

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

LuxiGen Multi-Color Emitter Series LZ4-Plus RGBW Emitter

LZ4-00MD0C

Key Features

- RGBW multi-channel surface mount ceramic LED package with integrated glass lens
- Individually addressable Red, Green, Blue and Daylight White die
- Thermal resistance of 1.1°C/W; 1.2A maximum current
- Small foot print 7.0mm x 7.0mm
- Electrically neutral thermal path
- JEDEC Level 1 for Moisture Sensitivity Level
- Lead (Pb) free and RoHS compliant
- Reflow solderable (up to 6 cycles)

Typical Applications

- Stage and Studio Lighting
- Effect Lighting
- Accent Lighting
- Display Lighting
- Architectural Lighting

Description

The LZ4-Plus RGBW emitter contains one red, green, blue and daylight white LED dies closely packed in a low thermal resistance package with integrated glass dome lens. LED Engin's RGBW LED offers ultimate design flexibility with individually addressable die. It is capable of producing a continuous spectrum of white light plus millions of colors. The patented design has unparalleled thermal and optical performance. The high quality materials used in the package are chosen to optimize light output and minimize stresses which results in monumental reliability and lumen maintenance. The robust product design thrives in outdoor applications with high ambient temperatures and high humidity.

Part number options

Base part number

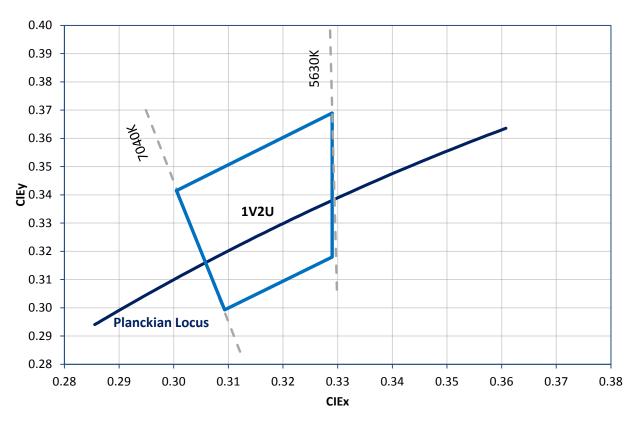

Part number	Description			
LZ4-00MD0C-xxxx	LZ4-Plus RGBW emitter			
LZ4-V0MD0C-xxxx	LZ4-Plus RGBW emitter on Star 4 channel Cu MCPCB			

Bin kit option codes

Min						
Kit number suffix	flux Bin	Color Bin Ranges	Description			
0000	17R	R2	Red, full distribution flux; full distribution wavelength			
	12G	G2 – G3	Green, full distribution flux; full distribution wavelength			
	17B	B06	Blue, full distribution flux; full distribution wavelength			
	PQ	1V2U	White full distribution flux and CCT			

Daylight White Chromaticity Groups

Standard Chromaticity Groups plotted on excerpt from the CIE 1931 (2°) x-y Chromaticity Diagram. Coordinates are listed below.

Daylight White Bin Coordinates

Bin Code	CIEx	CIEy
	0.3005	0.3415
	0.329	0.369
1V2U	0.329	0.318
	0.3093	0.2993
	0.3005	0.3415

Luminous Flux Bins

Table 1:

Bin Code		Minimum Luminous Flux (Φ_V) @ $I_F = 700$ mA ^[1,2] (Im)				Luminous @ I _F = 7	mum s Flux (Φ _V) 00mA ^[1,2] m)	
	Red	Green	Blue	White	Red	Green	Blue	White
17R	105				160			
12G		125				195		
17B			19				30	
18B			30				47	
PQ				182				285

Notes for Table 1

Dominant Wavelength Bins

Table 2:

Bin Code	Minimum Dominant Wavelength (λ _D) @ I _F = 700mA ^[1] (nm)			Maximum nant Wavelengt @ I _F = 700mA ^[1] (nm)			
	Red	Green	Blue	Red	Green	Blue	
R2	618			630			
G2		520			525		
G3		525			530		
B03			453			460	

Notes for Table 2:

Forward Voltage Bin

Table 3:

	Minimum Forward Voltage (V _F)								
Bin Code	@ I _F = 700mA ^[1] (V)		Forward Voltage (V _F) @ I _F = 700mA ^[1] (V)						
	Red	Green	Blue	White	Red	Green	Blue	White	
0	2.10	3.20	2.80	2.80	2.90	4.20	3.80	3.80	

Notes for Table 3:

^{1.} Luminous flux performance guaranteed within published operating conditions. LED Engin maintains a tolerance of ±10% on flux measurements.

