Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LV56841PVD

Bi-CDMOS LSI

ON Semiconductor®

http://onsemi.com

For Car Audio Systems
Multi-Power Supply IC

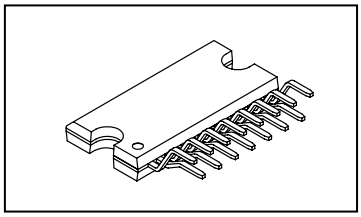
Overview

The LV56841PVD is a power supply IC suitable for CD receiver system for car audio system.
This IC integrates 5 systems of regulator output, 2 systems of high side power switch, over-current protector, overvoltage protector and over-heat protector .
Supply for SW33V outputs is low voltage specification, which enables drastic reduction of power dissipation compared to the existing model. (the package is HZIP15).

Function

- Low consumption current: 50μA (typ, only V_{DD} output is in operation)
- 5 systems of regulator output
  - V_{DD} for microcontroller: output voltage: 3.3V, maximum output current: 350mA
    Reverse current protection implemented.
  - For system: output voltage: 3.3V, maximum output current: 350mA
  - For audio: output voltage: 5 to 12V (set by external resistors), maximum output current: 300mA
  - For illumination: output voltage: 5 to 12V (set by external resistors), maximum output current: 300mA
  - For CD: output voltage: 6V, maximum output current: 1500mA
- 2 lines of high side switch with interlock V_{CC}
  - EXT: Maximum output current: 500mA, voltage difference between input and output: 0.75V
  - ANT: Maximum output current: 300mA, voltage difference between input and output: 0.5V
- Supply input
  - V6IN: 6V for system (SW33V)
  - $V_{CC}1$: For internal reference voltage, control circuits, and V_{DD} output.
  - $V_{CC}2$: For AUDIO, illumination, CD, EXT/ANT
- Over-current protector
- Overvoltage protector(OVP): $V_{CC}1$,$V_{CC}2$ Typ 21V (All outputs except V_{DD} are turned off)
  Overvoltage shutdown(OVS): V6IN Typ 21V (All outputs except V_{DD} are turned off)
- Overheat protector: Typ 175°C
- Pch-LDMOS is used in power output block

(Warning) The protector functions only improve the IC's tolerance and they do not guarantee the safety of the IC if used under the conditions out of safety range or ratings. Use of the IC such as use under over-current protection range, thermal shutdown state or V6IN OVS condition may degrade the IC's reliability and eventually damage the IC.



HZIP15

ORDERING INFORMATION

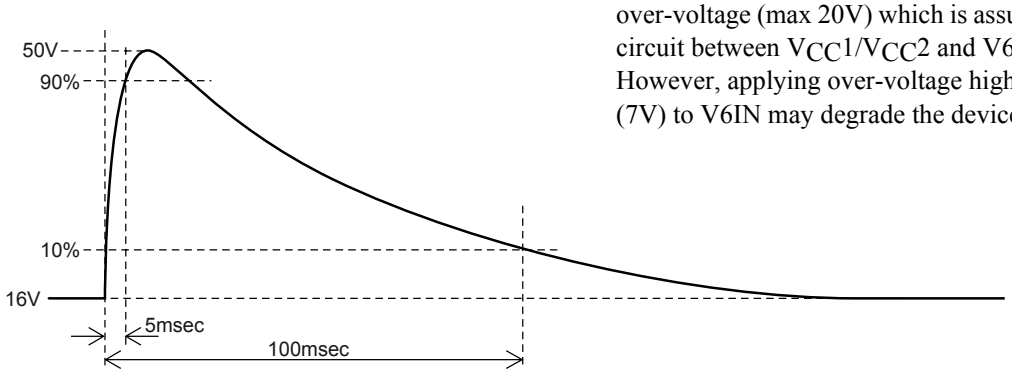
See detailed ordering and shipping information on page 15 of this data sheet.

