

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# PanelMatch™ "A Series" LXMG1618A-12-4x

12V 4W CCFL Programmable Inverter Module

PRODUCTION DATASHEET

## DESCRIPTION

The LXMG1618A-12-4x™ is a Single Output 4W Direct Drive™ CCFL (Cold Cathode Fluorescent Lamp) Inverter Module designed for driving LCD backlight lamps. It is ideal for driving typically 8.4" to 12.1" panels.

The maximum output current is externally programmable over a range of 5 to 6.5mA in 0.5mA steps (PanelMatch) to allow the inverter to properly match to a wide array of LCD panel lamp current specifications. The modules include a dimming input that permits brightness control from a DC voltage source, a PWM signal or an external potentiometer.

LXMG1618A modules unlike the LXMG1617A series do not provide wide range 'burst' mode dimming, rather dimming is provided by amplitude control of the output current waveform, and this limits the potential dim range to typically less than 5:1.

The module converts a DC voltage

from the system battery, or AC adapter directly to high frequency, high-voltage waveform required to ignite and operate CCFL lamps. A 5V input inverter is also available (LXMG1618A-05-4x).

The LXMG1618A modules contain the newer highly integrated LX1691B CCFL backlight controller IC to provide a wider temperature range (-30°C to 80°C) compared to the existing solutions offered by Microsemi.

Other benefits of the inverter's topology include stable fixed-frequency operation, secondary-side strike voltage regulation and both open/shorted lamp protection with fault timeout.

The new LXMG1618A ("A Series") modules are designed therefore as a higher performance near drop-in replacement (see BRITE minimum input) for those customers and applications currently using the LXMG1618 inverters.

## KEY FEATURES

- Externally Programmable Maximum Output Current
- Easy to Use Brightness Control
- Output Short-Circuit Protection and Automatic Strike-Voltage Regulation and Timeout
- Analog Current Amplitude Dimming Method
- Fixed Frequency Operation
- Rated From -30°C to 80°C
- UL60950 E175910
- RoHS Compliant

## APPLICATIONS

- Medical Instrument Displays
- Portable Instrumentation
- Industrial Display Controls

## BENEFITS

- Programmable Output Current Allows Inverter to Mate with a Wide Variety of LCD Panel's Specifications
- Output Open Circuit Voltage Regulation Minimizes Corona Discharge For High Reliability

**IMPORTANT:** For the most current data, consult MICROSEMI's website: <http://www.microsemi.com>  
Protected By U.S. Patents: 5,923,129; 59320,121; 6,198,234; Patents Pending

## PACKAGE ORDER INFO

PART NUMBER	OUTPUT CONNECTOR	INVERTER MATES DIRECTLY TO PANEL CONNECTORS
LXMG1618A-12-41	JST SM02(8.0)B-BHS-1-TB (LF)(SN), Yeon Ho 20015WR-05A00 or equivalent	JST BHR-03VS-1
LXMG1618A-12-42	JST SM02B-BHSS-1-TB (LF)(SN), Yeon Ho 35001WR-02A00 or equivalent	JST BHSR-02VS-1

# PanelMatch™ "A Series" LXMG1618A-12-4x

12V 4W CCFL Programmable Inverter Module

PRODUCTION DATASHEET

## ABSOLUTE MAXIMUM RATINGS

Input Signal Voltage ( $V_{IN}$ )	-0.3V to 15V
Input Power	5.5W
Output Voltage, no load	Internally Limited to $1600V_{RMS}$
Output Current	$7.5mA_{RMS}$ (Internally Limited)
Output Power	4.0W
Input Signal Voltage ( $\overline{SLEEP}$ Input)	-0.3V to $V_{IN}$
Input Signal Voltage (BRITE)	-0.3V to 5.5V
Ambient Operating Temperature, zero airflow	-30°C to 80°C
Storage Temperature Range	-40°C to 85°C

Exceeding these ratings could cause damage to the device. All voltages are with respect to ground. Currents are positive into, negative out of specified terminal.

## RECOMMENDED OPERATING CONDITIONS (R.C.)

This module has been designed to operate over a wide range of input and output conditions. However, best efficiency and performance will be obtained if the module is operated under the condition listed in the 'R.C.' column. Min. and Max. columns indicate values beyond which the inverter, although operational, may not function optimally.

