

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## FEATURES

- **SIM Power Supply: 1.8V/3V at 50mA**
- **Input Voltage Range: 3V to 6V**
- **Controller Voltage Range: 1.2V to 4.4V**
- **14kV ESD On All SIM Contact Pins**
- **Meets All ETSI, IMT-2000 and ISO7816 SIM/Smart Card Interface Requirements**
- Level Translators to 1.8V or 3V
- 20 $\mu$ A Operating Current
- Logic-Controlled Shutdown ( $I_{SD} < 1\mu$ A)
- Available in a Low Profile, 16-Pin (3mm  $\times$  3mm) QFN Package

## APPLICATIONS

- SIM Interface in 3G Cellular Telephones
- Smart Card Readers

## DESCRIPTION

The **LTC<sup>®</sup>4555** provides power conversion and signal level shifting needed for low voltage 2.5G and 3G cellular telephones to interface with 1.8V or 3V subscriber identity modules (SIMs). The part meets all type approval requirements for 1.8V and 3V SIMs and smart cards. The part contains an LDO linear regulator to supply SIM power at either 1.8V or 3V from a 3V to 6V input. The output voltage is selected with a single pin and up to 50mA of load current can be supplied.

Internal level translators allow controllers operating with supplies as low as 1.2V to interface with 1.8V or 3V smart cards. Battery life is maximized by 20 $\mu$ A operating current and <1 $\mu$ A shutdown current. Board area is minimized by the 3mm  $\times$  3mm leadless QFN package.

LT, LT, LTC, LTM, Linear Technology and the Linear Logo are registered trademarks and ThinSOT is a trademark of Linear Technology Corporation. All other trademarks are the property of their respective owners.

## TYPICAL APPLICATION

**Typical SIM Interface**

4555 TA01

## ABSOLUTE MAXIMUM RATINGS

(Note 1)

$V_{BAT}$ , $DV_{CC}$ , $V_{CC}$ to GND .....	-0.3V to 6.5V
Digital Inputs to GND .....	-0.3V to 6.5V
CLK, RST, I/O to GND .....	-0.3V to $V_{CC} + 0.3V$
$V_{CC}$ Short-Circuit Duration .....	Infinite
Operating Temperature Range (Note 2)....	-40°C to 85°C
Junction Temperature .....	125°C
Storage Temperature Range.....	-65°C to 125°C

## PIN CONFIGURATION

## ORDER INFORMATION <http://www.linear.com/product/LTC4555#orderinfo>

LEAD FREE FINISH	TAPE AND REEL	PART MARKING	PACKAGE DESCRIPTION	TEMPERATURE RANGE
LTC4555EUD#PBF	LTC4555EUD#TRPBF	LAAA	16-Lead (3mm x 3mm) Plastic QFN	-40°C to 85°C

Consult LTC Marketing for parts specified with wider operating temperature ranges.

For more information on lead free part marking, go to: <http://www.linear.com/leadfree/>

For more information on tape and reel specifications, go to: <http://www.linear.com/tapeandreel/>. Some packages are available in 500 unit reels through designated sales channels with #TRMPBF suffix.

## ELECTRICAL CHARACTERISTICS

The ● denotes the specifications which apply over the full operating temperature range, otherwise specifications are at  $T_A = 25^\circ\text{C}$ .

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
$V_{BAT}$ Operating Voltage		● 3		6	V
$V_{BAT}$ Operating Current	$I_{CC} = 0\text{mA}$	●	20	30	$\mu\text{A}$
$V_{BAT}$ Shutdown Current	$\text{SHDN} = 0\text{V}$ , $V_{BAT} = 4.5\text{V}$	●		1	$\mu\text{A}$
$DV_{CC}$ Operating Voltage		● 1.2		4.4	V
$DV_{CC}$ Operating Current	$f_{CLK} = 1\text{MHz}$	●	5	10	$\mu\text{A}$
$DV_{CC}$ Shutdown Current	$\text{SHDN} = 0\text{V}$	●		1	$\mu\text{A}$
$DV_{CC}$ Undervoltage Lockout		● 0.5		1.1	V
$V_{CC}$ Output Voltage	$V_{SEL} = DV_{CC}$ , $V_{BAT} = 3\text{V}$ , $I_{VCC} = 50\text{mA}$		2.8		V
	$V_{SEL} = DV_{CC}$ , $V_{BAT} = 3.3\text{V to }6\text{V}$ , $I_{VCC} = 0\text{mA to }50\text{mA}$	●	3.0	3.2	V