Absolute Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions		Ratings	Unit
Supply voltage	V_{CC} max	$V_{CC}1$, $V_{CC}2$		36	V
	V6IN max	V6IN (*)		7	V
Input voltage	V_{IN} max	CTRL1, CTRL2		7	V
Allowable power dissipation	Pd max	-Independent IC	Ta ≤ 25°C	1.3	W
		Al heat sink *		5.3	W
		-Size of heatsink: infinite		26	W
Peak supply voltage	V_{CC} peak	See the appendix for waveform.		50	V
Operating ambient temperature	Topr			-40 to +85	°C
Storage temperature	Tstg			-55 to +150	°C
Junction temperature	Tj max			150	°C

* : When the Aluminum heat sink (50mm × 50mm × 1.5mm) is used

Waveform of surge test ($V_{CC}1$, $V_{CC}2$)



*V6IN is designed to tolerant toward short period of over-voltage (max 20V) which is assumed in condition of short circuit between $V_{CC}1$/$V_{CC}2$ and V6IN.
However, applying over-voltage higher than maximum rating (7V) to V6IN may degrade the device reliability

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Recommended Operating range at Ta = 25°C

$V_{CC}1$

Parameter	Conditions	Ratings	Unit
Operating supply voltage 1	V_{DD} output	7 to 16	V

$V_{CC}2$

Parameter	Conditions	Ratings	Unit
Operating supply voltage 2	ILM output (10V)	12 to 16	V
	ILM output (8V)	10 to 16	V
Operating supply voltage 3	AUDIO output (9V)	10 to 16	V
	AUDIO output (5V)	8 to 16	V
Operating supply voltage 4	CD output (I_O = 1.3A)	10.5 to 16	V
	CD output (I_O ≤ 1A)	10 to 16	V
Operating supply voltage 5	EXT output, ANT output	10 to 16	V

V6IN

Parameter	Conditions	Ratings	Unit
Operating supply voltage 6	SW33V output	5.5 to 6.5	V

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

Electrical Characteristics : $V_{CC}1 = V_{CC}2 = 14.4V$, V6IN = 6V at Ta = 25°C (*1)

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Quiescent current	I_{CC}	V_{DD} w/out load, CTRL1/2 = "L/L"		50	100	μA

Output voltage	V_O7	I_O7 = 300mA	$V_{CC}2$-1.0	$V_{CC}2$-0.5		V
Output current	I_O7	$V_O7 \geq V_{CC}2$-1.0	300			mA

*1 : All the specification is defined based on the tests performed under the conditions where Tj and Ta (= 25°C) are almost equal. These tests were performed with pulse load to minimize the increase of junction temperature (Tj).

*2 : guaranteed by design

*3 : Using resistors of tolerance within 1%.

*4 : When the output current is over "Ilim5", the over-current protector circuit operates. The over-current protector circuit is "fold-back" type, and it limits the output current and voltage when it's operating. The output current should be usually limited below Iomax that is "min of Io5" .

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

CTRL logic truth table

CTRL1	ANT	ILM	EXT
H	ON	ON	ON
M2	ON	OFF	ON
M1	OFF	ON	ON
L	OFF	OFF	OFF

CTRL2	AUDIO	SW33V	CD
H	ON	ON	ON
M2	OFF	ON	ON
M1	OFF	OFF	ON
L	OFF	OFF	OFF

(Warning) Usage of CTRL pin

When CTRL pin transits between L and M2, since it passes M1, ILM is turned on for a moment. Likewise, when CTRL pin transits between H and M1, since it passes M2, ILM is turned off for a moment.

To avoid operation failure by the above factors, please refer (1) and (2) as shown below for precaution.dd

- Do not connect parasitic capacitor to CTRL as much as possible.
- If use of capacitor for CTRL is required, keep the resistance value as low as possible.
- Make sure that the output load capacitor has enough margin against the voltage fluctuation due to instantaneous ON/OFF.

(1) The time until a reaction occurs in output after from CTLR ON to OFF (typ)

OFF→ON time	27°C
CTRL1→ILM	6.0μsec

Due to quality fluctuation of ICs in manufacturing process, the above-mentioned time can be shorted by 10 to 20%.

