

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## FEATURES

- **SO-8 Package (LTC1595)**
- **DNL and INL: 1LSB Max**
- **Low Glitch Impulse: 1nV-s Typ**
- **Fast Settling to 1LSB: 2 $\mu$ s (with LT1468)**
- Pin Compatible with Industry Standard 12-Bit DACs: DAC8043 and DAC8143/AD7543
- 4-Quadrant Multiplication
- Low Supply Current: 10 $\mu$ A Max
- Power-On Reset
  - LTC1595/LTC1596: Resets to Zero-Scale
  - LTC1596-1: Resets to Mid-Scale
- 3-Wire SPI and MICROWIRE Compatible Serial Interface
- Daisy-Chain Serial Output (LTC1596)
- Asynchronous Clear Input
  - LTC1596: Clears to Zero-Scale
  - LTC1596-1: Clears to Mid-Scale

## APPLICATIONS

- Process Control and Industrial Automation
- Software Controlled Gain Adjustment
- Digitally Controlled Filter and Power Supplies
- Automatic Test Equipment

## DESCRIPTION

The **LTC<sup>®</sup>1595/LTC1596/LTC1596-1** are serial input, 16-bit multiplying current output DACs. The LTC1595 is pin and hardware compatible with the 12-bit DAC8043 and comes in 8-pin PDIP and SO packages. The LTC1596 is pin and hardware compatible with the 12-bit DAC8143/AD7543 and comes in the 16-pin SO wide package.

Both are specified over the industrial temperature range. Sensitivity of INL to op amp  $V_{OS}$  is reduced by five times compared to the industry standard 12-bit DACs, so most systems can be easily upgraded to true 16-bit resolution and linearity without requiring more precise op amps.

These DACs include an internal deglitching circuit that reduces the glitch impulse by more than ten times to less than 1nV-s typ.

The DACs have a clear input and a power-on reset. The LTC1595 and LTC1596 reset to zero-scale. The LTC1596-1 is a version of the LTC1596 that resets to mid-scale.

LT, LT, LTC, LTM, Linear Technology and the Linear logo are registered trademarks of Linear Technology Corporation. All other trademarks are the property of their respective owners.

## TYPICAL APPLICATION

### SO-8 Multiplying 16-Bit DAC Has Easy 3-Wire Serial Interface

### Integral Nonlinearity

## TYPICAL PERFORMANCE CHARACTERISTICS

## PIN FUNCTIONS

### LTC1595

**V<sub>REF</sub> (Pin 1):** Reference Input.

**R<sub>FB</sub> (Pin 2):** Feedback Resistor. Normally tied to the output of the current to voltage converter op amp.

**OUT1 (Pin 3):** Current Output Pin. Tie to inverting input of current to voltage converter op amp.

**GND (Pin 4):** Ground Pin.

**$\overline{\text{LD}}$  (Pin 5):** The Serial Interface Load Control Input. When  $\overline{\text{LD}}$  is pulled low, data is loaded from the shift register into the DAC register, updating the DAC output.

**SRI (Pin 6):** The Serial Data Input. Data on the SRI pin is latched into the shift register on the rising edge of the serial clock. Data is loaded MSB first.

**CLK (Pin 7):** The Serial Interface Clock Input.

**V<sub>DD</sub> (Pin 8):** The Positive Supply Input.  $4.5\text{V} \leq V_{\text{DD}} \leq 5.5\text{V}$ . Requires a bypass capacitor to ground.

### LTC1596/LTC1596-1

**OUT1 (Pin 1):** True Current Output Pin. Tie to inverting input of current to voltage converter op amp.

**OUT2 (Pin 2):** Complement Current Output Pin. Tie to analog ground.

**AGND (Pin 3):** Analog Ground Pin.

**STB1, STB2,  $\overline{\text{STB3}}$ , STB4 (Pins 4, 8, 10, 11):** Serial Interface Clock Inputs. STB1, STB2 and STB4 are rising edge triggered inputs.  $\overline{\text{STB3}}$  is a falling edge triggered input (see Truth Tables).

**$\overline{\text{LD1}}$ ,  $\overline{\text{LD2}}$  (Pins 5, 9):** Serial Interface Load Control Inputs. When  $\overline{\text{LD1}}$  and  $\overline{\text{LD2}}$  are pulled low, data is loaded from the shift register into the DAC register, updating the DAC output (see Truth Tables).

