

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

#### NOTICE

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- · Personal computers
- Office automation
- · Telecommunication equipment
- · Test and measurement equipment
- · Industrial control
- · Audio visual and multimedia equipment
- · Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment(i.e., aircraft, trains, automobiles, etc.)
- · Traffic signals
- · Gas leakage sensor breakers
- · Alarm equipment
- · Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
- · Nuclear power control equipment
- · Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

### (1) Application

This specification applies to LQ036Q1DA01.

# (2) Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, an FPC, a back light, a front sealed casing and a back sealed casing. It isn't composed control circuit. Graphics and texts can be displayed on a  $320 \times 3 \times 240$  dots panel with 262,144 colors by supplying. Optimum view angle is 6 o'clock. An inverted display mode is selective in the vertical or the horizontal direction.

This module is Lead-free design.

#### (3) Mechanical specifications

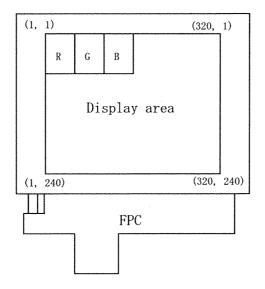

Table 1

Parameter	Specifications	Units	Remarks
Screen size (Diagonal)	9.1 [3.6"] Diagonal	cm	
Display active area	72.5~(H)~ imes 54.4~(V)	mm	
Pixel format	$320(H) \times 240(V)$ (1 pixel = R+G+B dots)	pixels	-
Pixel pitch	0.076 (H) ×0.227 (V)	mm	
Pixel configuration	R,G,B vertical stripe		
Display mode	Normally white		
Unit outline dimension	$82.8(W) \times 69.7(H) \times 3.3(D)$	mm	[Note3-1]
Mass	37	g	
Surface treatment	. 3H		

#### [Note 3-1]

Excluding protrusion. For detailed measurements and tolerances, please refer to Fig. 1.

- *Cautions when you turn on or off the power supply
  - ① Turn on or off the power supply with simultaneously or the following sequence.

- ② The input signal of "MOD" Terminals (Pin No.3) must be low voltage when turning on the power supply and it is held until more than double vertical periods after VSHD is turned on completely and DATA is turned on completely. After then, it must be held high voltage until turning off the power supply.
- [Note 7-1] These are standard input voltages for gray scale. When VCOM is alternated polarity, these voltage should be alternated polarity. V0 (black) is different polarity alternating signal of VCOM. V4 (white) is the same polarity alternating signal of VCOM. Center voltage of each standard input voltage shift positive way for LCD characteristics (V0→V1→V2→V3→V4). This sift amount is adjusted so as to no flicker of each standard input voltage after DC bias voltage of VCOM and V0 is adjusted.
- [Note 7-2] DCLK,SPL,SPR,LBR,LP,PS,R0~R5,G0~G5 and B0~B5 terminals are applied.
- [Note 7:3] DCLK,SPL,SPR,LBR,LP,R0~R5,G0~G5 and B0~B5 terminals are applied.
- [Note 7-4] PS terminal is applied.
- [Note 7-5] MOD, CLS, SPS and U/L terminals are applied.
- [Note 7-6] VCOMAC should be alternated on VCOMDC every 1 horizontal period and 1 vertical period. VCOMDC bias is adjusted so as to minimize flicker or maximum contrast every each module.
- [Note 7-7] CS electrode driving signal should have the same phase and the amplitude as that for Common electrode driving signal.
  - B) Back light driving section

 $[\]mbox{\ensuremath{^{\star}}}$  The measuring method of the optical characteristics is shown by the following figure.

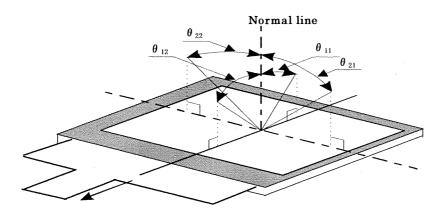

^{*} A measurement device is TOPCON luminance meter SR-3.(Viewing cone 1)

Measuring method (b) for optical characteristics

[Note 9-1] Viewing angle range is defined as follows.

