NOTE: 1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve.

- 2. The Iv guarantee should be added  $\pm 15\%$  tolerance.
- 3. Iv classification code is marked on each packing bag.
- 4.  $\theta$  1/2 is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
- 5. The chromaticity coordinates (x, y) is derived from the 1931 CIE chromaticity diagram.
- 6. Precautions in handling:
  - When soldering, leave 2mm of minimum clearance from the resin to the soldering point.
  - Dipping the resin to solder must be avoided.
  - Correcting the soldered position after soldering must be avoided.
  - In soldering, do not apply any stress to the lead frame particularly when heated.
  - Lead forming must be done before soldering.
  - It is necessary to cut the lead frame at normal temperature.

### 7. Caution in ESD:

Static Electricity and surge damages the LED. It is recommend to use a wrist band or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

- 8. Tester
  - PR704 is for the chromaticity coordinates (x, y).
  - EG&G is for Iv.