^{2.} Future products will have even higher levels of radiant flux performance. Contact LED Engin Sales for updated information.

^{1.} LED Engin maintains a tolerance of ± 1.0nm on dominant wavelength measurements.

^{1.} LED Engin maintains a tolerance of \pm 0.04V on forward voltage measurements.

Absolute Maximum Ratings

Table 4:

Parameter	Symbol	Value	Unit
DC Forward Current (@T _J = 130°C) ^[1]	I _F	1200	mA
DC Forward Current (@T _J = 150°C) ^[1]	l _F	1000	mA
Peak Pulsed Forward Current ^[2]	I _{FP}	2000	mA
Reverse Voltage	V_R	See Note 3	V
Storage Temperature	T_{std}	-40 ~ +150	°C
Junction Temperature	Tj	150	°C
Soldering Temperature ^[4]	T_{sol}	260	°C
Allowable Reflow Cycles		6	

Notes for Table 4:

- 1. Maximum DC forward current is determined by the overall thermal resistance and ambient temperature. Follow the curves in Figure 11 for current derating.
- 2: Pulse forward current conditions: Pulse Width ≤ 10msec and Duty Cycle ≤ 10%.
- 3. LEDs are not designed to be reversing biased.
- 4. Solder conditions per JEDEC 020D. See Reflow Soldering Profile Figure 4.
- 5. LED Engin recommends taking reasonable precautions towards possible ESD damages and handling the emitter in an electrostatic protected area (EPA). An EPA may be adequately protected by ESD controls as outlined in ANSI/ESD S6.1.

Optical Characteristics @Tc = 25°C

Table 5:

Parameter	Symbol	Typical				Unit
raiametei	Зуппрог	Red	Green	Blue ^[1]	White	Onic
Luminous Flux (@ I _F = 700mA)	Фу	130	165	34	240	lm
Luminous Flux (@ $I_F = 1000$ mA)	Фу	180	215	44	315	lm
Luminous Flux (@ $I_F = 1200$ mA)	Ф۷	215	235	52	360	lm
Dominant Wavelength		623	523	460		
Correlated Color Temperature	ССТ				6500	K
Color Rendering Index (CRI)	Ra				75	
Viewing Angle ^[2]	20½		95			
Total Included Angle ^[3]	Θ _{0.9}		125	5		Degrees

Notes for Table 5:

- 1. When operating the Blue LED, observe IEC 60825-1 class 2 rating. Do not stare into the beam.
- 2. Viewing Angle is the off axis angle from emitter centerline where the luminous intensity is ½ of the peak value.
- 3. Total Included Angle is the total angle that includes 90% of the total luminous flux.

Electrical Characteristics $@T_C = 25^{\circ}C$

Table 6:

Parameter	Symbol	Typical				Unit
Farameter	Symbol	Red	Green	Blue	White	Offic
Forward Voltage (@ I _F = 700mA)	V _F	2.5	3.6	3.2	3.2	V
Temperature Coefficient of Forward Voltage	$\Delta V_F/\Delta T_J$	-1.9	-2.9	-2.0	-2.0	mV/°C
Thermal Resistance (Junction to Case)	$R\Theta_{J-C}$		1.	.1		°C/W

IPC/JEDEC Moisture Sensitivity Level

Table 7 - IPC/JEDEC J-STD-20D.1 MSL Classification:

Soak Requirements

	Floo	r Life	Stan	dard	Accel	erated
Level	Time	Conditions	Time (hrs)	Conditions	Time (hrs)	Conditions
1	Unlimited	≤ 30°C/ 85% RH	168 +5/-0	85°C/ 85% RH	n/a	n/a

Notes for Table 7:

Average Lumen Maintenance Projections

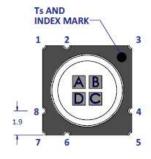

Lumen maintenance generally describes the ability of a lamp to retain its output over time. The useful lifetime for solid state lighting devices (Power LEDs) is also defined as Lumen Maintenance, with the percentage of the original light output remaining at a defined time period.

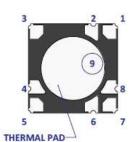

Based on long-term WHTOL testing, LED Engin projects that the LZ Series will deliver, on average, 70% Lumen Maintenance at 65,000 hours of operation at a forward current of 700mA. This projection is based on constant current operation with junction temperature maintained at or below 125°C for LZ4 product.

The standard soak time includes a default value of 24 hours for semiconductor manufacturer's exposure time (MET) between bake and bag and
includes the maximum time allowed out of the bag at the distributor's facility.

