mobile semiconductor products are designed for smartphones, tablets, digital cameras, streaming sticks, mobile docks, and other devices where a small form factor and lower power consumption are essential. Lattice offers support for proprietary connectors along with standard micro-USB, USB Type-C, superMHL™, and HDMI connectors.

### pASSP™ Solutions

Lattice has combined the flexibility and fast time to market advantage of an FPGA with the power and efficiency of an ASSP to create a new product class called programmable ASSP (pASSP). This gives designers the best of both worlds by delivering the most flexible, highest bandwidth, lowest power and smallest footprint solutions for several high-growth market segments.

**CrossLink Portfolio: pASSP Video Interface Bridges** – CrossLink is the industry's first programmable bridging device that resolves interface mismatches between application processors, image sensors, and displays. This makes it the optimal solution for VR headsets, drones, smartphones, tablets, cameras, wearables, human machine interfaces (HMIs), and automotive.

### SiBEAM

SiBEAM, a Lattice Semiconductor Company, is a pioneer in developing intelligent millimeter-wave technologies for wireless communications. The company was the first to build 60GHz chipsets using standard CMOS technology. SiBEAM is a global leader in driving next-generation architecture and semiconductor implementation of wireless connectivity solutions in the consumer electronics, mobile, enterprise and infrastructure markets.

SiBEAM's WirelessHD transmitter and receiver modules are completely self-contained, autonomous WirelessHD subsystems that connect to a host board and enables. These WirelessHD modules enable a robust high-definition wireless video connectivity between an HDMI® source and a display, delivering a cable-quality connection without wires.