(2)The time until output starts to react shifting from CTRL ON→OFF control :

ON→OFF time	27°C
CTRL1→ILM	2.3μsec

CTRL1/2 voltage range and threshold

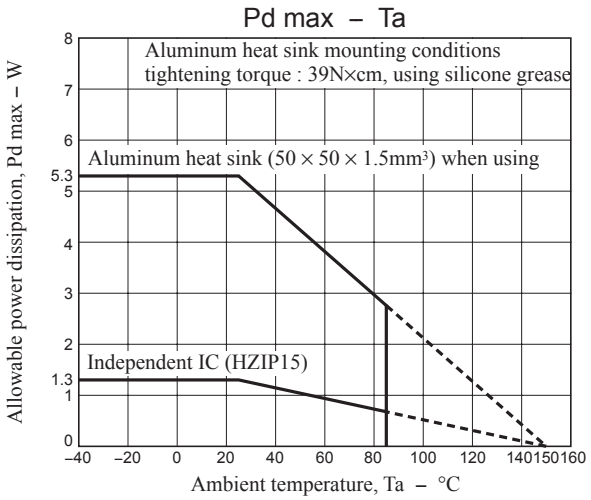
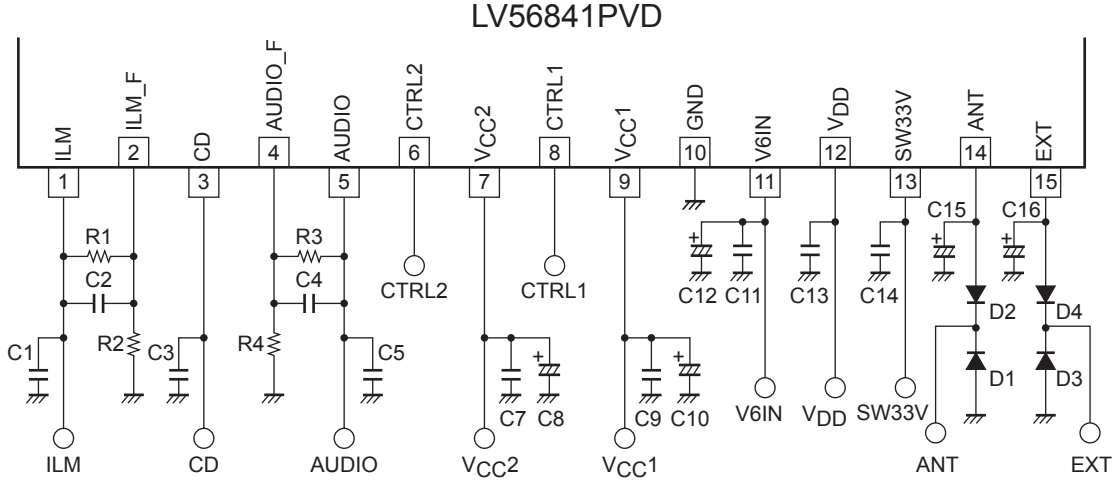
M = Month
DDD = Additional Traceability Data

*This information is generic. Please refer to device data sheet for actual part marking. Pb−Free indicator, “G” or microdot “ ▪”, may or may not be present.

