

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

**NOTICE**

These specification sheets are the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of these specification sheets may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of these specification sheets may be made by a third party.

For the stable supply of this module, the components of the module may be changed or purchased from more than one suppliers, based on these specification sheets. Please understand this situation and we will inform you in advance.

The application circuit examples in these specification sheets are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in these specification sheets. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in these specification sheets are designed for use in general electronic equipment designs, such as:

- Personal computers                      • Office automation                      • Telecommunication equipment
- Test and measurement equipment                      • Industrial control                      • Personal Digital Assistant
- Audio visual and multimedia equipment • Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals                      • Gas leakage sensor breakers                      • Alarm equipment                      • Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications                      • Nuclear power control equipment                      • Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of these specification sheets.

### 1. APPLICABLE SCOPE

This specification is applicable to TFT-LCD Module “LQ050Y3DC02” only.

### 2. General Description

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, Input FPC, a back light unit. Graphics and texts can be displayed on a 800×RGB×480 dots panel, four timing signals, serial interface, (typ. +3.3V) supply voltages for TFT-LCD panel driving and supply voltage for back light.

### 3. Mechanical (Physical) Specifications

Item	Specifications	Unit
Screen size	5.0	inch
Active area	108 (H)×64.8(V)	mm
Pixel format	800×480	Pixel

NOTE3:

The relation between the data input and the backlight lighting will recommend the above-mentioned input sequence. When the backlight is turned on before the panel operates, there is a possibility of abnormally displaying. The liquid crystal module is not damaged.

Please advise a power supply ON period that an input signal is not set to High-Z or it does not input an unusual signal.

\* The optical characteristics measurements are operated under a stable luminescence (IBL = 40mA) and a dark condition. (Refer to Fig.1)

Fig.1 Optical characteristics measurement method

【 Note 1 】 Definitions of viewing angle range

【 Note 2 】 Definition of contrast ratio

The contrast ratio is defined as the following

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance(brightness) with all pixels white}}{\text{Luminance(brightness) with all pixels black}}$$

**【 Note 3 】** Definition of response time

The response time is defined as the LCD optical switching time interval between “White” state and “Black” state. Rise time ( $T_{ON}$ ) is the time between photo detector output intensity changed from 90% to 10%. And fall time ( $T_{OFF}$ ) is the time between photo detector output intensity changed from 10% to 90%.

**【 Note 4 】** This shall be measured at center of the screen.

**【 Note 5 】** Definition of Uniformity

$$\text{Uniformity} = \frac{\text{Minimum Brightness}}{\text{Maximum Brightness}} \times 100 (\%)$$

The brightness should be measured on the 9-point as shown in the right figure.

**【 Note 6 】** This shall be measured on the 9-point as shown in the right figure.

$$\text{Luminance of white} = \frac{\text{Summation of the 9 - point Brightness}}{9}$$
