## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## feATURES

- Supply Current $150 \mu \mathrm{~A}$ (Max per Amplifier) Guaranteed from $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
- Offset Voltage $3 \mu \mathrm{~V}$ (Max, $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ )
- Offset Voltage Drift $30 \mathrm{nV} /{ }^{\circ} \mathrm{C}$ (Max, $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ )
- Guaranteed Specifications from $-55^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ (LTC2054MP)
- Common Mode Input Range from $\mathrm{V}^{-}$to $\mathrm{V}^{+}-0.5 \mathrm{~V}$
- Output Swings Rail-to-Rail
- Voltage Gain: 140dB (Typ)
- PSRR and CMRR: 130dB (Typ)
- Input Bias Current: 1pA (Typ, $25^{\circ} \mathrm{C}$ )
- Noise: $1.6 \mu \mathrm{~V}$ P-p $(0.01 \mathrm{~Hz}$ to 10 Hz Typ)
- Supply Operation:
2.7V to 6V (LTC2054/LTC2055)
2.7V to $\pm 5.5 \mathrm{~V}$ (LTC2054HV/LTC2055HV)
- Low Profile (1mm) TSOT-23, MS8 and
$3 \mathrm{~mm} \times 3 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ DFN Packages

## APPLICATIONS

- Thermocouple Amplifiers
- Electronic Scales
- Medical Instrumentation
- Strain Gauge Amplifiers
- High Resolution Data Acquisition
- DC Accurate RC Active Filters
- Low Side Current Sense
- Battery-Powered Systems

## DESCRIPTIOn

The LTC®2054/LTC2055 are low power, low noise, single/ dual, zero-drift operational amplifiers with an extended temperature version (LTC2054MP) that has guaranteed specifications from $-55^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$. They are available in TSOT-23 (ThinSOT™) and MS8 packages. For space limited applications, the LTC2055 is also available in a $3 \mathrm{~mm} \times 3 \mathrm{~mm} \times 0.8 \mathrm{~mm}$ dual fine pitch leadless package (DFN). They operate from a single 2.7 V minimum supply and support $\pm 5 \mathrm{~V}$ applications. The current consumption is typically $150 \mu \mathrm{~A}$ for the LTC2054 and $130 \mu \mathrm{~A} / \mathrm{amp}$ for the LTC2055.
The LTC2054/LTC2055, despite their miniature size, feature uncompromising DC performance. The maximum input offset voltage and offset drift are $3.0 \mu \mathrm{~V}$ and $30 \mathrm{nV} /{ }^{\circ} \mathrm{C}$ over the $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ industrial temperature range. The almost zero DC offset and drift are supported with a power supply rejection ratio (PSRR) and common mode rejection ratio (CMRR) of 130 dB (typ).
The input common mode voltage ranges from the negative supply up to typically 0.5 V below the positive supply. The open-loop gain is typically 140dB. The LTC2054/LTC2055 also feature a $1.6 \mu \mathrm{~V}_{\mathrm{P}-\mathrm{P}} \mathrm{DC}$ to 10 Hz noise and a 500 kHz gain-bandwidth product.
$\overline{\mathbf{\Sigma T}}$, LT, LTC, LTM, Linear Technology and the Linear logo are registered trademarks of Linear Technology Corporation. ThinSOT is a trademark of Linear Technology Corporation. All other trademarks are the property of their respective owners.

## TYPICAL APPLICATION

## LTC2054/LTC2055

## ABSOLUTE MAXIMUUM RATINGS (Note 1)

Total Supply Voltage ( $\mathrm{V}^{+}$to $\mathrm{V}^{-}$) LTC2054/LTC2055 ..... 7V
LTC2054HV/LTC2055HV. ..... 12 V
Input Voltage $\left(\mathrm{V}^{+}+0.3 \mathrm{~V}\right)$ to $\left(\mathrm{V}^{-}-0.3 \mathrm{~V}\right)$
Output Short-Circuit Duration ..... IndefiniteSpecified Temperature Range (Note 2)LTC2054C/LTC2055C$0^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$
LTC2054I/LTC2055I ..... $-40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$
LTC2054H/LTC2055H ..... $-40^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$
LTC2054MP ..... $-55^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$
Storage Temperature Range ..... $-65^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$
DD Package ..... $-65^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$Lead Temperature (Soldering, 10 sec )TSOT23 and MS8 Packages$300^{\circ} \mathrm{C}$

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.
Note 2: The LTC2054/LTC2055 are designed, characterized and expected to meet the extended temperature limits of $-40^{\circ} \mathrm{C}$ and $125^{\circ} \mathrm{C}$. The LTC2054C/ LTC2055C/LTC2054HVC/LTC2055HVC are guaranteed to meet the temperature limits of $0^{\circ} \mathrm{C}$ and $70^{\circ} \mathrm{C}$. The LTC2054I/LTC2055I/LTC2054HVI/ LTC2055HVI are guaranteed to meet temperature limits of $-40^{\circ} \mathrm{C}$ and $85^{\circ} \mathrm{C}$. The LTC2054H/LTC2055H and LTC2054HVH/LTC2055HVH are guaranteed to meet the temperature limits of $-40^{\circ} \mathrm{C}$ and $125^{\circ} \mathrm{C}$. The LTC2054MP/LTC2054HVMP are guaranteed to meet the temperature limits of $-55^{\circ} \mathrm{C}$ and $150^{\circ} \mathrm{C}$.