• Allowable power dissipation derating curve



Application Circuit Example

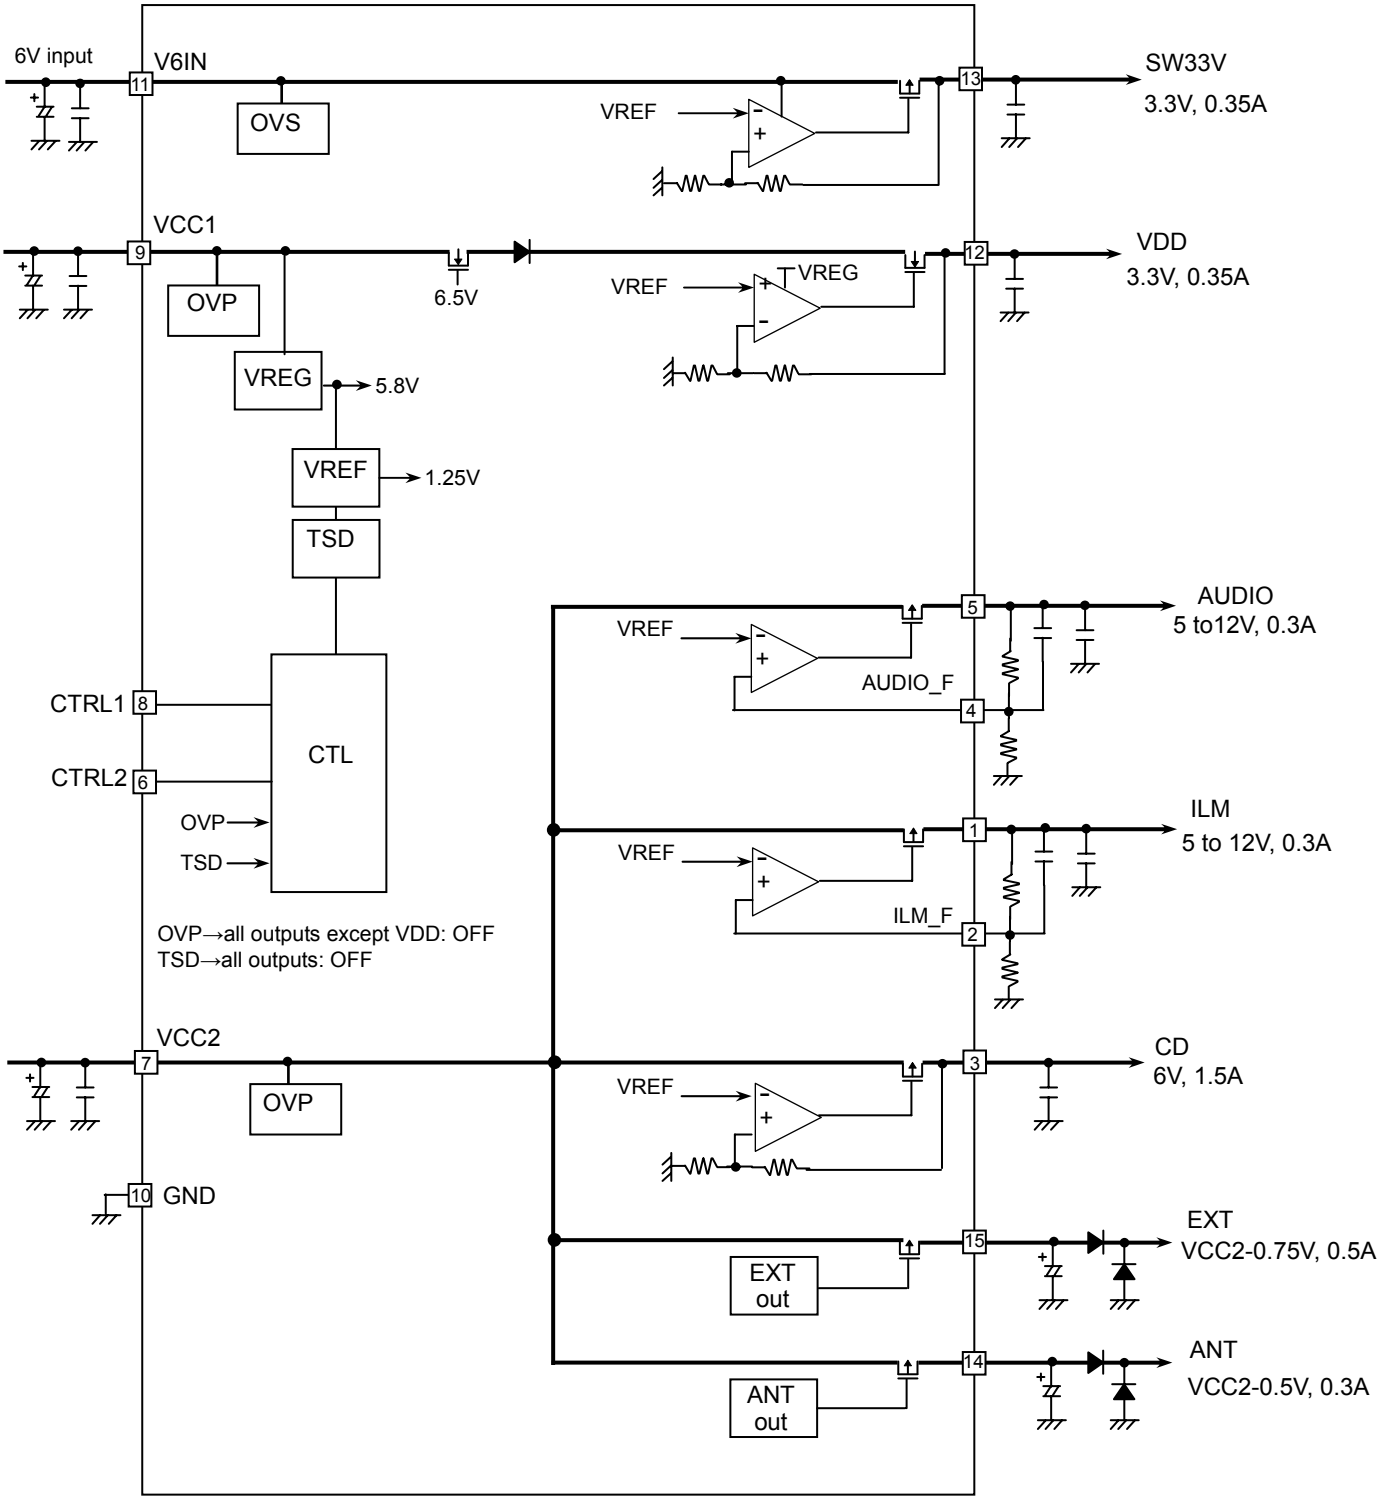


Peripheral parts

Part name	Description	Recommended value	Note
C1, C3, C5, C13, C14	output stabilization capacitor	greater than10μF (*1)	
C2, C4	output stabilization capacitor	0pF	Ceramic capacitor
C8, C10, C12	Capacitor for bypass power supply	C8: greater than 100μF C10,C12: greater than 47μF	Make sure to implement close to V_{CC} and GND.
C7, C9, C11	Capacitor for oscillation protector	greater than 0.22μF	
C15, C16	Capacitor for EXT/ANT output stabilization	greater than 2.2μF	
R1, R2	ILM voltage setting	R1/R2 43kΩ/5.1kΩ : V_O = 12V 56kΩ/7.5kΩ : V_O = 10.5V 30kΩ/5.6kΩ : V_O = 8V 30kΩ/10kΩ : V_O = 5V	Use resistors of tolerance within 1%
R3, R4	AUDIO voltage setting	R3/R4 30kΩ/10kΩ : V_O = 5V 30kΩ/5.6kΩ : V_O = 8.0V 27kΩ/4.7kΩ : V_O = 8.5V 24kΩ/3.9kΩ : V_O = 9V	Use resistors of tolerance within 1%
D1, D2, D3, D4	Internal device protector diode	ON Semiconductor SB1003M3	

(*1) Make sure that output capacitors are greater than 10uF and meets the condition of ESR = 0.001 to 10Ω , in which voltage/ temperature dependence and unit differences are taken into consideration. Moreover, in case of electrolytic capacitor, high-frequency characteristics should be sufficiently good.

