

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LM321

Single Channel Operational Amplifier

LM321 is a general purpose, single channel op amp with internal compensation and a true differential input stage. This op amp features a wide supply voltage ranging from 3 V to 32 V for single supplies and ± 1.5 to ± 16 V for split supplies, suiting a variety of applications. LM321 is unity gain stable even with large capacitive loads up to 1.5 nF. LM321 is available in a space-saving TSOP-5/SOT23-5 package.

Features

- Wide Supply Voltage Range: 3 V to 32 V
- Short Circuit Protected Outputs
- True Differential Input Stage
- Low Input Bias Currents
- Internally Compensated
- Single and Split Supply Operation
- Unity Gain Stable with 1.5 nF Capacitive Load
- This Device is Pb-Free, Halogen Free/BFR Free and is RoHS Compliant

Typical Applications

- Gain Stage
- Active Filter
- Signal Processing

Table 1. ABSOLUTE MAXIMUM RATINGS (Over operating free-air temperature, unless otherwise stated)

Parameter	Rating	Unit
Supply Voltage	36	V
INPUT AND OUTPUT PINS		
Input Voltage	$V_{EE} - 0.3$ to 32	V
Input Current	± 10	mA
Output Short Circuit Duration (Note 1)	Continuous	
TEMPERATURE		
Operating Temperature	-40 to +125	°C
Storage Temperature	-65 to +150	°C
Junction Temperature	-65 to +150	°C
ESD RATINGS (Note 2)		
Human Body Model (HBM)	200	V
Charged Device Model (CDM)	800	V
Machine Model (MM)	100	V
OTHER RATINGS		
Latch-Up Current (Note 3)	100	mA
MSL	Level 1	

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- Short circuits can cause excessive heating and eventual destruction.
- This device series incorporates ESD protection and is tested by the following methods:
 ESD Human Body Model tested per JEDEC standard: JESD22-A114
 ESD Machine Model tested per JEDEC standard: JESD22-A115
- Latch-up Current tested per JEDEC standard: JESD78

Table 2. THERMAL INFORMATION (Note 4)

Parameter	Symbol	Package	Value	Unit
Junction to Ambient	θ_{JA}	TSOP-5/SOT23-5	235	°C/W

- As mounted on an $80 \times 80 \times 1.5$ mm FR4 PCB with 650 mm^2 and 2 oz (0.034 mm) thick copper heat spreader. Following JEDEC JESD/EIA 51.1, 51.2, 51.3 test guidelines.

Table 3. RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Range	Unit
Supply Voltage ($V_{CC} - V_{EE}$)	V_S	3 to 32	V
Specified Operating Range	T_A	-40 to 85	°C
Common Mode Input Voltage Range	V_{CM}	V_{EE} to $V_{CC} - 1.7$	V

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

LM321

Table 4. ELECTRICAL CHARACTERISTICS – $V_S = 5\text{ V}$

(At $T_A = +25^\circ\text{C}$, $R_L = 10\text{ k}\Omega$ connected to mid-supply, $V_{CM} = V_{OUT} = \text{mid-supply}$, unless otherwise noted.)

Boldface limits apply over the specified temperature range, $T_A = -40^\circ\text{C}$ to 85°C , guaranteed by characterization and/or design.)

LM321

APPLICATION INFORMATION

CIRCUIT DESCRIPTION

The LM321 is made using two internally compensated, two-stage operational amplifiers. The first stage of each consists of differential input devices Q20 and Q18 with input buffer transistors Q21 and Q17 and the differential to single ended converter Q3 and Q4. The first stage performs not only the first stage gain function but also performs the level shifting and transconductance reduction functions. By reducing the transconductance, a smaller compensation capacitor (only 5.0 pF) can be employed, thus saving chip area. The transconductance reduction is accomplished by

splitting the collectors of Q20 and Q18. Another feature of this input stage is that the input common mode range can include the negative supply or ground, in single supply operation, without saturating either the input devices or the differential to single-ended converter. The second stage consists of a standard current source load amplifier stage.

Each amplifier is biased from an internal-voltage regulator which has a low temperature coefficient thus giving each amplifier good temperature characteristics as well as excellent power supply rejection.