**SRO (Pin 6):** The Output of the Shift Register. Becomes valid on the active edge of the serial clock.

**SRI (Pin 7):** The Serial Data Input. Data on the SRI pin is latched into the shift register on the active edge of the serial clock. Data is loaded MSB first.

**DGND (Pin 12):** Digital Ground Pin.

**$\overline{\text{CLR}}$  (Pin 13):** The Clear Pin for the DAC. Clears DAC to zero-scale when pulled low on LTC1596. Clears DAC to mid-scale when pulled low on LTC1596-1. This pin should be tied to V<sub>DD</sub> for normal operation.

**V<sub>DD</sub> (Pin 14):** The Positive Supply Input.  $4.5\text{V} \leq V_{\text{DD}} \leq 5.5\text{V}$ . Requires a bypass capacitor to ground.

**V<sub>REF</sub> (Pin 15):** Reference Input.

**R<sub>FB</sub> (Pin 16):** Feedback Resistor. Normally tied to the output of the current to voltage converter op amp.

## TIMING DIAGRAM (LTC1595)

**BLOCK DIAGRAM** (LTC1596/LTC1596-1)

**TIMING DIAGRAM** (LTC1596/LTC1596-1)

## APPLICATIONS INFORMATION

### Description

The LTC1595/LTC1596 are 16-bit multiplying DACs which have serial inputs and current outputs. They use precision R/2R technology to provide exceptional linearity and stability. The devices operate from a single 5V supply and provide  $\pm 10V$  reference input and voltage output ranges when used with an external op amp. These devices have a proprietary deglitcher that reduces glitch impulse to 1nV-s over a 0V to 10V output range.

### Serial I/O

The LTC1595/LTC1596 have SPI/MICROWIRE compatible serial ports that accept 16-bit serial words. Data is accepted MSB first and loaded with a load pin.

The 8-pin LTC1595 has a 3-wire interface. Data is shifted into the SRI data input on the rising edge of the CLK pin. At the end of the data transfer, data is loaded into the DAC register by pulling the  $\overline{LD}$  pin low (see LTC1595 Timing Diagram).

The 16-pin LTC1596 can operate in identical fashion to the LTC1595 but offers additional pins for flexibility. Four clock pins are available STB1, STB2,  $\overline{STB3}$  and STB4. STB1, STB2 and STB4 operate like the CLK pin of the LTC1595, capturing data on their rising edges.  $\overline{STB3}$  captures data on its falling edge (see Truth Table 1).

The LTC1596 has two load pins,  $\overline{LD1}$  and  $\overline{LD2}$ . To load data, both pins must be taken low. If one of the pins is grounded, the other pin will operate identically to LTC1595's  $\overline{LD}$  pin. An asynchronous clear input (CLR) resets the LTC1596 to zero-scale (and the LTC1596-1 to mid-scale) when pulled low (see Truth Table 2).

The LTC1596 also has a data output pin SRO that can be connected to the SRI input of another DAC to daisy chain multiple DACs on one 3-wire interface (see LTC1596 Timing Diagram).

### Unipolar (2-Quadrant Multiplying) Mode ( $V_{OUT} = 0V$ to $-V_{REF}$ )

The LTC1595/LTC1596 can be used with a single op amp to provide 2-quadrant multiplying operation as shown in Figure 1. With a fixed  $-10V$  reference, the circuits shown give a precision unipolar 0V to 10V output swing.

Figure 1. Unipolar Operation (2-Quadrant Multiplication)  $V_{OUT} = 0V$  to  $-V_{REF}$

Table 1. Unipolar Binary Code Table

DIGITAL INPUT BINARY NUMBER IN DAC REGISTER				ANALOG OUTPUT $V_{OUT}$
MSB		LSB		
1111	1111	1111	1111	$-V_{REF}$ (65,535/65,536)
1000	0000	0000	0000	$-V_{REF}$ (32,768/65,536) = $-V_{REF}/2$
0000	0000	0000	0001	$-V_{REF}$ (1/65,536)
0000	0000	0000	0000	0V

## APPLICATIONS INFORMATION

### Bipolar (4-Quadrant Multiplying) Mode ( $V_{OUT} = -V_{REF}$ to $V_{REF}$ )

The LTC1595/LTC1596 can be used with a dual op amp and three external resistors to provide 4-quadrant multiplying operation as shown in Figure 2 (last page). With a fixed 10V reference, the circuits shown give a precision bipolar  $-10V$  to  $10V$  output swing. Using the LTC1596-1 will cause the power-on reset and clear pin to reset the DAC to mid-scale (bipolar zero).