Block Diagram



Pin Function

Pin No.	Pin name	Description	Equivalent Circuit

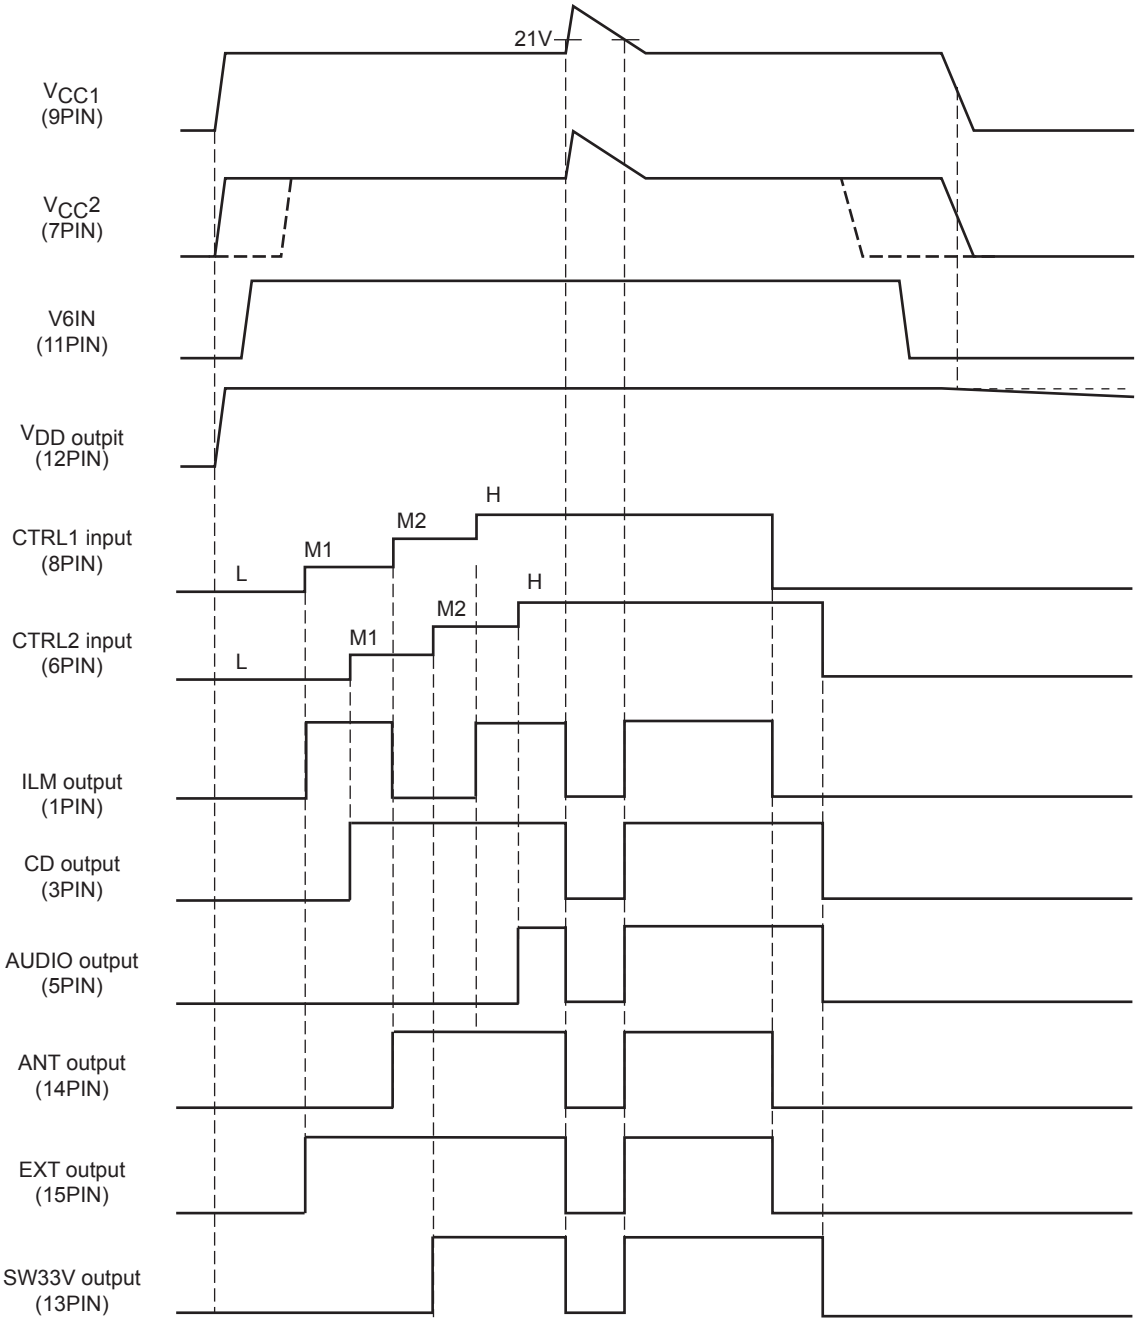
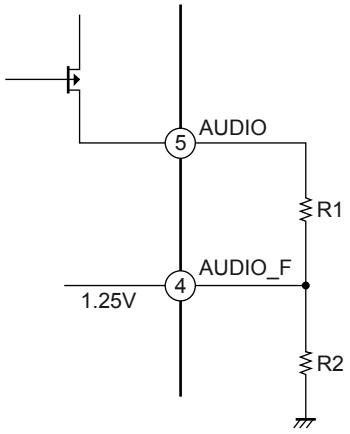
Timing Chart



Caution: The above values are obtained when typ.

• How to set AUDIO output voltage



AUDIO_F is determined by internal band-gap reference voltage (typ = 1.25V).