$V_{CC}$ Turn-On Time	$\overline{\text{SHDN}} = 1$ , (Note 3)			0.5		ms
$V_{CC}$ Discharge Time to 1V	$\overline{\text{SHDN}} = 0$ , (Note 3)			0.5		ms

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** The LTC4555E is guaranteed to meet performance specifications from  $0^\circ\text{C}$  to  $85^\circ\text{C}$ . Specifications over the  $-40^\circ\text{C}$  to  $85^\circ\text{C}$  operating temperature range are assured by design, characterization and correlation with statistical process controls.

**Note 3:** Specification is guaranteed by design and not 100% tested in production.

## PIN FUNCTIONS

**SHDN (Pin 1):** Controller Driven Shutdown Pin. This pin should be high (DV<sub>CC</sub>) for normal operation and low to activate a low current shutdown mode.

**V<sub>SEL</sub> (Pin 2):** V<sub>CC</sub> Voltage Select Pin. A low level selects V<sub>CC</sub> = 1.8V while driving this pin to DV<sub>CC</sub> selects V<sub>CC</sub> = 3V.

**DV<sub>CC</sub> (Pin 3):** Supply Voltage for the Controller Side I/O Pins (C<sub>IN</sub>, R<sub>IN</sub>, DATA). When below 1.1V, the V<sub>CC</sub> supply is disabled. This pin should be bypassed with a 0.1µF ceramic capacitor close to the pin.

**NC (Pins 4, 6, 12, 16):** No Connect.

**V<sub>BAT</sub> (Pin 5):** V<sub>CC</sub> Supply Input. This pin can be between 3V and 6V for normal operation. V<sub>BAT</sub> quiescent current reduces to <1µA in shutdown. This pin should be bypassed with a 0.1µF ceramic capacitor close to the pin.

**V<sub>CC</sub> (Pin 7):** SIM Card V<sub>CC</sub> Supply. A 1µF low ESR capacitor needs to be connected close to the V<sub>CC</sub> pin for stable operation. This pin is discharged to GND during shutdown.

**I/O (Pin 8):** SIM-Side Data I/O. The SIM card output must be on an open-drain driver capable of sourcing >1mA.

**RST (Pin 9):** Reset Output Pin for the SIM Card.

**GND (Pin 10):** Ground for the SIM and Controller. Proper grounding and bypassing is required to meet 14kV ESD specifications.

**CLK (Pin 11):** Clock Output Pin for the SIM Card. This pin is pulled to ground during shutdown. Fast rising and falling edges necessitate careful board layout for the CLK node.