Mechanical Dimensions (mm)

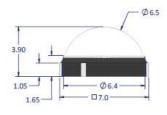

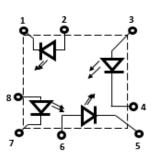

Figure 1: Package Outline Drawing

Pin Out Function Pad # Die Color Cathode White 2 Anode 3 В Anode В Cathode С Cathode С 6 Green Anode D 7 Blue Cathode 8 D Anode 9 [2] n/a Thermal

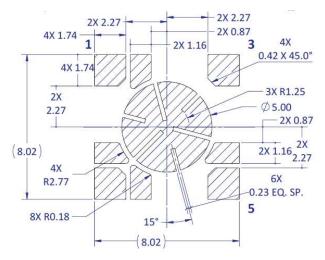

Notes for Figure 1:

- Unless otherwise noted, the tolerance = \pm 0.20 mm.
- Thermal contact, Pad 9, is electrically neutral.

Recommended Solder Pad Layout (mm)

Non-pedestal MCPCB Design

Pedestal MCPCB Design

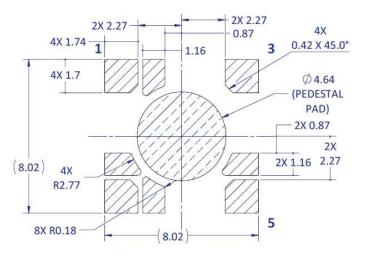

Figure 2a: Recommended solder pad layout for anode, cathode, and thermal pad for non-pedestal and pedestal design

Note for Figure 2a:

- Unless otherwise noted, the tolerance = ± 0.20 mm.
- Pedestal MCPCB allows the emitter thermal slug to be soldered directly to the metal core of the MCPCB. Such MCPCB eliminate the high thermal resistance dielectric layer that standard MCPCB technologies use in between the emitter thermal slug and the metal core of the MCPCB, thus lowering the overall system
- LED Engin recommends x-ray sample monitoring for solder voids underneath the emitter thermal slug. The total area covered by solder voids should be less than 20% of the total emitter thermal slug area. Excessive solder voids will increase the emitter to MCPCB thermal resistance and may lead to higher failure rates due to thermal over stress.

Current De-rating

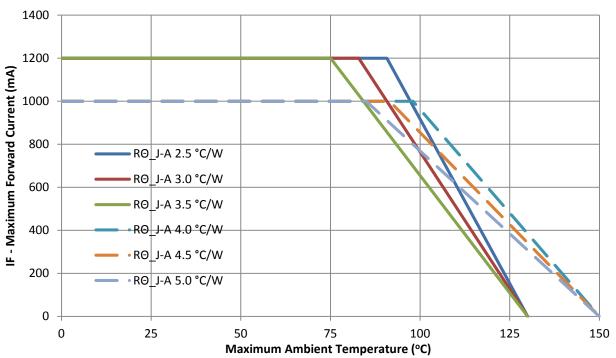

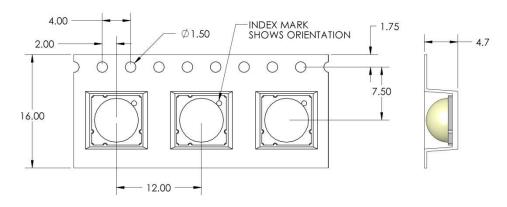

Figure 11: Maximum forward current vs. ambient temperature

Notes for Figure 11:

- 1. Maximum current assumes that all four LED dice are operating concurrently at the same current.
- 2. RO_{J-C} [Junction to Case Thermal Resistance] for LZ4-00MD0C is 1.1°C/W.
- 3. RO_{J-A} [Junction to Ambient Thermal Resistance] = RO_{J-C} + RO_{C-A} [Case to Ambient Thermal Resistance].

Emitter Tape and Reel Specifications (mm)

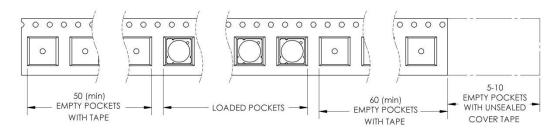

Figure 12: Emitter carrier tape specifications (mm).

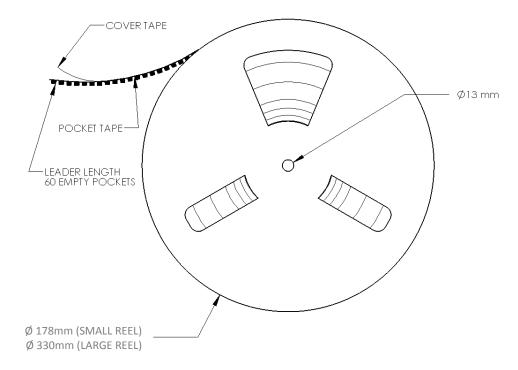

Figure 13: Emitter reel specifications (mm).

