The LightHAWK[®]2 Ultrasonic Wall Switch Sensor uses ultrasonic (US) technology for detecting minor movement in areas with line-of-sight obstacles such as cubicles and stalls. Ultrasonic technology is volumetric in nature, its coverage pattern can adapt itself to fill oddly shaped spaces such as alcoves, recesses, and nooks. This sensor has a coverage area of up to 400 square feet and 180° of detection.

LHUS sensors feature Hubbell Controls' patented IntelliDAPT[™] technology, which makes all the sensor adjustment decisions automatically. Throughout the product's lifespan, smart software analyzes the controlled area and makes digital adjustments to sensitivity and timer settings. Occupancy sensors with IntelliDAPT technology provide a maintenance-free, install-and-forget operation. With selectable operating modes—automatic On/Off or manual On/ automatic Off—and a built-in photosensor for automatic daylight harvesting, the LHUS sensors are the most capable choice in today's market place.
