

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

This publication is the proprietary of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

The application circuit examples in this publication are provided to explain the representative applications of SHARP's devices and are not intended to guarantee any circuit design or permit any industrial property right or other rights to be executed. SHARP takes no responsibility for any problems related to any industrial property right or a third party resulting from the use of SHARP's devices, except for those resulting directly from device manufacturing processes.

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that occur in equipment using any of SHARP's devices, shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP's device.

SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structures and other contents described herein at any time without notice in order to improve design or reliability. Contact SHARP in order to obtain the latest specification sheets before using any SHARP's device. Manufacturing locations are also subject to change without notice.

Observe the following points when using any device in this publication. SHARP takes no responsibility for damage caused by improper use of the devices.

The devices in this publication are designed for use in general electronic equipment designs, such as:

- Personal computers
- Office automation
- Telecommunication equipment
- Test and measurement equipment
- Industrial control
- Personal digital assistant
- Audio visual and multimedia equipment
- Consumer electronics

The appropriate design measures should be taken to ensure reliability and safety when SHARP's devices are used for equipment such as:

- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals
- Gas leakage sensor breakers
- Alarm equipment
- Various safety devices etc.

SHARP's devices shall not be used for equipment that requires extremely high level of reliability, such as:

- Military and space applications
- Nuclear power control equipment
- Medical equipment for life support

Contact a SHARP representative, in advance, when intending to use SHARP's devices for any "specific" applications other than those recommended by SHARP.

Contact and consult with a SHARP representative if there are any questions about the contents of this publication.

(1) Application

This literature applies to LS037V7DW03.

(2) Overview

This module is a color transfective and active matrix LCD module incorporating CG-Silicon TFT (Continuous Grain-Silicon Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs (with control Function), an FPC(with DC-DC Converter), a back light and a back sealed casing.

It is composed control circuit. Graphics and texts can be displayed on a 480×3×640 dots panel with 262,144 colors by supplying.

This LCD module has multi resolution and multi colors functions. A resolution mode is selective in VGA (480H×640V) or QVGA (240H×320V). A Color mode is selective in 262,144 colors (18bit RGB) or 8 colors (3bit RGB).

It is a wide viewing-angle-mode (Vertical viewing angle:(±80°) Horizontal viewing angle: (±80°) ,CR ≥ 5).

(3) Mechanical specifications

Table 1

Parameter	Specifications	Units	Remarks
Screen size (Diagonal)	9.4 [3.7"] Diagonal	cm	
Display active area	56.16 (H) ×74.88 (V)	mm	
Pixel format	480(H)×640(V) (1 pixel = R+G+B dots)	pixels	
Dot pitch	0.039 (H) ×0.117 (V)	mm	
Pixel configuration	R,G,B vertical stripe		
Display mode	Normally Black		
Unit outline dimension	65.0(W)×89.2(H)×3.6(D)	mm	【Note3-1】
Mass	38	g	

【Note 3-1】 Excluding protrusion. For detailed measurements and tolerances, please refer to Fig. 1.

(4) Pixel configuration

(5) Input/Output terminal

5-1) TFT-LCD panel and Backlight driving section

44	R3	I	Red data signal	
45	R2	I	Red data signal	
46	R1	I	Red data signal	
47	R0	I	Red data signal(LSB)	
48	GND	-	Ground	
49	SMPSYNC	I	Selection for Vertical/ Horizontal synchronizing signal timing(clock timing)	【Note5-7】
50	SMPDATA	I	Selection for Red, Green and Blue data signal timing (clock timing)	【Note5-7】
51	ID1	-	Ground	

【Note5-1】 When superfluous current flows, please intercept current with a fuse etc.

【Note5-2】 See section(7-1)-(A) "※ Cautions when you turn on or off the power supply".

【Note5-3】 Selection for resolution mode

MO	Resolution
Low	VGA(480RGB×640)
High	QVGA(240RGB×320)

【Note5-4】 Selection for vertical scanning direction

U/L	Scanning direction (Pixel configuration)
High	Conventional scanning (X , 1) ↓ (X , Y)
Low	Inverted scanning (X , 1) ↑ (X , Y)

VGA mode: Y=640, QVGA mode: Y=320

【Note5-5】 Selection for horizontal scanning direction

LBR	Scanning direction (Pixel configuration)
High	Conventional scanning (1,Y) → (X,Y)
Low	Inverted scanning (1,Y) ← (X,Y)

VGA mode: X=480, QVGA mode: X=240

【Note5-6】

DEN makes it possible to take effective data timing. Horizontal Data Sampling Timing is shown in 7-2) Timing Characteristics of input signals.