Notes for Figure 13:

- 1. Small reel quantity: up to 250 emitters
- 2. Large reel quantity: 250-1200 emitters.
- 3. Single flux bin and single wavelength bin per reel.

LZ4 MCPCB Family

Part number	Type of MCPCB	Diameter (mm)	Emitter + MCPCB Thermal Resistance (°C/W)	Typical V _f (V)	Typical I _f (mA)
LZ4-Vxxxxx	4-channel	19.9	1.1 + 0.1 = 1.2	2.5 – 3.6	700

Mechanical Mounting of MCPCB

- MCPCB bending should be avoided as it will cause mechanical stress on the emitter, which could lead to substrate cracking and subsequently LED dies cracking.
- To avoid MCPCB bending:
 - o Special attention needs to be paid to the flatness of the heat sink surface and the torque on the screws.
 - O Care must be taken when securing the board to the heat sink. This can be done by tightening three M3 screws (or #4-40) in steps and not all the way through at once. Using fewer than three screws will increase the likelihood of board bending.
 - o It is recommended to always use plastics washers in combinations with the three screws.
 - o If non-taped holes are used with self-tapping screws, it is advised to back out the screws slightly after tightening (with controlled torque) and then re-tighten the screws again.

Thermal interface material

- To properly transfer heat from LED emitter to heat sink, a thermally conductive material is required when mounting the MCPCB on to the heat sink.
- There are several varieties of such material: thermal paste, thermal pads, phase change materials and thermal epoxies. An example of such material is Electrolube EHTC.
- It is critical to verify the material's thermal resistance to be sufficient for the selected emitter and its operating conditions.

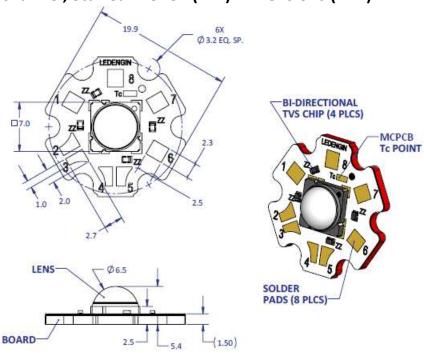

Wire soldering

- To ease soldering wire to MCPCB process, it is advised to preheat the MCPCB on a hot plate of 125-150°C. Subsequently, apply the solder and additional heat from the solder iron will initiate a good solder reflow. It is recommended to use a solder iron of more than 60W.
- It is advised to use lead-free, no-clean solder. For example: SN-96.5 AG-3.0 CU 0.5 #58/275 from Kester (pn: 24-7068-7601)

LZ4-Vxxxxx

4 channel, Star Cu MCPCB (4x1) Dimensions (mm)

Notes:

- Unless otherwise noted, the tolerance = ± 0.2 mm.
- Slots in MCPCB are for M3 or #4-40 mounting screws.
- LED Engin recommends plastic washers to electrically insulate screws from solder pads and electrical traces.
- LED Engin recommends using thermal interface material when attaching the MCPCB to a heatsink.
- \bullet The thermal resistance of the MCPCB is: ROC-B 0.1°C/W

Components used

MCPCB: MHE-301 copper (Rayben)

ESD/ TVS Diodes: BZT52C5V1LP-7 (Diodes, Inc., for 1 LED die)

VBUS05L1-DD1 (Vishay Semiconductors, for 1 LED die)

	Pad layout

Company Information

LED Engin, Inc., based in California's Silicon Valley, specializes in ultra-bright, ultra compact solid state lighting solutions allowing lighting designers & engineers the freedom to create uncompromised yet energy efficient lighting experiences. The LuxiGen™ Platform — an emitter and lens combination or integrated module solution, delivers superior flexibility in light output, ranging from 3W to 90W, a wide spectrum of available colors, including whites, multi-color and UV, and the ability to deliver upwards of 5,000 high quality lumens to a target. The small size combined with powerful output allows for a previously unobtainable freedom of design wherever high-flux density, directional light is required. LED Engin's packaging technologies lead the industry with products that feature lowest thermal resistance, highest flux density and consummate reliability, enabling compact and efficient solid state lighting solutions.

LED Engin is committed to providing products that conserve natural resources and reduce greenhouse emissions.

LED Engin reserves the right to make changes to improve performance without notice.