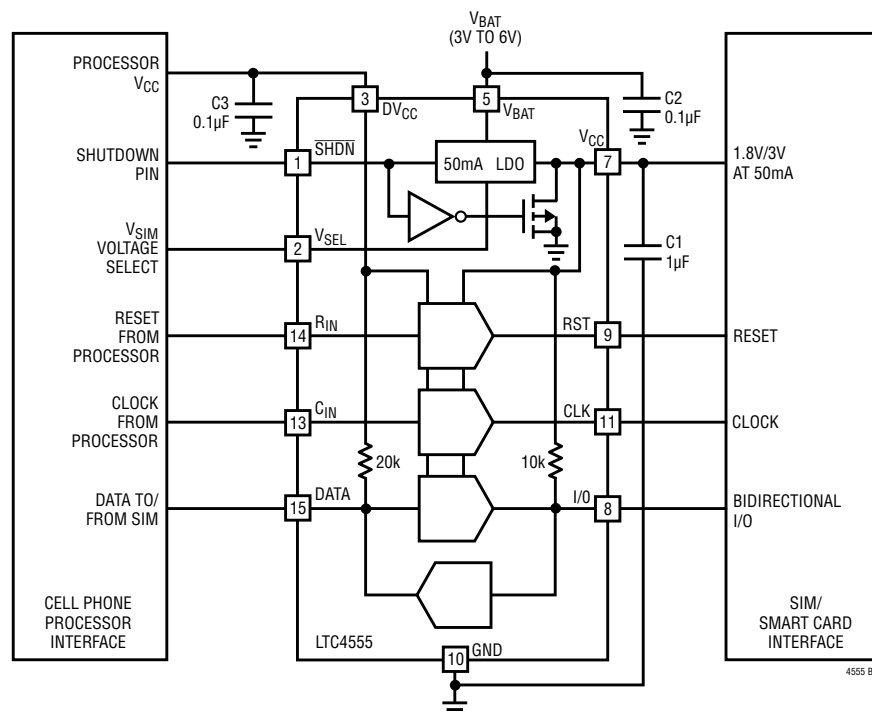

**C<sub>IN</sub> (Pin 13):** Clock Input from the Controller.

**R<sub>IN</sub> (Pin 14):** Reset Input from the Controller.

**DATA (Pin 15):** Controller Side Data I/O. This pin is used for bidirectional data transfer. The controller output must be an open-drain configuration. The open-drain output must be capable of sinking greater than 1mA.

**Exposed Pad (Pin 17):** GND. Must be soldered to PCB.

## BLOCK DIAGRAM

## APPLICATIONS INFORMATION

The LTC4555 provides both regulated power and internal level translators to allow low voltage controllers to interface with 1.8V or 3V SIMs or smart cards. The part meets all ETSI, IMT-2000 and ISO7816 requirements for SIM and smart card interfaces.

### V<sub>CC</sub> Voltage Regulator

The V<sub>CC</sub> voltage regulator is a 50mA low dropout (LDO) regulator with a digitally selected 1.8V or 3V output.

The output voltage is selected via the V<sub>SEL</sub> pin. The output is internally current limited and is capable of surviving an indefinite short to GND.

The V<sub>CC</sub> output should be bypassed with a 1µF capacitor. The LTC4555 can use either a low ESR ceramic capacitor or a tantalum electrolytic capacitor on the V<sub>CC</sub> pin, with no special ESR requirements.

V<sub>BAT</sub> should be bypassed with a 0.1µF ceramic capacitor.

### Level Translators

All SIMs and smart cards contain a clock input, a reset input and a bidirectional data input/output. The LTC4555

provides level translators to allow controllers to communicate with the SIM. The CLK and RST lines to the SIM are level shifted from the controller supply (GND to DV<sub>CC</sub>) to the SIM supply (GND to V<sub>CC</sub>). The data input to the SIM requires an open-drain output on the controller. On-chip pull-up resistors are provided for both the DATA and I/O lines.

### Shutdown Modes

The LTC4555 enters a low current shutdown mode by pulling the SHDN pin low. The SHDN pin is an active low input that the controller can use to directly shut down the part.

### ESD Protection

All pins that connect to the SIM/smart card will withstand 14kV of human body model ESD. In order to ensure proper ESD protection, careful board layout is required. The GND pin should be tied directly to a GND plane. The V<sub>CC</sub> capacitor should be located very close to the V<sub>CC</sub> pin and tied directly to the GND plane.

## PACKAGE DESCRIPTION

Please refer to <http://www.linear.com/product/LTC4555#packaging> for the most recent package drawings.

**UD Package**  
**16-Lead Plastic QFN (3mm × 3mm)**  
 (Reference LTC DWG # 05-08-1691 Rev 0)

RECOMMENDED SOLDER PAD PITCH AND DIMENSIONS

- NOTE:
1. DRAWING CONFORMS TO JEDEC PACKAGE OUTLINE MO-220 VARIATION (WEED-2)
  2. DRAWING NOT TO SCALE
  3. ALL DIMENSIONS ARE IN MILLIMETERS
  4. DIMENSIONS OF EXPOSED PAD ON BOTTOM OF PACKAGE DO NOT INCLUDE MOLD FLASH. MOLD FLASH, IF PRESENT, SHALL NOT EXCEED 0.15mm ON ANY SIDE
  5. EXPOSED PAD SHALL BE SOLDER PLATED
  6. SHADED AREA IS ONLY A REFERENCE FOR PIN 1 LOCATION ON THE TOP AND BOTTOM OF PACKAGE