【Note5-7】 Selection for synchronizing signal and data signal timing(clock timing)

SMPSYNC	Selection for Vertical/ Horizontal synchronizing signal timing(clock timing)	SMPDATA	Selection for Red, Green and Blue data signal timing(clock timing)
High	Rise edge of clock(CLKIN)	High	Rise edge of clock(CLKIN)
Low	Fall edge of clock(CLKIN)	Low	Fall edge of clock(CLKIN)

(6)Absolute Maximum Ratings

Table 3

Parameter	Symbol	Condition	Ratings	Unit	Remark
Power supply (COG driver / Digital)	VSHD	Ta=25°C	-0.3 ~ +4.0	V	
Input voltage (Digital)	VID	Ta=25°C	-0.3 ~ VSHD+0.3	V	[Terminal]
Operating temperature(Panel surface)	T opp	-	-10 ~ 60	°C	【Note6-1】
Storage temperature	T stg	-	-20 ~ 70	°C	【Note6-1】
LED current	I _L	Ta=25°C	30	mA	【Note6-2】

[Terminal] INI, VSYNC, HSYNC, MO, UD, LR, CLK, R0 ~ R5, G0 ~ G5, B0 ~ B5, DEN, RESB

【Note6-1】 Humidity: 95%RH Max.(at Ta ≤ 40°C). Maximum wet-bulb temperature is less than 39°C (at Ta > 40°C). Condensation of dew must be avoided.

【Note6-2】 (Provisional plan) LED current should be as per below figure.

(7)Electrical characteristics

7-1) Recommended operating conditions

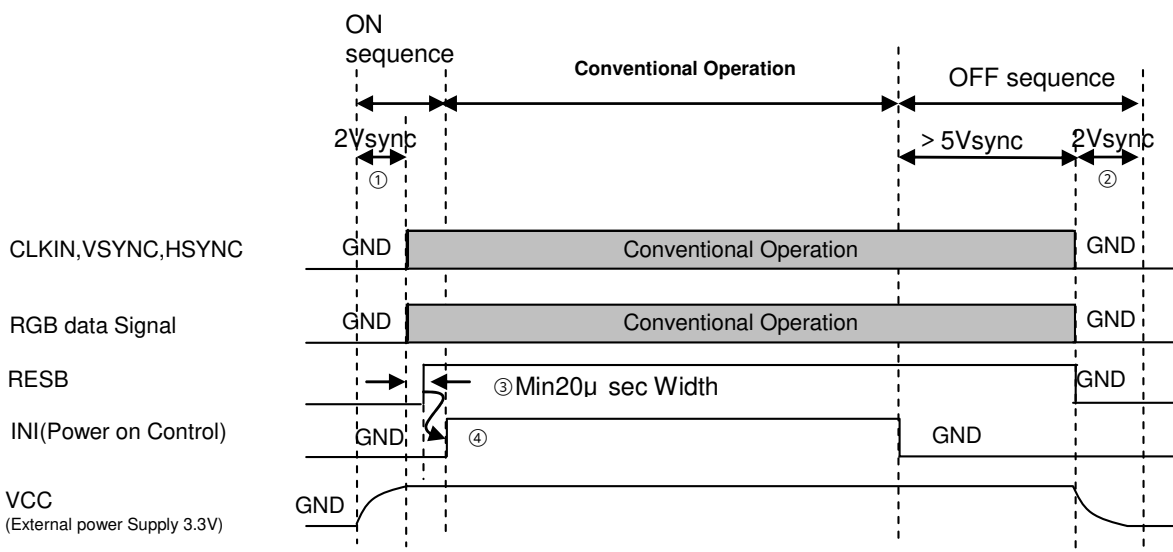

A) TFT-LCD panel driving section

Table4

GND=0V

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remarks
Supply voltage for COG driver	VSHD	+3.0	+3.3	+3.6	V	
Input voltage (Low)	VILS	GND	-	0.2VSHD	V	【Note 7-1】
Input voltage (High)	VIHS	0.8VSHD	-	VSHD	V	【Note 7-1】
Input current (Low)	IILS	-	-	10	μA	【Note 7-1】
Input current (High)	IHS	-	-	10	μA	【Note 7-1】