Parameter	Symbol	Recommended Operating Conditions			Units
		Min	R.C.	Max	
Input Supply Voltage Range (Fully Regulated Lamp Current)	$V_{IN}$	10.8	12	13.2	V
Input Supply Voltage Range (Functional)		10.2	12	13.8	
Output Power	$P_O$		3.5	4.0	W
Linear BRITE Control Input Voltage Range <sup>1</sup>	$V_{BRT\_ADJ}$	0		2.0	V
Lamp Operating Voltage	$V_{LAMP}$	465	550	635*	$V_{RMS}$
Lamp Current (Full Brightness)	$I_{O(LAMP)}$	5		6.5	$mA_{RMS}$
Operating Ambient Temperature Range	$T_A$	-30		80	°C

<sup>1</sup> The BRITE minimum input voltage level is 0V, whereas it is 0.65V in the original LXMG1618-12-4x inverter, see application info on page 5. The minimum  $V_{BRT\_ADJ}$  voltage depends on the panel characteristics and minimum lamp current specification, depending on the panel requirement it can vary from 0V to 0.5V

\* Total output power must not exceed 4W. Higher voltage lamps may require maximum output current to be set lower than  $6.5mA_{RMS}$

## ELECTRICAL CHARACTERISTICS

The following specifications apply over the recommended operating condition and ambient temperature of 0°C to 60°C except where otherwise noted.

Parameter	Symbol	Test Conditions	LXMG1618A-12-4x			Units
			Min	Typ	Max	
<b>OUTPUT PIN CHARACTERISTICS</b>						
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$ $I_{SET1} = \text{Ground}$ , $I_{SET2} = \text{Ground}$	4.5	5	5.5	$mA_{RMS}$
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$ $I_{SET1} = \text{Ground}$ , $I_{SET2} = \text{Open}$	5.0	5.5	6.0	$mA_{RMS}$
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$ $I_{SET1} = \text{Open}$ , $I_{SET2} = \text{Ground}$	5.5	6	6.5	$mA_{RMS}$
Full Bright Lamp Current	$I_{L(MAX)}$	$V_{BRT\_ADJ} \geq 2.0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$ $I_{SET1} = \text{Open}$ , $I_{SET2} = \text{Open}$	6.0	6.5	7.0	$mA_{RMS}$
Min. Average Lamp Current <sup>2</sup>	$I_{L(MIN)}$	$V_{BRT\_ADJ} = 0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$ $I_{SET1} = I_{SET2} = \text{Gnd}$		1.6		$mA_{RMS}$
Lamp Start Voltage	$V_{LS}$	-30°C < $T_A$ < 80°C, $V_{IN} > 10.8V$	1300	1400		$V_{RMS}$
Operating Frequency	$f_o$	$V_{BRT\_ADJ} = 2.0V$ , $SLEEP \geq 2.0V$ , $V_{IN} = 12V$	76	80	83	kHz

<sup>2</sup> The Inverter is capable of a lower output current than may be recommended by the panel manufacturer. It is the user's responsibility to set the minimum brightness (BRITE) input at or above the panel specification for minimum lamp current.

**ELECTRICAL CHARACTERISTICS (CONTINUED)**

The following specifications apply over the recommended operating condition and ambient temperature of 0°C to 60°C except where otherwise noted.

Parameter	Symbol	Test Conditions	LXMG1618A-12-4x			Units
			Min	Typ	Max	
<b>BRITE INPUT</b>						
Input Current	$I_{BRT}$	$V_{BRT\_ADJ} = 0V$ $V_{BRT\_ADJ} = 3V$		-9 0		$\mu A$ $\mu A$
Minimum Input for Max. Lamp Current	$V_{BRT\_ADJ}$	$I_{O(LAMP)} = \text{Maximum Lamp Current}$		1.8	2.0	V
Maximum Input for Min. Lamp Current <sup>3</sup>	$V_{BRT\_ADJ}$	$I_{O(LAMP)} = \text{Minimum Lamp Current}$	0			V
Minimum PWM Input Frequency	$F_{BRT\_PWM}$		2			kHz
<b>SLEEP BAR INPUT</b>						
RUN Mode	$V_{SLEEP}$		2.0			V
SLEEP Mode	$V_{SLEEP}$		-0.3		0.8	V
<b>SET<sub>1,2</sub> INPUT</b>						
SET <sub>1,2</sub> Low Threshold	$V_L$			0		V
Input Current	$I_{SET}$	$V_{SET} = 0V$		-270		$\mu A$
<b>POWER CHARACTERISTICS</b>						
Sleep Current	$I_{IN(MIN)}$	$V_{IN} = 12V, \overline{SLEEP} \leq 0.8V$		5	20	$\mu A$
Run Current	$I_{RUN}$	$V_{IN} = 12V, \overline{SLEEP} \geq 2.0V, I_{SET1} = \text{Open}$ $I_{SET2} = \text{Ground}, V_{LAMP} = 550V_{RMS}$		343		mA
Run Current Ripple Voltage	$I_{RIPPLE}$	$V_{IN} = 12V, \overline{SLEEP} \geq 2.0V, I_{SET1} = \text{Open}$ $I_{SET2} = \text{Ground}, V_{LAMP} = 550V_{RMS}$		330		mVpp
Typical Efficiency	$\eta$	$V_{IN} = 12V, \overline{SLEEP} \geq 2.0V, I_{SET1} = \text{Open}$ $I_{SET2} = \text{Ground}, V_{LAMP} = 550V_{RMS}$		85		%