6 o'clock direction

### Definition for viewing angle

### [Note 9-2] Definition of contrast ratio:

The contrast ratio is defined as follows:

Photo detector output with all pixels white(GS63)

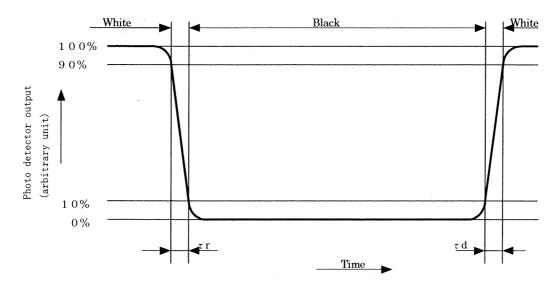

Contrast ratio(CR)= -

Photo detector output with all pixels black(GS0)

VCOMAC= 5.0Vp-p,V0= 3.2Vp-p,V4= 3.5Vp-p

# [Note 9-3] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 9-4] A measurement device is ELDIM EZContrast

### (10) Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards for TFT-LCD.

#### (11) Mechanical characteristics

#### 11-1) External appearance

See Fig. 1

#### 11-2) FPC characteristics

①Specific connector

FF0251SS1(JAE)

② Bending endurance of the bending slits portion(See Fig.1):

No line of the FPC is broken for the bending test (Bending radius=0.6mm and angle=90°) in 30 cycles.

#### (12) Handling Precautions

### 12-1) Insertion and taking out of FPC

Be sure insert and take out of the FPC into the connector of the set after turning off the power supply on the set side.

#### 12-2) Handling of FPC

FPC shall be bent only slit portion. The bending slit ① shall be bent uniformly on the whole slit portion with bending radius larger than 0.6mm, and only inner side (back side of the module).

Don't bend it outer side (display surface side).

Don't give the FPC too much force, for example, hanging the module with holding FPC.

#### 12-3) Installation of the module

- ① On mounting the module, be sure to fix the module on the same plane. Take care not to warp or twist the module.
- ② In case that no protective plate is attached on the panel surface, pay attention to the following points. In order to avoid the electrostatic discharge, design the cabinet with grounded conductive sheet inside and cover the module include edge of the polarizer with it

#### 12-4) Precaution when mounting

- ① The polarizer can be easily scratched. Handle it with sufficient care.
- ② If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.
- 3 Glass is used for the TFT-LCD panel. If it is dropped or bumped against a hard object, it may be broken. Handle it with sufficient care.
- ④ As the CMOS IC is used in this module, pay attention to static electricity when handling it. Take a measure for grounding on the human body.

#### 12-5) Others

- ① The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
- ② If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
- ③ If the LCD breaks, don't put internal liquid crystal into the mouth. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
- 4 Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- ⑤ Observe general precautions for all electronic components.
- © VCOM must be adjusted on condition of your final product. No adjustment causes the deterioration for display quality.
- The static image should not be displayed more than 5 minutes in order to prevent from occurrence of residual
- ® The LCD module has shield sheet to avoid light-leak from the LCD Panel's peripheral area (outside of Black Mask in the panel fringe).

However, at a dark circumstance, refracted light in the module inside can be visible through the slit between the Black Mask and Metal Bezel. Please pay attention to the above for your enclosure design.

#### (13) Forwarding form

a) Piling number of cartons: MAX.

b) Package quantity in one cartons: 1 0 0 pcs.

c) Carton size: 5 7 5 mm(W)  $\times$  3 6 0 mm(D)  $\times$  2 2 5 mm(H)

d) Total mass of 1 carton filled with full modules: 7700g

Fig.2 shows packing form.

#### **Environment**

(1)Temperature

:0~40°C

(2) Humidity

: 60%RH or less (at 40°C)

No dew condensation at low temperature and high humidity.

(3)Atmosphere

: Harmful gas, such as acid or alkali which bites electronic

components and/or wires, must not be detected.