※ Cautions when you turn on or off the power supply

- (1) After VCC is ON ,please make sure to start HVIF(CLK,HSYNC,VSYNC,RGB data signal) synchronized signal before INI(Power on control) becomes High.
- (2) Please keep HVIF(CLK,HSYNC,VSYNC,RGB data signal) synchronized signal High for more than 5 vertical period after INI becomes Low to shut down VCC.
- (3) Stabilize VCC (+ 3.3V) within double vertical periods.
- (4) VCC is stabilized to GND within double vertical periods.
- (5) When the power supply is on again after Power Supply Off sequence ,please put the RESB signal before Power Supply On sequence. RESB signal needs LOW level more than $20\mu\text{sec}$ after VCC(+3.3V) ON.
- (6) Please Set RESB signal before INI Signal.

【Note 7-1】 INI,VSYNC,HSYNC,MO,UD,LR,CLK,R0 ~ R5,G0 ~ G5,B0 ~ B5,DEN,RESB terminals are applied.

Each voltage should be kept to satisfy absolute maximum ratings.

If the applied voltage goes beyond absolute maximum ratings, the LCD module may be broken eternally.

B) Back light driving section

Table 5

Ta=25

Parameter	Symbol	MIN	TYP	MAX	Units	Remarks terminal
LED voltage(VL)	V_L	-	27.9	31.5	V	【Note 7-2】
LED current(IL)	I_L	-	16	20	mA	
Power consumption	W_L	-	446.4	630	mW	【Note 7-3】

【Note 7-2】 V_L (TYP) at I_L (16mA). V_L (MAX) at I_L (20mA).

【Note 7-3】 Calculated reference value. $W_L=(V_L \times I_L)$

7-2) Timing Characteristics of input signals

Table 6 AC Characteristics

Parameter	Symbol	MODE	Min.	Typ.	Max.	Unit	Note
CLK Period	t _{CLK}	VGA QVGA	38 152	39.7 158.8	41.7 167	ns	CLK

	↑	GS1	0	0	0	0	0	0	0	0	0	0	0	0	1	0	0	0	0	0
	Darker	GS2	0	0	0	0	0	0	0	0	0	0	0	0	0	1	0	0	0	0
	↑	↓				↓					↓					↓				
	↓	↓				↓					↓					↓				
	Brighter	GS61	0	0	0	0	0	0	0	0	0	0	0	0	1	0	1	1	1	1
	↓	GS62	0	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1
	Bleu	GS63	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1

0 : Low level voltage 1 : High level voltage

Each basic color can be displayed in 64 gray scales from 6 bit data signals. According to the combination of total 18 bit data signals, the 262,144-color display can be achieved on the screen.

(9)Optical characteristics

9-1) Not driving the Back light condition

Table 9

Ta=25°C

Parameter	Symbol	Condition	Min	Typ	Max	Unit	Remarks
Viewing angle range	θ _{21,22}	CR ≥ 1.2	30	40	-	degree	[Note 9-1,2]
	θ _{11, 12}		30	40	-	degree	
Contrast ratio	CR _{max}	θ = 0°	-	2	-		[Note 9-2,4]
Response time	Rise	θ = 0°	-	10	20	ms	[Note 9-3]
	Fall		-	10	20	ms	
White chromaticity	x	θ = 0°	0.25	0.30	0.35		[Note 9-4]
	y		0.30	0.35	0.40		
Reflection ratio	R	θ = 0°	2	4	-	%	[Note 9-5]

* The measuring method of the optical characteristics is shown by the following figure.

* A measurement device is Otsuka luminance meter LCD5200.(With the diffusion reflection unit.)