<sup>3</sup> The BRITE minimum input voltage level is 0V, whereas it is 0.65V in the original LXMG1618-12-4x inverter.

**FUNCTIONAL PIN DESCRIPTION**

CONN	PIN	DESCRIPTION
<b>CN1</b> (Molex 53261-0871 or equivalent) Mates with 51021-0800 housing, 50079-8100 pins. Mates with LX9501G input cable assembly		
CN1-1	$V_{IN}$	Main Input Power Supply ( $10.8V \leq V_{IN} \leq 13.2V$ )
CN1-2		
CN1-3	GND	Power Supply Return
CN1-4		
CN1-5	$\overline{SLEEP}$	ON/OFF Control. ( $0V < \overline{SLEEP} \leq 0.8V = \text{OFF}, \overline{SLEEP} \geq 2.0V = \text{ON}$ )
CN1-6	BRITE	Brightness Control (0V to 2.0V). 2.0V gives maximum lamp current.
CN1-7	SET <sub>1</sub>	SET <sub>1</sub> MSB Connecting this pin to ground decreases the output current (see Table 1)
CN1-8	SET <sub>2</sub>	SET <sub>2</sub> LSB Connecting this pin to ground decreases the output current (see Table 1)
<b>CN2 for LXMG1618A-12-41 and -42</b> (JST SM02(8.0)B-BHS-1-TB(LF)(SN) ; Yeon Ho 20015WR-05A00 or SM02B-BHSS-1-TB(LF)(SN) ; Yeon Ho 35001WR-02A00) or equivalent		
CN2-1	$V_{HI}$	High voltage connection to high side of lamp. Connect to lamp terminal with shortest lead length. <b>DO NOT</b> connect to Ground.
CN2-2	$V_{LO}$	Connection to low side of lamp. Connect to lamp terminal with longer lead length. <b>DO NOT</b> connect to Ground