Note 3: These parameters are guaranteed by design. Thermocouple effects preclude measurements of these voltage levels during automated testing.
Note 4: Limit is determined by high speed automated test capability. See Typical Characteristic curves for actual typical performance. For tighter specifications, please consult Linear Technology Marketing.
Note 5: The $\theta_{\mathrm{JA}}$ specified for the DD package is with minimal PCB heat spreading metal. Using expanded metal area on all layers of a board reduces this value.

## APPLICATIONS InFORMATION

## Clock Feedthrough, Input Bias Current

The LTC2054 and LTC2055 use auto-zeroing circuitry to achieve an almost zero DC offset over temperature, common mode voltage, and power supply voltage. The frequency of the clock used for auto-zeroing is typically 1.0 kHz . The term "clock feedthrough" is broadly used to indicate visibility of this clock frequency in the op amp output spectrum. There are typically two types of clock feedthrough in auto-zeroed op amps like the LTC2054/ LTC2055.

The first form of clock feedthrough is caused by the settling of the internal sampling capacitor and is input referred; that is, it is multiplied by the closed loop gain of the op amp. This form of clock feedthrough is independent of the magnitude of the input source resistance or the magnitude of the gain setting resistors. The LTC2054/LTC2055 have an input referred residue clock feedthrough of less then $0.2 \mu \mathrm{~V}_{\text {RMS }}$ at 1.0 kHz .

The second form of clock feedthrough is caused by the small amount of charge injection occurring during the sampling and holding of the op amp's input offset voltage. The current spikes are multiplied by the impedance seen at the input terminals of the op amp, and the resulting voltage spikes appear at the output multiplied by the closed loop gain of the op amp. To reduce this form of clock feedthrough, use smaller valued gain setting resistors and minimize the source resistance at the input. If the resistance seen at the inputs is less than $10 \mathrm{k} \Omega$, this form of clock feedthrough is less than the amount of residue clock feedthrough from the first form described above.

Placing a capacitor across the feedback resistor reduces either form of clock feedthrough by limiting the bandwidth of the closed loop gain.

Input bias current is defined as the DC current into the input pins of the op amp. The same current spikes that

DC to 10 Hz Noise

## APPLICATIONS INFORMATION

cause the second form of clock feedthrough described above, when averaged, dominate the DC input bias current of the op amp below $70^{\circ} \mathrm{C}$.

Attemperatures above $70^{\circ} \mathrm{C}$, the leakage of the ESD protection diodes on the inputs increases the input bias currents of both inputs in the positive direction, while the current caused by the charge injection stays relatively constant. At elevated temperatures (above $70^{\circ} \mathrm{C}$ ) the leakage current begins to dominate and both the negative and positive pins' input bias currents are in the positive direction (into the pins).

## Extended Common Mode Range

The LTC2054/LTC2055 input stage is designed to allow nearly rail-to-rail input common mode signals. In addition, signals that extend beyond the allowed input common mode range do not cause output phase inversion.

PACKAGE DESCRIPTION
DD Package
8-Lead Plastic DFN ( $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ )
(Reference LTC DWG \# 05-08-1698 Rev C)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS APPLY SOLDER MASK TO AREAS THAT ARE NOT SOLDERED

NOTE:

1. DRAWING TO BE MADE A JEDEC PACKAGE OUTLINE M0-229 VARIATION OF (WEED-1)
2. DRAWING NOT TO SCALE
3. ALL DIMENSIONS ARE IN MILLIMETERS
4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE

MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15 mm ON ANY SIDE
5. EXPOSED PAD SHALL BE SOLDER PLATED
6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION

ON TOP AND BOTTOM OF PACKAGE

## LTC2054/LTC2055

PACKAGE DESCRIPTION
MS8 Package
8-Lead Plastic MSOP
(Reference LTC DWG \# 05-08-1660 Rev F)

## PACKAGE DESCRIPTION

## S5 Package

5-Lead Plastic TSOT-23
(Reference LTC DWG \# 05-08-1635)

2. DRAWING NOT TO SCALE
3. DIMENSIONS ARE INCLUSIVE OF PLATING
4. DIMENSIONS ARE EXCLUSIVE OF MOLD FLASH AND METAL BURR
5. MOLD FLASH SHALL NOT EXCEED 0.254 mm
6. JEDEC PACKAGE REFERENCE IS MO-193