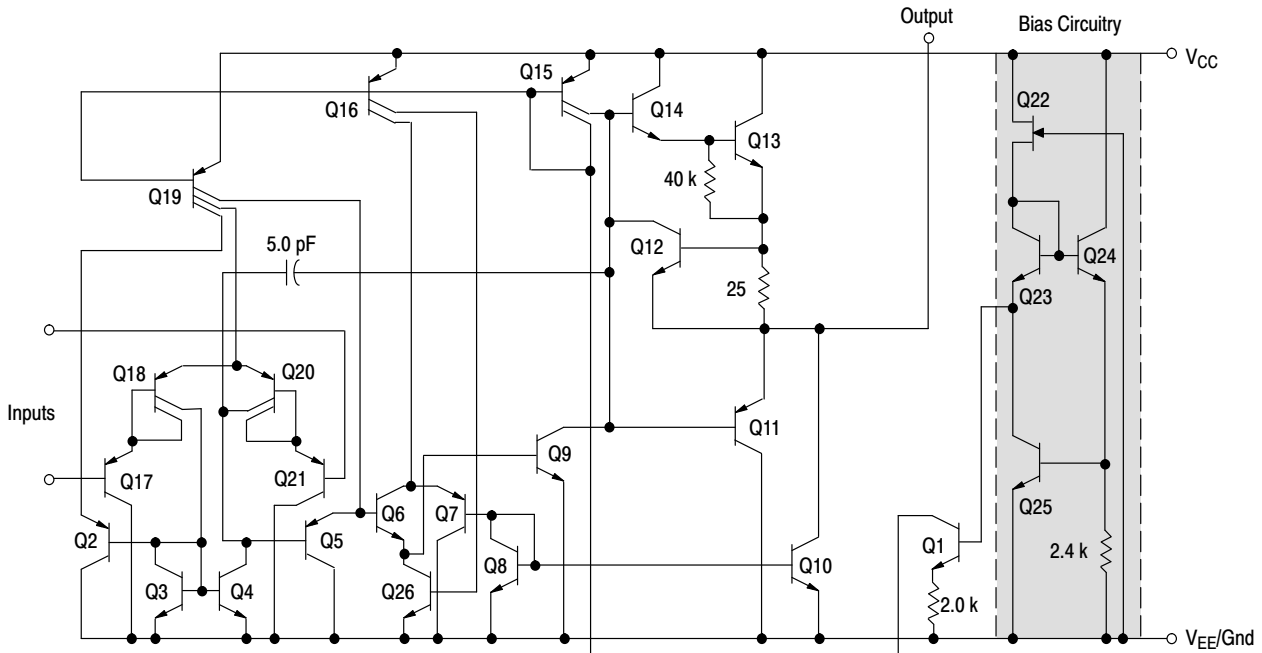

Figure 19. LM321 Representative Schematic Diagram

LM321

LM321 has a class B output stage, which is comprised of push-pull transistors. This type of output is inherently subject to crossover distortion near mid-rail where neither push or pull transistors are conducting. Several techniques can be used to minimize crossover distortion. Connecting the output load to either the positive or negative supply rail instead of mid-rail can reduce the crossover distortion. Additionally, increasing the load resistance relatively decreases the amount of crossover distortion.

PACKAGE DIMENSIONS

TSOP-5
CASE 483
ISSUE L

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
2. CONTROLLING DIMENSION: MILLIMETERS.
3. MAXIMUM LEAD THICKNESS INCLUDES LEAD FINISH THICKNESS. MINIMUM LEAD THICKNESS IS THE MINIMUM THICKNESS OF BASE MATERIAL.
4. DIMENSIONS A AND B DO NOT INCLUDE MOLD FLASH, PROTRUSIONS, OR GATE BURRS. MOLD FLASH, PROTRUSIONS, OR GATE BURRS SHALL NOT EXCEED 0.15 PER SIDE. DIMENSION A.
5. OPTIONAL CONSTRUCTION: AN ADDITIONAL TRIMMED LEAD IS ALLOWED IN THIS LOCATION. TRIMMED LEAD NOT TO EXTEND MORE THAN 0.2 FROM BODY.

MILLIMETERS		
DIM	MIN	MAX
A	3.00	BSC
B	1.50	BSC
C	0.90	1.10
D	0.25	0.50
G	0.95	BSC
H	0.01	0.10
J	0.10	0.26
K	0.20	0.60
M	0°	10°
S	2.50	3.00