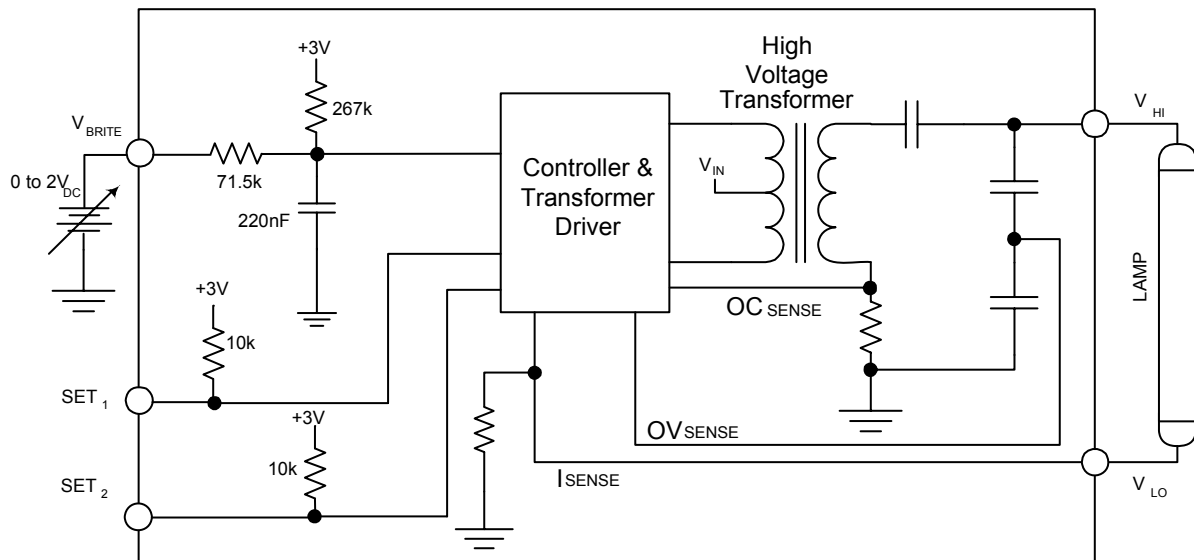

**TABLE 1 SETTING OUTPUT CURRENT**
**OUTPUT CURRENT SETTINGS**

SET <sub>1</sub> (Pin 7)	SET <sub>2</sub> (Pin 8)	Nominal Output Current
Open*	Open*	6.5mA
Open*	Ground	6.0mA
Ground	Open*	5.5mA
Ground	Ground	5.0mA

\* If driven by a logic signal it should be open collector or open drain only, not a voltage source.

**PHYSICAL DIMENSIONS**

**Warning**  
 High Voltage is present at high side of transformer, its core and the high side of the output connector, please provide at least 2 mm clearance (in all directions) on the component side of the board to any conductor when mounting

**SIMPLIFIED BLOCK DIAGRAM**

**TYPICAL APPLICATION**

**Figure 1** – Brightness Control  
(output current set to maximum)

**Figure 1A** – PWM Brightness Control

**Figure 2** – Max Output Current  
(SET<sub>1</sub> and SET<sub>2</sub> Inputs)

- The brightness control may be a voltage output DAC or other voltage source, a digital pot or 500K manual pot. The inverter contains effectively an internal 338k pull-up to 3V to bias the pot, if desired; add a resistor to set the lower threshold voltage above the absolute minimum dim level capability. A PWM logic level signal (figure 1A) may be used up to 5V; however the inverter will reach maximum current at less than 100% duty cycle. This can be calculated as approximately 2V divided by the logic high voltage level; with 3.3V logic level this corresponds to about 60% duty cycle for maximum lamp current.
- If you need to turn the inverter ON/OFF remotely, connect to TTL logic signal to the SLEEP input.
- Connect V<sub>HI</sub> to high voltage wire from the lamp. Connect V<sub>LO</sub> to the low voltage wire (wire with thinner insulation). Never connect V<sub>LO</sub> to circuit ground as this will defeat lamp current regulation. If both lamp wires have heavy high voltage insulation, connect the longest wire to V<sub>LO</sub>. This wire is typically white.
- Use the SET<sub>1</sub> and SET<sub>2</sub> (see Figure 2) inputs to select the desired maximum output current. Using these two pins in combination allows the inverter to match a wide variety of panels from different manufacturers. Generally the best lamp lifetime correlates with driving the CCFL at the manufacturer's nominal current setting. However the SET<sub>1</sub> and SET<sub>2</sub> inputs allow the user the flexibility to adjust the current to the maximum allowable output current to increase panel brightness at the expense of some reduced lamp life.
- Although the SET pins are designed such that just leaving them open or grounding them is all that is needed to set the output current, they can also be actively set. Using an open collector or open drain logic signal will allow you to reduce the lamp current for situations where greater dim range is required, as an example in nighttime situations. In conjunction with a light sensor or other timer the panel could be set to higher brightness (maximum output current) for daytime illumination and lower brightness (minimum or typical output current) at nighttime. Since the dim ratio is a factor of the peak output current, using this technique the effective dim ratio can be increased. Conversely, the SET inputs could be used to overdrive the lamp temporarily to facilitate faster lamp warm up at initial lamp turn on. Of course any possible degradation on lamp life from such practices is the user's responsibility since not all lamps are designed to be overdriven.
- The inverter has a built-in fault timeout function. If the output is open (lamp disconnected or broken) or shorted the inverter will attempt to strike the lamp up to about one second, after which (without success) the inverter will shutdown. Supply current draw in the shutdown mode is about 10mA. In order to restart the inverter it is necessary to toggle the sleep input or cycle the V<sub>IN</sub> input supply.

PanelMatch™ "A Series" LXMG1618A-12-4x

12V 4W CCFL Programmable Inverter Module