### Op Amp Selection

Because of the extremely high accuracy of the 16-bit LTC1595/LTC1596, thought should be given to op amp selection in order to achieve the exceptional performance of which the part is capable. Fortunately, the sensitivity of INL and DNL to op amp offset has been greatly reduced compared to previous generations of multiplying DACs.

Op amp offset will contribute mostly to output offset and gain and will have minimal effect on INL and DNL. For example, a  $500\mu V$  op amp offset will cause about 0.55LSB

INL degradation and 0.15LSB DNL degradation with a 10V full-scale range. The main effects of op amp offset will be a degradation of zero-scale error equal to the op amp offset, and a degradation of full-scale error equal to twice the op amp offset. For example, the same  $500\mu V$  op amp offset will cause a 3.3LSB zero-scale error and a 6.5LSB full-scale error with a 10V full-scale range.

Op amp input bias current ( $I_{BIAS}$ ) contributes only a zero-scale error equal to  $I_{BIAS}(R_{FB}) = I_{BIAS}(R_{REF}) = I_{BIAS}(7k)$ . Table 2 shows a selection of LTC op amps which are suitable for use with the LTC1595/LTC1596. For a thorough discussion of 16-bit DAC settling time and op amp selection, refer to Application Note 74, “*Component and Measurement Advances Ensure 16-Bit DAC Settling Time.*”

### Grounding

As with any high resolution converter, clean grounding is important. A low impedance analog ground plane and star grounding should be used.  $I_{OUT2}$  (LTC1596) and GND (LTC1595) must be tied to the star ground with as low a resistance as possible.

**Table 2. 16-Bit Settling Time for Various Amplifiers Driven by the LT1595 DAC. LT1468 (Shaded) Offers Fastest Settling Time While Maintaining Accuracy Over Temperature**

AMPLIFIER	CONSERVATIVE SETTLING TIME AND COMPENSATION VALUE		COMMENTS
LT1001	120 $\mu s$	100pF	Good Low Speed Choice
LT1007	19 $\mu s$	100pF	$I_B$ Gives $\approx 1$ LSB Error at 25°C
LT1013	75 $\mu s$	150pF	$\approx 1$ LSB Error Due to $V_{OS}$ Over Temperature
LT1077	200 $\mu s$	100pF	
LT1097	120 $\mu s$	75pF	Good Low Speed Choice
LT1112	120 $\mu s$	100pF	Good Low Speed Choice Dual
LT1178	450 $\mu s$	100pF	Low Power Dual
LT1468	2.5 $\mu s$	30pF	Fastest Settling with 16-Bit Performance

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/designtools/packaging/> for the most recent package drawings.

**N8 Package**  
**8-Lead PDIP (Narrow .300 Inch)**  
 (Reference LTC DWG # 05-08-1510 Rev I)

**NOTE:**

1. DIMENSIONS ARE  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$

\*THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS.  
 MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .010 INCH (0.254mm)

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/designtools/packaging/> for the most recent package drawings.

### S8 Package 8-Lead Plastic Small Outline (Narrow .150 Inch) (Reference LTC DWG # 05-08-1610 Rev G)

- NOTE:
1. DIMENSIONS IN  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$
  2. DRAWING NOT TO SCALE
  3. THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS. MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED  $.006"$  ( $0.15\text{mm}$ )
  4. PIN 1 CAN BE BEVEL EDGE OR A DIMPLE

S08 REV G 0212

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/designtools/packaging/> for the most recent package drawings.