Measuring method (a) for optical characteristics

9-2) Driving the Back light condition

Table 10

Ta=25°C

Parameter		Symbol	Condition	Min	Typ	Max	Unit	Remarks
Viewing angle range		θ21,22	CR ≥ 5	40	80	-	degree	[Note 9-1,2,6]
		θ11,12		40	80	-	degree	
Contrast ratio		Crmax	θ = 0°	100	200	-		[Note 9-2]
Response time	Rise	τr		-	15	20	ms	[Note 9-3]
	Fall	τd		-	20	30	ms	
White chromaticity		X		0.26	0.31	0.36		
		Y	0.28	0.33	0.38			
NTSC ratio		S		-	35	-	%	
Brightness		Y	θ = 0°	130	200	-	cd/m ²	I _L =16mA
Uniformity		U	θ = 0°	60	-	-	%	[Note 9-7]

* The measuring method of the optical characteristics is shown by the following figure.

* A measurement device is TOPCON luminance meter SR-3.(Viewing cone 1)

【Measuring method for optical characteristics】

【Note 9-1】 Viewing angle range is defined as follows.

【Definition for viewing angle】

【Note 9-2】 Definition of contrast ratio:

The contrast ratio is defined as follows:

$$\text{Contrast ratio (CR)} = \frac{\text{Photodetector output with all pixels white(GS63)}}{\text{Photodetector output with all pixels black(GS0)}}$$

$$V_{\text{COMAC}} = 5.0\text{V}_{\text{p-p}}$$

【Note 9-3】 Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

【Note 9-4】 A measurement device is Minolta CM-2002.

【Note 9-5】 Definition of reflection ratio

$$\text{Reflection ratio} = \frac{\text{Light detected level of the reflection by the LCD module}}{\text{Light detected level of the reflection by the standard white board}}$$

【Note 9-6】 A measurement device is ELDIM EZContrast

【Note 9-7】 Definition of Uniformity

$$\text{Uniformity} = \frac{\text{Minimum Brightness}}{\text{Maximum Brightness}} \times 100(\%)$$

The brightness should be measured on the 9-point as shown in the right figure.

(10) Display quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standards TFT-LCD.

(11) Mechanical characteristics

11-1) External appearance

See Fig. 1 Outline Dimension

11-2) FPC (for LCD panel) characteristics

Specific connector

LCD-FPC: HIROSE FH23-51S-0.3SHAW(05) (Bottom contact only)

(12) Handling Precautions

12-1) Insertion and taking out of FPCs

- (1) Be sure insert and take out of the FPC into the connector of the set after turning off the power supply on the set side.

12-2) Handling of FPCs

- (1) The FPC for LCD panel shall be bent only slit portion. The bending slit shall be bent uniformly on the whole slit portion with bending radius larger than 1.0mm ,and only inner side (back side of the module). Don't bend it outer side (display surface side).
- (2) Don't give the FPCs too large force, for example, hanging the module with holding FPC. Moreover, Do not put stress on the components mounted on FPC to avoid failure of the components.

12-3) Installation of the module

- (1) On mounting the module, be sure to fix the module on the same plane. Taking care not to warp or twist the module.

12-4) Precaution when mounting

- (1) If water droplets and oil attaches to it for a long time, discoloration and staining occurs. Wipe them off immediately.
- (2) Glass is used for the TFT-LCD panel. If it is dropped or bumped against a hard object, it may be broken. Handle it with sufficient care.
- (3) As the CMOS IC is used in this module, pay attention to static electricity when handling it. Take a measure for grounding on the human body.

12-5) Others

- (1) The liquid-crystal is deteriorated by ultraviolet rays. Do not leave it in direct sunlight and strong ultraviolet rays for many hours.
- (2) If it is kept at a temperature below the rated storage temperature, it becomes coagulated and the panel may be broken. Also, if it is kept at a temperature above the rated storage temperature, it becomes isotropic liquid and does not return to its original state. Therefore, it is desirable to keep it at room temperature as much as possible.
- (3) If the LCD breaks, don't put internal liquid crystal into the mouth. When the liquid crystal sticks to the hands, feet and clothes, wash it out immediately.
- (4) Wipe off water drop or finger grease immediately. Long contact with water may cause discoloration or spots.
- (5) Observe general precautions for all electronic components.
- (6) Static image should not be displayed more than 5 minutes in order to prevent from occurrence of residual image.

