

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LV5230LG

Bi-CMOS IC

7ch×17ch LED Driver

Overview

The LV5230LG is a dot-matrix LED driver IC for cell phones.

Features

- 7×17 dot-matrix LED driver
(5×15 dot-matrix supported)
- Each dot can be set for display over the serial bus.

Functions

- LED driver
 - Column (anode) driving P-channel driver × 17 channels
 - Row (cathode) driving N-channel driver × 7 channels
 - LED current per dot : 25mA maximum
 - Two flames of 7×17 (5×15) patterns can be set.
 - 7 grayscale level adjustment on a dot basis (PWM duty factor switching)
 - Reverse display
 - Horizontal scroll (1 frame/2 frames)
 - Continuous/single scroll selectable
 - Vertical scroll (1 frame/2 frames)
 - Continuous/single scroll selectable
 - Automatic flashing can be specified per each dot
 - Interrupt output at the end of scroll
 - Ring tone synchronization function
- LED driving open drain output × 2

LV5230LG

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V _{CC} max1	SV _{CC} , V _{DD}	5.5	V
	V _{CC} max2	LEDV _{DD}	6	V
Allowable power dissipation	Pd max	Mounted on a board *	1.2	W
Operating temperature	Topr		-30 to +85	°C
Storage temperature	Tstg		-40 to +125	°C

* Designated board : 40mm×50mm×0.8mm, glass epoxy 4-layer board (2S2P)

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Operating Conditions at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage 1	V _{BAT}	SV _{CC}	3 to 4.5	V
Supply voltage 2	V _{DD}	V _{DD}	1.65 to 3	V
Supply voltage 3	VLEDV _{DD}	LEDV _{DD}	2.7 to 5.5	V

* Power application sequence : 1. V_{BAT} 2. V_{DD} V_{BAT} > V_{DD}, No restriction on VLEDV_{DD}.

* Same level of voltage LEDV_{CC} must be applied to the 4 pins as VLEDV_{DD} voltage.

Electrical Characteristics, Analog Block Ta = 25°C, V_{BAT} = 3.7V, V_{DD} = 2.6V, LEDV_{DD} = 3.7V, unless otherwise specified

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Consumption current (SV_{CC}+V_{DD}+LEDV_{DD})						
Consumption current 1	I _{CC} 1	RESET : L		0	5	μA
Consumption current 2	I _{CC} 2	RESET : H, serial default		0.3	5	μA

Pin Functions

Pin No.	Pin name	Pin Description	Equivalent Circuit
A1	TEST	Test signal input pin. Be sure to connect the pin to GND.	
A2	RT	Reference current setting resistor connection pin. By connecting the external resistor between this pin and GND, the reference current is generated. The pin voltage is about 0.61V. Change of this current value enables change of the oscillation frequency and LED driver current value (COL1 to COL17 only).	
A3 A6 B1 B2 B4 B5 C2	ROW4 ROW7 ROW2 ROW3 ROW5 ROW6 ROW1	N-channel driver output pins 1 to 7 for row (cathode) drive. Must be connected to GND when not to be used.	
A4	LEDGND3	ROW SW GND.	
A5	LEDGND4	ROW SW GND.	
A7 G1 G7	NC	No connection.	
B3	LEDGND2	ROW SW GND.	
B6 C6	LEDO1 LEDO2	Open drain output pins for LED drive. Must be connected to GND when not to be used.	
B7	LEDGND5	GND pin dedicated for LEDO1 and LEDO2.	
C1	LEDGND1	ROW SW GND.	
C3	V _{DD}	Power supply for serial I/F.	
C4	INTO	Interrupt signal output pin.	

Continued on next page.

Serial Bus Communication Specifications

I²C serial transfer timing conditions

Standard mode

Parameter	symbol	Conditions	min	typ	max	unit
SCL clock frequency	fscl	SCL clock frequency	0		100	kHz
Data set up time	ts1	SCL setup time relative to the fall of SDA	4.7			μ s
	ts2	SDA setup time relative to the rise of SCL	250			ns
	ts3	SCL setup time relative to the rise of SDA	4.0			μ s
Data hold time	th1	SCL data hold time relative to the fall of SDA	4.0			μ s
	th2	SDA hold time relative to the fall of SCL	0			μ s
Pulse width	twL	SCL pulse width for the L period	4.7			μ s
	twH	SCL pulse width for the H period	4.0			μ s
Input waveform conditions	ton	SCL and SDA (input) rise time			1000	ns
	tof	SCL and SDA (input) fall time			300	ns
Bus free time	tbuf	Time between STOP and START conditions	4.7			μ s