(4)Period

: about 3 months

(5) Opening of the package: In order to prevent the LCD module from breakdown by electrostatic charges, please control the room humidity over 50%RH and open the package taking sufficient

countermeasures against electrostatic charges, such as

earth, etc.

### (14) Reliability Test Conditions for TFT LCD Module

Table 12

No.	Test items	Test conditions
1	High temperature storage test	Ta=+70°C 240h
2	Low temperature storage test	Ta=-20°C 240h
3	High temperature and high humidity operating test	Tp=+40°C, 95%RH 240h (But no condensation of dew)
4	High temperature operating test	Tp=+60°C 240h
5	Low temperature operating test	Tp=-10°C 240h
6	Electro static discharge test	$\pm 200 \mathrm{V} \cdot 200 \mathrm{pF} \left(0 \Omega\right)$ 1 time for each terminals
7	Shock test	980 m/s ² , 6 ms ±X, ±Y, ±Z 3 times for each direction (JIS C0041, A-7 Condition C)
8	Vibration test	Frequency range: 10Hz~55Hz  Stroke: 1.5 mm Sweep: 10Hz~55Hz  X,Y,Z 2 hours for each direction( total 6 hours)  (JIS C0040, A-10 Condition A)
9	Heat shock test	Ta=-20°C~+70°C / 5 cycles (1h) (1h)

[Note] Ta = Ambient temperature, Tp = Panel temperature

[Check items] In the standard condition, there shall be no practical problems that may affect the display function.

#### (15) Others

15-1) Indication of lot number

The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

Indicated contents of the label

LQ036Q1DA01 OOOOOO model No. lot No.

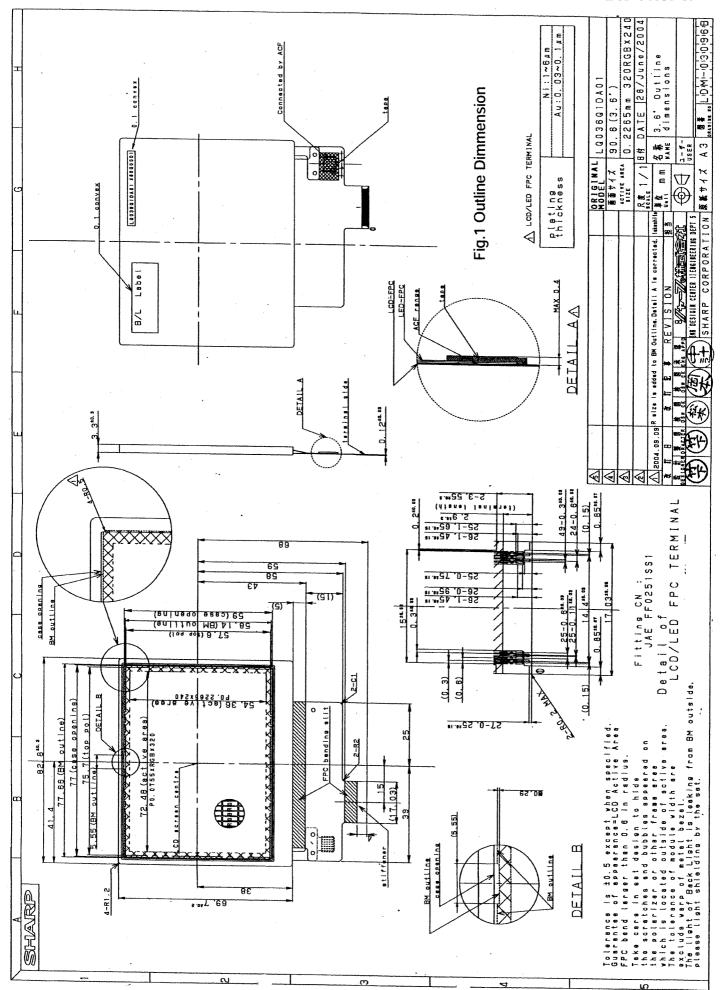

15-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulation: CFCS, Carbon tetrachloride, Halon

1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.
- 15-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and Sharp will cooperate and make efforts to solve the problems with mutual respect and good will.