AUDIO output voltage expression

$$AUDIO = (\frac{R_1}{R_2} + 1) \times 1.25[V]$$

$$\frac{R_1}{R_2} = \frac{AUDIO}{1.25} - 1$$

Set the ratio of R1 and R2 to satisfy above expression.

(ex) AUDIO = 9V setting

$$\frac{R_1}{R_2} = \frac{9}{1.25} - 1 = 6.2$$

$$\frac{R_1}{R_2} = \frac{24k\Omega}{3.9k\Omega} \cong 6.15$$

$$AUDIO = (6.15 + 1) \times 1.25V \cong \boxed{8.94V}$$

• ILM output voltage is similarly calculated as AUDIO output.

(ex) ILM = 10.5V setting

$$\frac{R_1}{R_2} = \frac{10.5}{1.25} - 1 = 7.4$$

$$\frac{R_1}{R_2} = \frac{56k\Omega}{7.5k\Omega} \cong 7.46$$

$$ILM = (7.46 + 1) \times 1.25V \cong \boxed{10.575V}$$

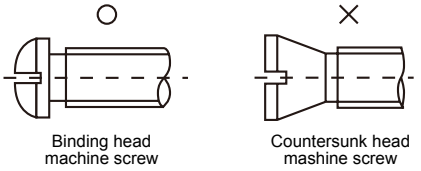
Note : The above values are typical values. These values have variation among the range of their tolerances.

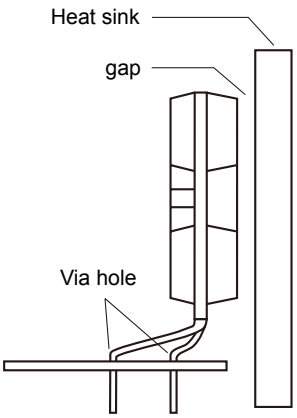
HZIP15 Heat sink attachment

Heat sinks are used to lower the semiconductor device junction temperature by leading the head generated by the device to the outer environment and dissipating that heat.

a. Unless otherwise specified, for power ICs with tabs and power ICs with attached heat sinks, solder must not be applied to the heat sink or tabs.

b. Heat sink attachment
- Use flat-head screws to attach heat sinks.
- Use also washer to protect the package.
- Use tightening torques in the ranges 39-59Ncm (4-6kgcm) .
- If tapping screws are used, do not use screws with a diameter larger than the holes in the semiconductor device itself.
- Do not make gap, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Take care a position of via hole .
- Do not allow dirt, dust, or other contaminants to get between the semiconductor device and the tab or heat sink.
- Verify that there are no press burrs or screw-hole burrs on the heat sink.
- Warping in heat sinks and printed circuit boards must be no more than 0.05 mm between screw holes, for either concave or convex warping.
- Twisting must be limited to under 0.05 mm.
- Heat sink and semiconductor device are mounted in parallel. Take care of electric or compressed air drivers
- The speed of these torque wrenches should never exceed 700 rpm, and should typically be about 400 rpm.





c. Silicone grease
- Spread the silicone grease evenly when mounting heat sinks.
- Recommends YG-6260 (Momentive Performance Materials Japan LLC)

d. Mount
- First mount the heat sink on the semiconductor device, and then mount that assembly on the printed circuit board.
- When attaching a heat sink after mounting a semiconductor device into the printed circuit board, when tightening up a heat sink with the screw, the mechanical stress which is impossible to the semiconductor device and the pin doesn't hang.

e. When mounting the semiconductor device to the heat sink using jigs, etc.,
- Take care not to allow the device to ride onto the jig or positioning dowel.
- Design the jig so that no unreasonable mechanical stress is applied to the semiconductor device.

f. Heat sink screw holes
- Be sure that chamfering and shear drop of heat sinks must not be larger than the diameter of screw head used.
- When using nuts, do not make the heat sink hole diameters larger than the diameter of the head of the screws used. A hole diameter about 15% larger than the diameter of the screw is desirable.
- When tap screws are used, be sure that the diameter of the holes in the heat sink are not too small. A diameter about 15% smaller than the diameter of the screw is desirable.

g. There is a method to mount the semiconductor device to the heat sink by using a spring band. But this method is not recommended because of possible displacement due to fluctuation of the spring force with time or vibration.