### SW Package 16-Lead Plastic Small Outline (Wide .300 Inch) (Reference LTC DWG # 05-08-1620)

- NOTE:
- DIMENSIONS IN  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$
  - DRAWING NOT TO SCALE
  - PIN 1 IDENT, NOTCH ON TOP AND CAVITIES ON THE BOTTOM OF PACKAGES ARE THE MANUFACTURING OPTIONS. THE PART MAY BE SUPPLIED WITH OR WITHOUT ANY OF THE OPTIONS
  - THESE DIMENSIONS DO NOT INCLUDE MOLD FLASH OR PROTRUSIONS. MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED  $.006^*$  ( $0.15\text{mm}$ )

S16 (WIDE) 0502

**REVISION HISTORY** (Revision history begins at Rev B)

REV	DATE	DESCRIPTION	PAGE NUMBER
B	02/12	Removed 16-Lead PDIP	1, 2
C	8/15	Fixed errors in Table 3	16

# LTC1595/LTC1596/LTC1596-1

## TYPICAL APPLICATION

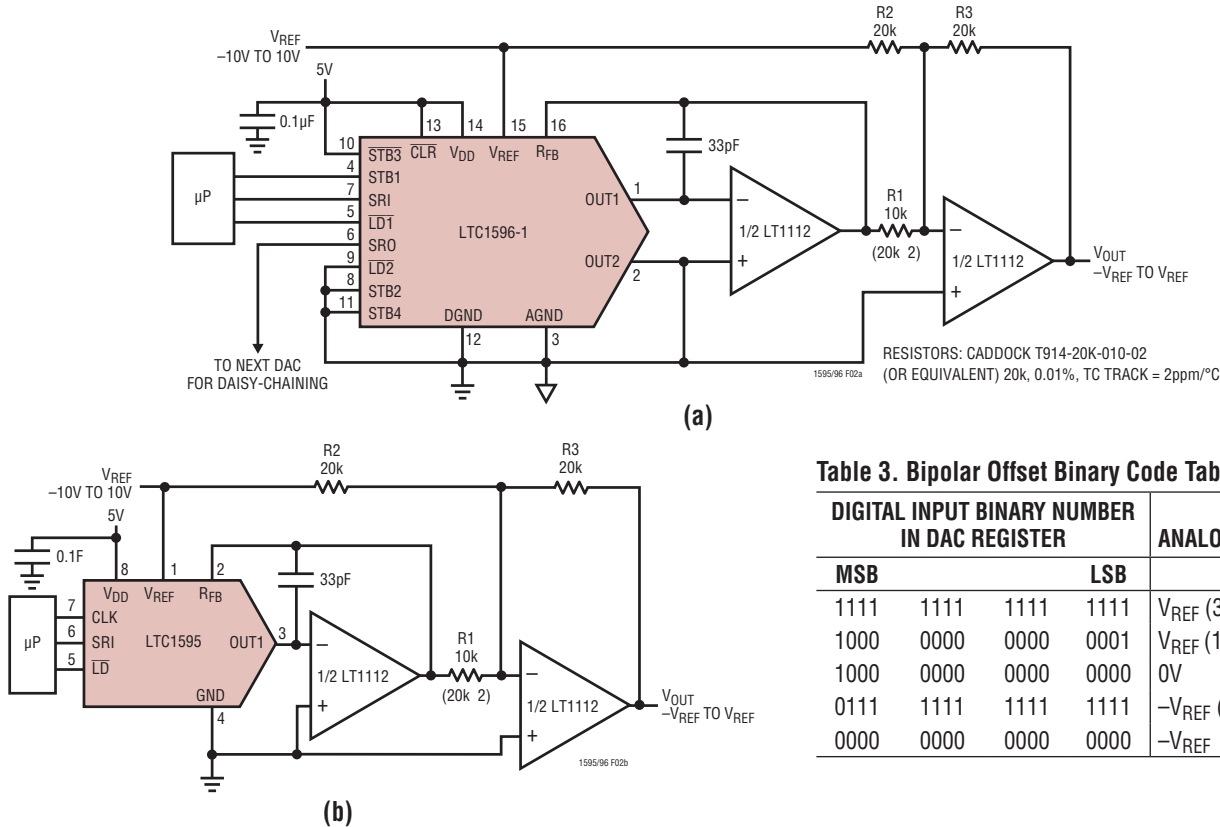

Table 3. Bipolar Offset Binary Code Table

DIGITAL INPUT BINARY NUMBER IN DAC REGISTER				ANALOG OUTPUT $V_{OUT}$
MSB		LSB		
1111	1111	1111	1111	$V_{REF}$ (32,767/32,768)
1000	0000	0000	0001	$V_{REF}$ (1/32,768)
1000	0000	0000	0000	0V
0111	1111	1111	1111	$-V_{REF}$ (1/32,768)
0000	0000	0000	0000	$-V_{REF}$