(13) Reliability Test Conditions for TFT-LCD Module

Table 11

No.	Test items	Test conditions
1	High temperature storage test	Ta=+70°C 240h
2	Low temperature storage test	Ta=-20°C 240h
3	High temperature and high humidity operating test	Tp=+40°C , 95%RH 240h (But no condensation of dew)
4	High temperature operating test	Tp=+60°C 240h
5	Low temperature operating test	Tp=-10°C 240h
6	Electro static discharge test	±200V·200pF(0Ω) to Terminals(Contact) (1 time for each terminals)
7	Shock tset	980 m/s ² , 6 ms ±X,±Y,±Z 3 times for each direction (JIS C0041, A-7 Condition C)
8	Vibration test	Frequency range: 10Hz ~ 55 ~ 10Hz Stroke: 1.5 mm Sweep: 10Hz ~ 55Hz X,Y,Z 2 hours for each direction (total 6 hours) (JIS C0040,A- 10 Condition A)
9	Heat shock test	Ta=- 20°C ~ +70°C / 5 cycles (1h) (1h)

【Note】 Ta = Ambient temperature, Tp = Panel temperature

【Check items】

- Test No.1 ~ 9

In the standard condition, there shall be no practical problems that may affect the display function.

(14) Others

14-1) Indication of lot number

The lot number is shown on a label. Attached location is shown in Fig.1 (Outline Dimensions).

14-2) Used Regulation of Chemical Substances Breaking Ozone Stratum

Substances with the object of regulating: CFCS, Carbon tetrachloride, Halon

1,1,1-Trichloro ethane (Methyl chloroform)

- (a) This LCD module, Constructed part and Parts don't contain the above substances.
- (b) This LCD module, Constructed part and Parts don't contain the above substances in processes of manufacture.

14-3) If some problems arise about mentioned items in this document and other items, the user of the TFT-LCD module and Sharp will cooperate and make efforts to solve the problems with mutual respect and good will.

(15) Forwarding form (fig2)

- a) Piling number of cartons : 8
- b) Package quality in one cartons : 100 pcs
- c) Carton size : 575 mm × 360 mm × 225 mm
- d) Total mass of 1 carton filled with full modules : TBD

Conditions for storage

Environment

- (1) Temperature : 0 ~ 40°C
- (2) Humidity : 60%RH or less (at 40°C)
No dew condensation at low temperature and high humidity.
- (3) Atmosphere : Harmful gas, such as acid or alkali which bites electronic components and/or wires, must not be detected.
- (4) Period : about 3 months
- (5) Opening of the package : In order to prevent the LCD module from breakdown by electrostatic charges, please control the room humidity over 50%RH and open the package taking sufficient countermeasures against electrostatic charges, such as earth, etc.