High-speed mode

Parameter	Symbol	Conditions	min	typ	max	unit
SCL clock frequency	fscl	SCL clock frequency	0		400	kHz
Data setup time	ts1	SCL setup time relative to the fall of SDA	0.6			μ s
	ts2	SDA setup time relative to the rise of SCL	100			ns
	ts3	SCL setup time relative to the rise of SDA	0.6			μ s
Data hold time	th1	SCL data hold time relative to the fall of SDA	0.6			μ s
	th2	SDA hold time relative to the fall of SCL	0			μ s
Pulse width	twL	SCL pulse width for the L period	1.3			μ s
	twH	SCL pulse width for the H period	0.6			μ s
Input waveform conditions	ton	SCL and SDA (input) rise time			300	ns
	tof	SCL and SDA (input) fall time			300	ns
Bus free time	tbuf	Time between STOP and START conditions	1.3			μ s

I²C bus transmission method

Start and stop conditions

In the I²C bus, SDA must basically be kept in the constant state while SCL is "H" as shown below during data transfer.

When data transfer is not made, both SCL and SDA are in the "H" state.

When SCL = SDA = "H", change of SDA from "H" to "L" enables the start conditions to start access.

When SCL is "H", change of SDA from "L" to "H" enables the stop conditions to stop access.

Data transfer and acknowledgement response

After establishment of start conditions, data transfer is made by one byte (8 bits).

Data transfer enables continuous transfer of any number of bytes.

Each time the 8-bit data is transferred, the ACK signal is sent from the receive side to the send side.

The ACK signal is issued when SDA on the send side is released and SDA on the receive side is set "L" immediately after fall of the clock pulse at the SCL eighth bit of data transfer to "L".

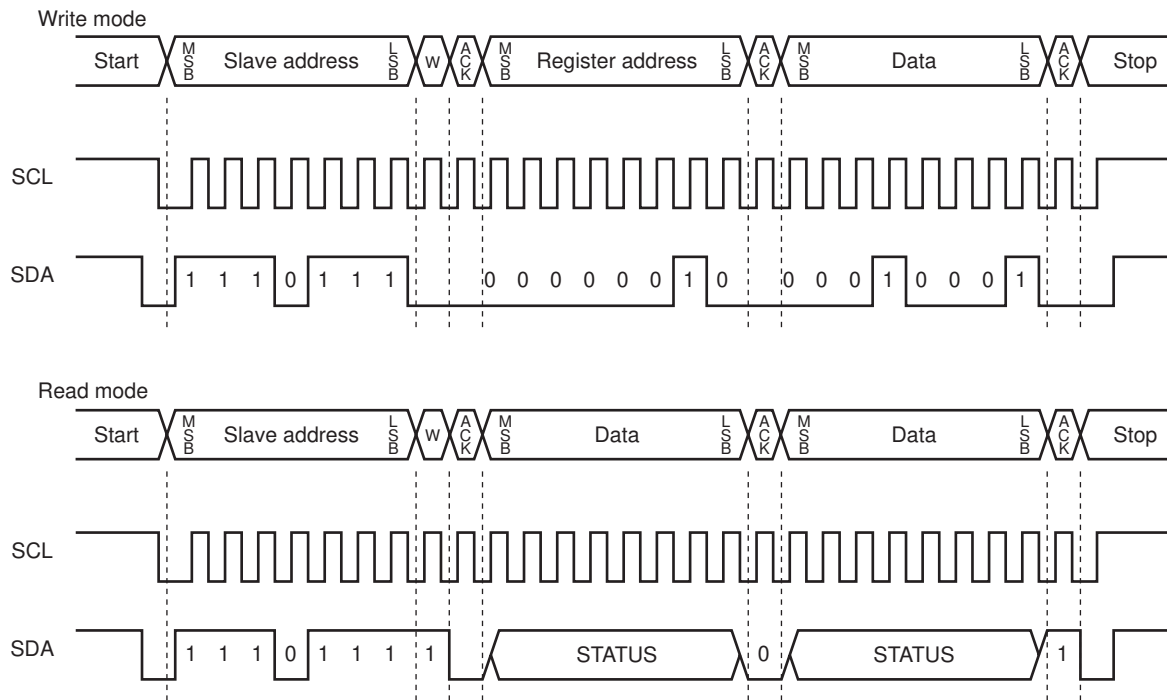

When the next 1-byte transfer is left in the receive state after transmission of the ACK signal from the receive side, the receive side releases SDA at fall of the SCL ninth clock.

In the I²C bus, there is no CE signal. Instead, 7-bit slave address is assigned to each device and the first byte of transfer is assigned to the command (R/W) representing the 7-bit slave address and subsequent transfer direction.

The 7-bit address is transferred sequentially from MSB and if the eighth bit is "L", the second byte is WRITE mode and if "H", the second byte is READ mode.

In the READ mode, the ACK signal issued immediately before sending the stop condition must be 1.

In LV5230, the slave address is specified as (1110111).