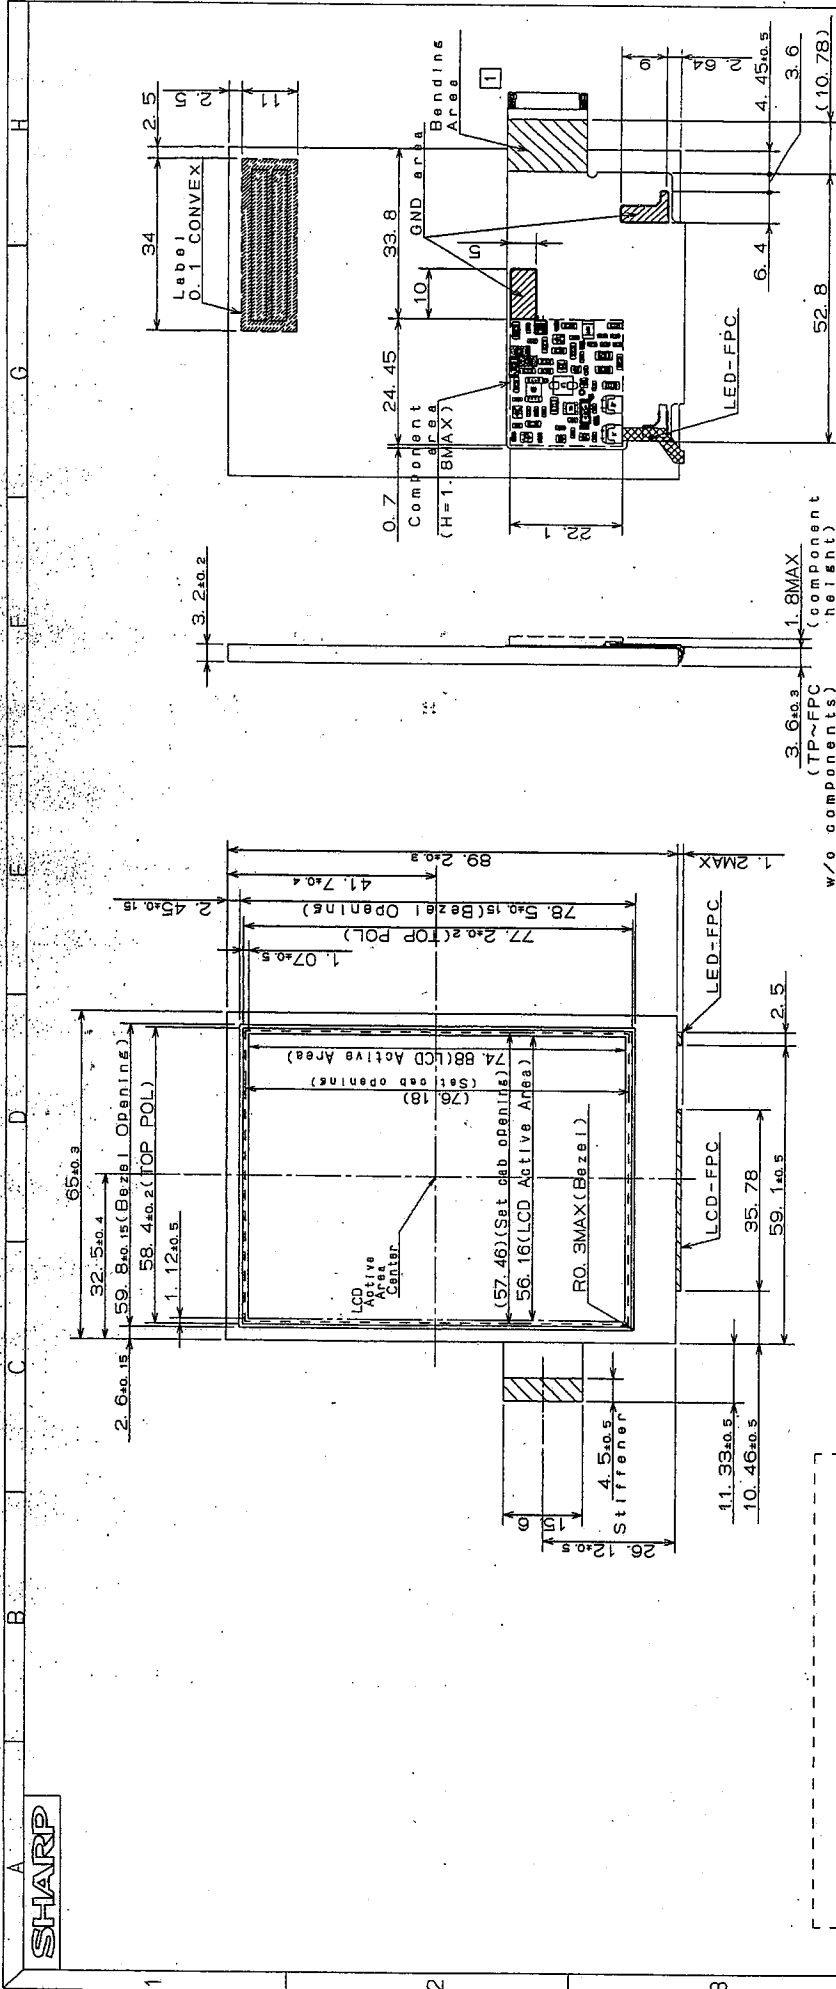

Fig.1 Outline dimensions

- LCD-FPC bend radius: Min. 0.6mm
- Guarantee of appearance = LCD Active Area
- General tolerance is ±0.5mm
- Take care in set design to hide the scratches and bubbles appeared on the polarizer or other frame area which is located outside of guarantee area.
- The tolerance of module width are exclude warp of case and FPC.
